SI PUBBLICA TUTTI I GIORNI MENO I FESTIVI

DIREZIONE E REDAZIONE PRESSO IL MINISTERO DI GRAZIA E GIUSTIZIA - UFFICIO PUBBLICAZIONE DELLE LEGGI E DECRETI - TELEFONO 6540139 Amministrazione presso l'istituto poligrafico dello stato - Libreria dello stato - Piazza Giuseppe verdi, 10 - 00100 roma - centralino 8508

DECRETO DEL PRESIDENTE DELLA REPUBBLICA 26 agosto 1977, n. 1093.

Esecuzione dell'accordo regionale, con allegati e protocollo, relativo all'utilizzazione da parte del servizio di radiodiffusione di alcune bande di frequenza, firmato a Ginevra il 22 novembre 1975 nel corso di una Conferenza dell'Unione internazionale delle telecomunicazioni.

LEGGI E DECRETI

DECRETO DEL PRESIDENTE DELLA REPUBBLICA 26 agosto 1977, n. 1093.

Esecuzione dell'accordo regionale, con allegati e protocollo, relativo all'utilizzazione da parte del servizio di radiodiffusione di alcune bande di frequenza, firmato a Ginevra il 22 novembre 1975 nel corso di una Conferenza dell'Unione internazionale delle telecomunicazioni.

IL PRESIDENTE DELLA REPUBBLICA

Visto l'art. 87 della Costituzione:

Sentito il Consiglio dei Ministri;

Sulla proposta del Ministro per gli affari esteri, di concerto con i Ministri per la difesa, per le poste e le telecomunicazioni e per la marina mercantile;

Decreta:

Articolo unico

Piena ed intera esecuzione è data a decorrere dalla sua entrata in vigore in conformità all'articolo 13, all'accordo regionale relativo all'utilizzazione da parte del servizio di radiodiffusione di
frequenze nelle bande delle onde ettometriche nelle regioni 1 e 3 e nelle bande delle onde chilometriche nella regione 1, con due allegati, un protocollo finale e tre protocolli addizionali, firmato
a Ginevra il 22 novembre 1975 nel corso della Conferenza amministrativa regionale di radiodiffusione dell'Unione internazionale delle telecomunicazioni.

Il presente decreto, munito del sigillo dello Stato, sarà inserto nella Raccolta ufficiale delle leggi e dei decreti della Repubblica italiana. E' fatto obbligo a chiunque spetti di osservarlo e di farlo osservare.

Dato a Roma, addì 26 agosto 1977

ACCORD RÉGIONAL

Relatif à l'utilisation par le service de radiodiffusion de fréquences dans les bandes des ondes hectométriques dans les Régions 1 et 3 et dans les bandes des ondes kilométriques dans la Région 1

Préambule

Afin de faciliter les relations, la compréhension mutuelle et la coopération dans le domaine de la radiodiffusion à ondes kilométriques et hectométriques;

en vue d'améliorer l'utilisation des bandes de fréquences attribuées au service de radiodiffusion et d'assurer ainsi une reception satisfaisante des émissions de ce service pour tous les pays;

reconnaissant que tous les pays, grands et petits, sont égaux en droits et que la mise en œuvre du présent Accord devra satisfaire au mieux les besoins de tous les pays, et en particulier les besoins des pays en voie de développement;

les délégués des Membres de l'Union internationale des télécommunications mentionnés ci-après, réunis à Genève pour une conférence administrative régionale convoquée conformément aux dispositions de la Convention internationale des télécommunications (Malaga-Torremolinos, 1973), ont adopté, sous réserve de l'approbation de leurs autorités compétentes respectives, les dispositions suivantes relatives au service de radiodiffusion dans les Régions 1 et 3 pour les bandes des ondes hectométriques et dans la Région 1 pour les bandes des ondes kilométriques:

République d'Afghanistan, Algérie (République Algérienne Démocratique et Populaire), République fédérale d'Allemagne, Royaume de l'Arabie Saoudite, Australie, Autriche, République Populaire du Bangladesh, Belgique, République Socialiste Soviétique de Biélorussie, République de Botswana, République Populaire de Bulgarie, République du Burundi, République Unie du Cameroun, République Centrafricaine, République Populaire de Chine, République de Chypre, Etat de la Cité du Vatican, République Populaire du Congo, République de Corée, République de Côte d'Ivoire, République du Dahomey, Danemark, République Arabe d'Egypte, Emirats Arabe Unis, Espagne, Ethiopie, Fidji, Finlande, France, République Gabonaise, République de Gambie, Ghana, Grèce, République de Guinée, République de Haute-Volta, République Populaire Hongroise, République de l'Inde, République d'Indonésie, Iran, Irlande, Islande, Etat d'Israël, Italie, Japon, Royaume Hachémite de Jordanie, République du Kenya, Etat de Koweit, Royaume de Lesotho, Liban, République du Libéria, République Arabe Libyenne, Principauté de Liechtenstein, Luxembourg, Malaisie, Malawi, République Malgache, République du Mali, Royaume du Maroc, Maurice, République Islamique de Mauritanie, Monaco, République Populaire de Mongolie, République Populaire du Mozambique, Népal, République du Niger, République Fédérale de Nigeria, Norvège, Nouvelle-Zélande, République de l'Ouganda, Pakistan, Papua-Nouvelle-Guinée, Royaume des Pays-Bas, République des Philippines, République Populaire de Pologne,

Portugal, Etat du Qatar, République Arabe Syrienne, République Démocratique Allemande, République Socialiste Soviétique d'Ukraine, République Socialiste de Roumanie, Royaume-Uni de Grande-Bretagne et d'Irlande du Nord, République du Sénégal, République de Singapour, République Démocratique du Soudan, République de Sri Lanka (Ceylan), Suède, Confédération Suisse, République Unie de Tanzanie, République du Tchad, République Socialiste Tchécoslovaque, Thaīlande, République Togolaise, Tunisie, Turquie, Union des Républiques Socialistes Soviétiques, République Arabe du Yémen, République Démocratique Populaire du Yémen, République Socialiste Fédérative de Yougoslavie, République du Zaīre, République de Zambie.

ARTICLE 1

Définitions

Dans la suite des présentes dispositions:

le terme Union désigne l'Union internationale des télécommunications;

le terme secrétaire général désigne le secrétaire général de l'Union;

le sigle I.F.R.B. désigne le Comité international d'enregistrement des fréquences;

le sigle C.C.I.R. désigne le Comité consultatif international des radiocommunications;

le terme Convention désigne la Convention internationale des télécommunications;

le terme Règlement désigne le Règlement des radiocommunications annexé à la Convention;

les termes Régions I et 3 désignent les zones geographiques définies au numero 126 et aux numéros 128 à 132 du Règlement des radiocommunications, Genève, 1959;

le terme Accord désigne l'ensemble constitué par le présent Accord et ses annexes;

le terme Plan désigne le plan et les appendices qui constituent l'annexe 1 au présent Accord;

le terme Membre contractant désigne tout Membre de l'Union ayant approuvé l'Accord ou y ayant adhéré;

le terme Administration désigne tout service ou département gouvernemental responsable des mesures à prendre pour exécuter les obligations de la Convention et du Règlement.

ARTICLE 2

Bandes de fréquences

Les dispositions du présent Accord s'appliquent aux bandes de fréquences comprises entre 150 et 285 kHz et entre 525 et 1 605 kHz attribuées au service de radiodiffusion selon l'article 5 du Règlement des radiocommunications, Genève, 1959.

ARTICLE 3

Exécution de l'Accord

1. Les Membres contractants adoptent, pour leurs stations de radiodiffusion fonctionnant dans les Régions 1 et 3 dans les bandes de fréquences faisant l'objet du présent Accord, les caractéristiques définies dans le Plan.

- 2. Les Membres contractants ne pourront procéder à la mise en service d'assignations conformes au Plan, modifier les caractéristiques techniques des stations spécifiées dans le Plan ou mettre en service de nouvelles stations, que dans les conditions indiquées aux articles 4 et 5 du présent Accord (voir également la Résolution N° 7).
- 3. Les Membres contractants s'engagent à étudier de concert les mesures nécessaires en vue de réduire les brouillages nuisibles qui pourraient résulter de la mise en application de l'Accord.

ARTICLE 4

Procédure relative aux modifications au Plan

- 1. Lorsqu'un Membre contractant se propose d'apporter une modification au Plan, c'est-à-dire:
 - soit de modifier les caractéristiques d'une assignation de fréquence à une station de radiodiffusion figurant dans le Plan, que cette station soit en service ou non;
 - soit de mettre en service une assignation de fréquence à une station de radiodiffusion ne figurant pas dans le Plan;
 - soit de modifier les caractéristiques d'une assignation de fréquence à une station de radiodiffusion pour laquelle la procédure du présent article a été appliquée avec succès, que cette station soit en service ou non;
 - soit d'annuler une assignation de fréquence à une station de radiodiffusion,

la procédure suivante est appliquée avant toute notification aux termes de l'Article 9 du Règlement* (voir l'article 5 du present Accord).

- 2. Dans la suite du présent article, l'expression «assignation conforme à l'Accord » désigne toute assignation de fréquence figurant dans le Plan ou pour laquelle la procédure dudit article a été appliquée avec succès.
- 3. Projets de modification des caractéristiques d'une assignation ou projets de mise en service d'une nouvelle assignation
- 3.1 Toute administration qui envisage la modification des caractéristiques d'une assignation ou la mise en service d'une nouvelle assignation recherche l'accord de toute autre administration dont une assignation conforme à l'Accord, dans le même canal ou dans un canal adjacent, est considérée comme étant défavorablement influencée (voir les paragraphes 3.2.5 et 3.3.1).
- 3.2 Canaux autres que les canaux pour émetteurs de faible puissance
- 3.2.1 Toute administration qui envisage la modification des caractéristiques d'une assignation ou la mise en service d'une nouvelle assignation en informe l'I.F.R.B. en lui communiquant les caractéristiques relatives à la modification ou à l'adjonction, sous la forme adoptée dans le Plan et ses appendices.
- 3.2.1.1 Lorsque la modification proposée est comprise dans les limites définies au paragraphe 3.2.9, il convient de faire référence audit paragraphe.
- 3.2.1.2 Dans les autres cas, afin de parvenir à l'accord prévu au paragraphe 3.1, l'administration communique a l'I.F.R.B. le nom des administrations avec lesquelles elle estime que l'accord doit être recherché, ainsi que le nom des administrations avec lesquelles un accord a déjà été conclu.
- 3.2.2 L'I.F.R.B. détermine, à l'aide de l'Annexe 2 à l'Accord, les administrations dont les assignations de fréquence conformes à l'Accord sont considérées comme étant défavorablement influencées au sens du paragraphe 3.2.5. L'I.F.R.B. communique immédiatement les résultats de ses calculs à l'administration qui se propose d'apporter la modification au Plan. L'I.F.R.B. inclut le nom de ces administrations dans les renseignements reçus et publie l'ensemble dans une section spéciale de sa circulaire hebdomadaire.

^{*} ou de l'article correspondant du Règlement des radiocommunications en vigueur.

- 3.2.3 L'I.F.R.B. adresse un télégramme aux administrations mentionnées dans la section spéciale de la circulaire hebdomadaire en attirant leur attention sur la publication de ces renseignements et leur communique le résultat de ses calculs.
- 3.2.4 Toute administration qui considère qu'elle aurait dû figurer dans la liste des administrations dont une assignation de fréquence est considérée comme étant défavorablement influencée peut demander, en en donnant les raisons, à l'I.F.R.B. de l'inclure dans cette liste. Une copie de la demande doit être envoyée à l'administration qui envisage la modification au Plan.
- 3.2.5 Toute assignation peut être considérée comme défavorablement influencée lorsque son champ utilisable se trouve augmenté d'une valeur égale ou supérieure à 0,5 dB du fait d'un projet de modification au Plan. Le champ utilisable est calculé en chaque point du contour de la zone de service qui résulte de l'assignation initialement inscrite dans le Plan; lorsque celle-ci a fait l'objet d'une modification conforme à l'Accord, le calcul tient compte de cette modification. L'augmentation du champ utilisable est calculée conformément à l'Annexe 2 à l'Accord.
- 3.2.6 Toute administration recherchant un accord aux termes du paragraphe 3.1 pour un horaire de fonctionnement d'une station limité aux heures de jour peut, par accord mutuel avec les administrations ayant des assignations défavorablement influencées, utiliser la méthode simplifiée de calcul définie aux paragraphes 3.3.4.3 ou 3.4.3.3, selon le cas, de l'Annexe 2 à l'Accord.
- 3.2.7 Toute administration peut demander à l'administration qui envisage la modification au Plan les renseignements supplémentaires qu'elle estime nécessaires pour calculer l'augmentation du champ utilisable. De même, l'administration qui envisage la modification au Plan peut demander à toute administration dont elle recherche l'accord les renseignements supplémentaires qu'elle estime nécessaires. Les administrations en informent l'I.F.R.B.
- 3.2.8 Les observations des administrations au sujet des renseignements publiés aux termes des dispositions du paragraphe 3.2.2 sont adressées soit directement à l'administration qui envisage la modification, soit par l'intermédiaire de l'I.F.R.B. Dans tous les cas, l'I.F.R.B. doit être informé que des observations ont été formulées.
- 3.2.9 L'accord prévu au paragraphe 3.1 n'est pas requis si la modification envisagée:
 - n'augmente dans aucune direction la puissance apparente rayonnée équivalente sur antenne verticale courte,
 - ou a pour objet un déplacement de la station compris dans les tolérances spécifiées dans le paragraphe 4.9 de l'Annexe 2 à l'Accord.

Dans ces deux cas, l'administration qui envisage la modification au Plan peut mettre son projet à exécution, sous réserve de l'application des dispositions de l'Article 9 du Règlement.

- 3.2.10 Toute administration n'ayant pas adressé ses observations à l'administration concernée, soit directement, soit par l'intermédiaire de l'I.F.R.B., dans un délai de seize semaines après la date de la circulaire hebdomadaire mentionnée au paragraphe 3.2.2, est réputée avoir donné son accord à la modification envisagée. Ce délai peut être prorogé de huit semaines pour l'administration qui demande des renseignements supplémentaires conformément aux dispositions du paragraphe 3.2.7.
- 3.2.11 Lorsque, pour parvenir à un accord, une administration est conduite à modifier son projet initial, elle applique à nouveau les dispositions du paragraphe 3.2.1 et les procédures qui en découlent.
- 3.2.12 Si aucune observation ne lui est parvenue dans les délais spécifiés au paragraphe 3.2.10, ou si un accord est intervenu avec les administrations ayant formulé des observations, l'Administration qui envisage la modification peut mettre son projet à exécution; elle en informe l'I.F.R.B. en lui indiquant les caractéristiques définitives de l'assignation ainsi que le nom des administrations avec lesquelles un accord a été conclu.
- 3.2.13 Lorsqu'un projet de modification au Plan intéresse un pays en voie de développement, les administrations recherchent toute solution permettant d'assurer le développement économique du système de radiodiffusion du pays en voie de développement, en tenant compte des principes énoncés à cet effet dans le Préambule de l'Accord.

ou de l'article correspondant du Règlement des radiocommunications en vigueur.

3.2.14 L'I.F.R.B. publie dans une section spéciale de sa circulaire hebdomadaire les renseignements qu'il reçoit aux termes du paragraphe 3.2.12, en les accompagnant, le cas échéant, du nom des administrations avec lesquelles les dispositions du présent article ont été appliquées avec succès. Vis-à-vis des Membres contractants, l'assignation bénéficiera du même statut que les assignations figurant dans le Plan.

3.3 Canaux pour émetteurs de faible puissance

- 3.3.1 Toute administration qui envisage la modification des caractéristiques d'une assignation de fréquence dans un canal pour émetteurs de faible puissance ou la mise en service d'une nouvelle station dans un tel canal recherche l'accord d'une autre administration lorsque la distance entre la station en projet et le point le plus proche des limites du territoire de cette autre administration est inférieure à la valeur limite correspondante indiquée dans le paragraphe 4.8.3 de l'Annexe 2 à l'Accord.
- 3.3.2 Après avoir obtenu l'accord des administrations intéressées, l'administration qui envisage la modification en informe l'I.F.R.B. et lui indique les caractéristiques de la station ainsi que le nom des administrations avec lesquelles un accord a été conclu.
- 3.3.3 L'I.F.R.B. publie ces renseignements dans une section spéciale de sa circulaire hebdomadaire. Vis-à-vis des Membres contractants, cette assignation bénéficiera du même statut que les assignations figurant dans le Plan.
- 3.3.4 L'administration peut alors mettre son projet à exécution.

3.4 Dispositions additionnelles pour les canaux dans les bandes partagées

Les dispositions du présent article s'appliquent également aux assignations de fréquence aux stations de radiodiffusion dans les bandes de fréquences partagées avec d'autres services de radiocommunication. Cependant, les sections spéciales de la circulaire hebdomadaire de l'I.F.R.B. mentionnées aux paragraphes 3.2.2 et 3.2.3 ne doivent être considérées, par ces autres services, qu'à titre d'information sur le projet en question (voir également la Résolution N° 7).

3.5 Dispositions communes à tous les canaux

- 3.5.1 Si aucun accord n'intervient entre les administrations intéressées, l'I.F.R.B. procède à toute étude que peuvent lui demander ces administrations; il les informe du résultat de cette étude et leur présente les recommandations qu'il peut formuler en vue de résoudre le problème.
- 3.5.2 Toute administration peut, à n'importe quel stade des procédures décrites ou avant d'appliquer ces procedures, demander l'aide de l'I.F.R.B., notamment dans la recherche de l'accord d'une autre administration.
- 3.5.3 Si, après la mise en œuvre de la procédure définie dans le présent article, aucun accord n'est intervenu entre les administrations intéressées, celles-ci peuvent recourir à la procédure définie à l'Article 50 de la Convention. Dans le cas où elles le décident d'un commun accord, les administrations peuvent aussi avoir recours au Protocole additionnel facultatif à la Convention.
- 3.5.4 En tout état de cause, les dispositions pertinentes de l'Article 9 du Règlement* seront appliquées lors de la notification des assignations. Dans le cas où un accord n'a pas pu être obtenu, l'I.F.R.B., à la suite de la notification, procède à une inscription dans le Fichier de référence international des fréquences en accompagnant cette inscription d'un symbole signifiant qu'elle est effectuée sous réserve de ne pas causer de brouillage nuisible à des assignations de fréquence conformes à l'Accord.
- 3.5.5 L'I.F.R.B. tiendra à jour un exemplaire de référence du Plan et de son Appendice 1 relatif aux canaux pour emetteurs de faible puissance; cet exemplaire tiendra compte de l'application de la procédure décrite dans le présent article; à cet effet, l'I.F.R.B. élaborera un document indiquant les amendements à apporter au Plan et à son Appendice 1 à la suite de modifications effectuées conformément à la procédure du présent article et d'adjonctions de nouvelles assignations conformes à l'Accord.

^{*} ou de l'article correspondant du Règlement des radiocommunications en vigueur.

3.5.6 Le secrétaire général sera informé par l'I.F.R.B. de toute modification apportée au Plan; il publiera sous une forme appropriée une version à jour du Plan lorsque les circonstances le justifieront et, en tous cas, tous les trois ans.

4. Annulation d'une assignation

Lorsqu'une assignation conforme à l'Accord est définitivement abandonnée, qu'il s'agisse ou non des consequences d'une modification (par exemple un changement de fréquence), l'administration intéressée en informe immédiatement l'I.F.R.B. Celui-ci publie ce renseignement dans une section spéciale de sa circulaire hebdomadaire.

ARTICLE 5

Notification des assignations de fréquence

- 1. Chaque fois qu'une administration se propose de mettre en service une assignation conforme à l'Accord, elle notifie cette assignation à l'I.F.R.B. conformément aux dispositions de l'Article 9 du Règlement*. Toute assignation de cette nature inscrite dans le Fichier de référence international des fréquences en conséquence de l'application des dispositions de l'Article 9 du Règlement*, porte, en plus d'une date inscrite dans la colonne 2a ou la colonne 2b, un symbole spécial dans la colonne Observations.
- 2. Pour autant qu'il s'agisse des relations entre les Membres contractants, toutes les assignations de fréquence mises en service conformément à l'Accord et inscrite dans le Fichier de référence seront considérées comme bénéficiant du même statut, quelle que soit la date inscrite dans la colonne 2a ou la colonne 2b en regard de chacune d'elles.

ARTICLE 6

Arrangements particuliers

En complément des procédures prévues à l'Article 4 de l'Accord et en vue de faciliter leur application pour ameliorer l'utilisation du Plan, les Membres contractants peuvent conclure des arrangements particuliers conformement aux dispositions de la Convention et du Règlement.

ARTICLE 7

Champ d'application de l'Accord

- 1. Le présent Accord engage les Membres contractants dans leurs rapports mutuels, mais ne les engage pas vis-a-vis des pays non contractants.
- 2. Si un Membre formule des réserves quant à l'application d'une disposition du présent Accord, les autres Membres ne sont pas tenus d'observer cette disposition dans leurs rapports avec le Membre qui a formulé les réserves.

ARTICLE 8

Approbation de l'Accord

Les Membres notifieront dès que possible leur approbation du présent Accord au secrétaire général, lequel en informera aussitôt les autres Membres de l'Union.

[•] ou de l'article correspondant du Règlement des radiocommunications en vigueur.

ARTICLE 9

Adhésion à l'Accord

- 1. Tout Membre de l'Union appartenant aux Régions 1 et 3 qui n'est pas signataire de l'Accord, peut y adhérer en tout temps. Cette adhésion s'étend au Plan tel qu'il est modifié au moment de l'adhésion et ne doit comporter aucune réserve. L'adhésion est notifiée au secrétaire général, lequel en informe les autres Membres de l'Union.
- 2. L'adhésion à l'Accord prend effet à la date à laquelle le secrétaire général en reçoit notification.
- 3. Tout Membre de l'Union partie à l'Accord régional pour la Zone africaine de radiodiffusion (Genève, 1966) qui adhère au présent Accord conformément aux paragraphes 1 et 2 du présent article cesse, par l'acte d'adhésion, d'être partie à l'Accord régional pour la Zone africaine de radiodiffusion et au Plan y annexé.

ARTICLE 10

Dénonciation de l'Accord

- 1. Tout Membre contractant peut dénoncer le présent Accord en tout temps, par notification adressée au secretaire général, lequel en informe les autres Membres de l'Union.
- 2. La dénonciation prend effet un an après la date à laquelle le secrétaire général en reçoit notification.

ARTICLE 11

Abrogation de la Convention européenne de radiodiffusion (Copenhague, 1948) et du Plan de Copenhague y annexé

Le Protocole additionnel I aux Actes finals de la Conférence porte abrogation de la Convention europeenne de radiodiffusion (Copenhague, 1948) et du Plan de Copenhague y annexé.

ARTICLE 12

Abrogation de l'Accord régional pour la Zone africaine de radiodiffusion (Genève, 1966) et du Plan y annexé

Le Protocole additionnel II aux Actes finals de la Conférence porte abrogation de l'Accord régional pour la Zone africaine de radiodiffusion (Genève, 1966) et du Plan y annexé.

ARTICLE 13

Entrée en vigueur de l'Accord

Le présent Accord entrera en vigueur le vingt-trois novembre mil neuf cent soixante-dix-huit à 0001 heure TMG.

ARTICLE 14

Durée de l'Accord

- 1. L'Accord et le Plan annexé ont été établis en vue de satisfaire les besoins des services de radiodiffusion dans les bandes concernées pour une période de 11 ans à partir de la date de mise en vigueur de l'Accord.
- 2. L'Accord demeurera en vigueur jusqu'à sa révision par une conférence compétente des Membres de l'Union appartenant aux Régions 1 et 3.

EN FOI DE QUOI, les délégués des Membres de l'Union mentionnés ci-dessus ont, au nom de leurs autorités compétentes respectives, signé le présent Accord en un seul exemplaire rédigé dans les langues anglaise, chinoise, espagnole, française et russe, le texte français faisant foi en cas de contestation. Cet exemplaire restera déposé dans les archives de l'Union. Le secrétaire général en remettra une copie certifiée conforme à chacun des Membres appartenant aux Régions 1 et 3.

ANNEXE 1

Plan d'assignations de fréquence aux stations de radiodiffusion dans les bandes des ondes hectométriques (à l'exception des stations utilisant les canaux pour émetteurs de faible puissance) dans les Régions 1 et 3 et dans les bandes des ondes kilométriques dans la Région 1

RENSEIGNEMENTS INCLUS DANS LES COLONNES DU PLAN

- Colonne 1 · Fréquence assignée du canal, en kHz.

 Numéro du canal; ce numéro est indiqué entre parenthèses.
- Colonne 2 : Nom de la station d'émission. Le symbole S figurant à gauche de la ligne pointillée indique que la station fait partie d'un réseau synchronisé dont les autres stations portent le même symbole (voir sous Définitions, Chapitre 1 de l'Annexe 2 à l'Accord régional).
- Colonne 3 : Symbole désignant le pays ou la zone géographique où est située la station (voir le Tableau N° 1 de la Préface à la Liste internationale des fréquences).
- Colonne 4 : Coordonnées géographiques de la station d'émission, en degrés et minutes.
- Colonne 5: Largeur de bande nécessaire, en kHz; la valeur en kHz est précédée du symbole A, B, C ou D qui indique le rapport de protection dans le canal adjacent à employer pour le calcul du champ utilisable. Les différents cas correspondant à ces symboles sont mentionnés dans le paragraphe 4.4.2 de l'Annexe 2 à l'Accord.
- Colonne 6: Puissance de l'onde porteuse, en kW.
- Colonne 7: Rayonnement maximal, en dB, par rapport à une f.c.m. de 300 V ou par rapport à une p.a.r.v. de 1 kW; ce rayonnement est déterminé à partir de la puissance nominale de l'émetteur et du gain théorique de l'antenne sans tenir compte des pertes diverses.
- Colonne 8 : Azimut de rayonnement maximal, en degrés à partir du Nord vrai, dans le sens des aiguilles d'une montre.
- Colonne 9 : Azimuts définissant le secleur à rayonnement limité, en degrés à partir du Nord vrai, dans le sens des aiguilles d'une montre.
- Colonne 10: Rayonnement maximal admis dans le secteur, en dB, par rapport à une f.c.m. de 300 V ou par rapport à une p.a.r.v. de 1 kW; ce rayonnement est déterminé à partir de la puissance nominale de l'émetteur et du gain théorique de l'antenne sans tenir compte des pertes diverses.
- Colonne 11: Type d'antenne. Le symbole A indique une antenne verticale simple alimentée à la base; le symbole B désigne tout autre type d'antenne dont la description figure dans l'Appendice 2 au Plan.
- Colonne 12: Hauteur de l'antenne en mètres, seulement dans le cas d'une antenne verticale simple.
- Colonne 13: Conductivité du sol, en millisiemens/mètre (mS/m).
- Colonne 14: Horaire de fonctionnement (TMG) en heures et minutes. Exemples: 0730-1800, 0000-2400, 0500-0230.
- Colonne 15: Observations indiquées par des symboles dont la signification est donnée dans les pages suivantes.

SIGNIFICATION DES SYMBOLES UTILISÉS DANS LA COLONNE «OBSERVATIONS»

(COLONNE 15 DU PLAN ET COLONNE 11 DE l'APPENDICE 1 AU PLAN)

- 1. (Non utilisé)
- 2.* Pendant la période de l'année comprise entre les deux dates suivant le symbole, l'assignation est utilisée selon l'horaire figurant dans la colonne 14.
- 3. Cette assignation doit être coordonnée.
- 4./... Cette assignation a été coordonnée avec/...

 La coordination doit cependant être effectuée avec d'autres pays.
- 5./... Cette assignation doit être coordonnée avec/...
- 6. Assignation française pour une station fonctionnant en République fédérale d'Allemagne.
- 7. Cette assignation est utilisée de jour dans les limites d'horaire de la Figure 20 de l'Annexe 2 au present Accord.
- L'azimut de rayonnement maximal peut être modifié par accord avec l'Administration de la Tchécoslovaquie, cette dernière demande que dans le secteur 320° à 340°, le gain soit limité à -8 dB.
- 9. L'Administration polonaise prendra des mesures techniques additionnelles pour réduire les brouillages dans la zone de service de la station de Rhodos sur 1 260 kHz afin que la contribution du réseau synchronisé polonais au champ utilisable de cette station ne dépasse pas 85 dB (μV/m). La coordination définitive sera faite bilatéralement entre la Grèce et la Pologne.
- 10. Le niveau de la puissance d'émission indiqué dans le Plan fera l'objet d'un accord mutuel entre l'Administration de Chypre et celle du Royaume-Uni.
- 11./... L'inscription de cette assignation dans le Plan a été demandée par/...
- 12. Les émissions de cette station sur cette fréquence cesseront lorsque la station d'Osaka sur 1 179 kHz sera mise en service.
- 13. Cette station ne fonctionnera sur cette fréquence qu'après le 14 mai 1977.
- 14. (Non utilisé)
- 15. L'horaire d'émission de jour de cette assignation est déterminé d'après les considérations du paragraphe 3.3.4.2 de l'Annexe 2 à l'Accord. En hiver, il ne dépassera pas 0900-1600 TMG, sauf accord entre administrations intéressées.
- 16. Si l'administration le considère nécessaire, la coordination de cette assignation avec celles des autres administrations concernées peut se faire conformément au paragraphe 3 de la Résolution N° 3.

Suivi de deux groupes de quatre chiffres séparés par une barre de fraction et représentant chacun une date.

- 17./... Les discussions relatives à cette assignation n'ont pas abouti à un accord avec les Administrations de/...
- 18./... Les discussions relatives à cette assignation n'ont pas abouti à un accord satisfaisant avec les Administrations de/...Cependant les administrations concernées ont convenu de poursuivre les discussions en vue d'aboutir à un accord satisfaisant.
- 19. La largeur de bande en audiofréquence est fixée à 4,5 kHz en utilisant, de plus, une forte compression de la modulation (cas D du paragraphe 4.4.2.1 du chapitre 4 de l'Annexe 2), sous réserve que les émetteurs des autres pays qui fonctionnent dans les canaux adjacents et qui sont susceptibles de causer un brouillage utilisent également le procédé correspondant au cas D.
- 20. L'Administration française recherchera avec l'Administration compétente des Vallées d'Andorre les moyens pratiques de réaliser dans la station de Sud-Radio une antenne directive permettant de réduire le rayonnement de cette station dans les directions de Varsovie (secteur compris entre les azimuts 45° et 55°) et de Rabat (secteur compris entre les azimuts 210° et 225°). Ces dispositions feront l'objet d'études entre les administrations intéressées en vue de la coordination souhaitée.
- 21. (Non utilisé)
- 1 467 kHz utilisation de nuit;
 594 kHz utilisation de jour.
- 23./... La coordination de cette assignation pendant la Conférence n'a pas été possible pour une raison ou une autre avec les Administrations de/...
 Cependant les administrations intéressées se proposent de rechercher ensemble les bases d'un accord satisfaisant.
- 24. Les discussions relatives à cette assignation n'ont pas pu avoir lieu avec l'Administration d'Israël, du fait que l'administration qui a demandé cette assignation ne reconnaît pas cette Administration. En conséquence, les dispositions de l'article 9 du Règlement des radiocommunications seront appliquées à la présente assignation vis-à-vis des assignations de l'autre administration.
- 25. Cette assignation est utilisée pendant la période du jour comprise dans les limites de fonctionnement indiquées par les courbes pointillées de la Figure 21 de l'Annexe 2 au présent Accord.
- 26./... L'horaire d'émission de cette assignation devra faire l'objet d'une coordination avec l'Administration de/... sur la base de la Figure 20 de l'Annexe 2 au présent Accord.
- 27. L'Administration du Royaume de l'Arabie Saoudite et l'Administration de la République Socialiste Fédérative de Yougoslavie sont convenues de l'horaire de fonctionnement suivant pour l'émetteur de Guriat (612 kHz):

```
1er avril-31 octobre: de 0300 à 1600 h (TMG)
1er novembre-31 mars: de 0500 à 1400 h (TMG).
```

Les deux Administrations sont disposées à rechercher de concert une solution meilleure que celle indiquée ci-dessus, afin de répondre de façon satisfaisante aux besoins des deux parties.

- 28. Après négociation, les Administrations de la Grèce et de la Libye sont convenues que lorsque les stations libyennes seront mises en service, leur contribution au brouillage, en Grèce, ne dépassera pas 79 dB.
- 29. Cette station cessera d'être exploitée le 14 mai 1977.

- 30. La délégation polonaise formule des réserves à l'égard des brouillages nuisibles causés sur le territoire de la République Populaire de Pologne, à la réception des émissions du réseau synchronisé polonais fonctionnant sur la fréquence 1 206 kHz, par la station de München-Ismaning et estime qu'une coordination bilatérale supplémentaire est nécessaire.
- 31. Cette assignation cessera d'être utilisée de jour dans les limites de la Figure 20 de l'Annexe 2 à l'Accord lors de la mise en service de la station de Mocimboa (MOZ) sur la fréquence 1 224 kHz.
- 32. Les valeurs indiquées dans les colonnes 7, 8, 9 et 10 sont provisoires jusqu'à conclusion d'un accord entre les Administrations de la Syrie et de la République fédérale d'Allemagne.
- 33. Les discussions relatives à cette assignation n'ont pas pu avoir lieu, du fait que les Administrations de l'Algérie, l'Arabie Saoudite, l'Egypte, les Emirats Arabes Unis, la Jordanie, le Koweït, le Liban, la Libye, le Maroc, la Mauritanie, le Qatar, le Soudan, la Tunisie, la R.A. du Yémen et la R.D.P. du Yémen, ne reconnaissent pas l'Administration qui a demandé cette assignation. En conséquence, les dispositions de l'article 9 du Règlement des radiocommunications seront appliquées à cette assignation vis-à-vis des assignations des Administrations précitées.

1602 kHz (120) Canal pour émetteurs de faible puissance – voir l'appendice 1

Low-power channel - see Appendix 1

Canai para transmisores de baja potencia - véase el apéndice 1

APPENDICE 1 AU PLAN

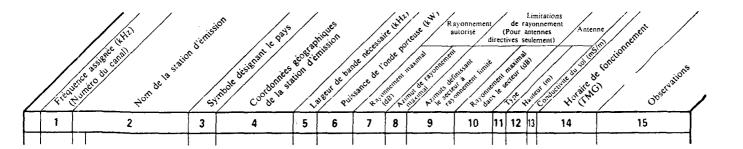

Assignations de fréquence dans les canaux pour émetteurs de faible puissance (Voir aussi la Résolution N° 2)

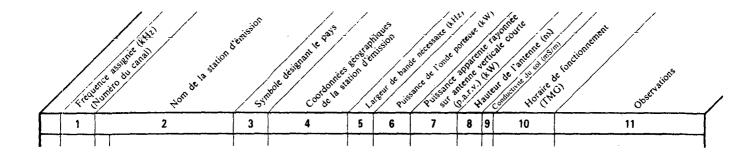

RENSEIGNEMENTS INCLUS DANS LES COLONNES DU TABLEAU DE L'APPENDICE 1 AU PLAN

- Colonne 1 · Fréquence assignée du canal, en kHz.

 Numéro du canal; ce numéro est indiqué entre parenthèses.
- Colonne 2 : Nom de la station d'émission. Le symbole S figurant à gauche de la ligne pointillée indique que la station fait partie d'un réseau synchronisé dont les autres stations portent le même symbole (voir sous Définitions, Chapitre 1 de l'Annexe 2 à l'Accord régional).
- Colonne 3 : Symbole désignant le pays ou la zone géographique où est située la station (voir le Tableau N° 1 de la Préface à la Liste internationale des fréquences).
- Colonne 4 : Coordonnées géographiques de la station d'émission, en degrés et minutes.
- Colonne 5: Largeur de bande nécessaire, en kHz; la valeur en kHz est précédée du symbole A, B, C ou D qui indique le rapport de protection dans le canal adjacent à employer pour le calcul du champ utilisable. Les différents cas correspondant à ces symboles sont mentionnés dans le paragraphe 4.4.2 de l'Annexe 2 à l'Accord.
- Colonne 6: Puissance de l'onde porteuse, en kW.
- Colonne 7: Puissance apparente rayonnée sur antenne verticale courte (p.a.r.v.), en kW.
- Colonne 8 : Hauteur de l'antenne, en mètres.
- Colonne 9 : Conductivité du sol, en millisiemens/mètre (mS/m).
- Colonne 10: Horaire de fonctionnement (TMG) en heures et minutes. Exemples: 0730-1800, 0000-2400, 0500-0230.
- Colonne 11: Observations indiquées par des symboles dont la signification est la suivante:
 - 3. Cette assignation doit être coordonnée.
 - 4./... Cette assignation a été coordonnée avec /...

 La coordination doit cependant être effectuée avec d'autres pays.

APPENDICE 2 AU PLAN

Gain de l'antenne (en dB) pour différents azimuts et angles de site

RENSEIGNEMENTS CONCERNANT LES CARACTÉRISTIQUES DE RAYONNEMENT DES ANTENNES D'ÉMISSION AUTRES QUE LES ANTENNES VERTICALES SIMPLES ALIMENTÉES A LA BASE

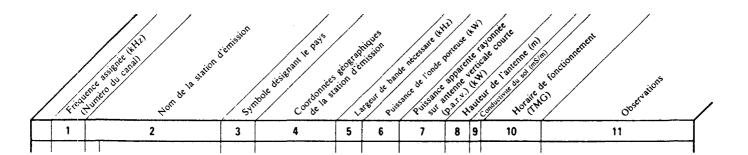

Colonne 1 : Symbole désignant le pays ou la zone géographique où est située la station (voir le Tableau N° 1 de la Préface à la Liste internationale des fréquences).

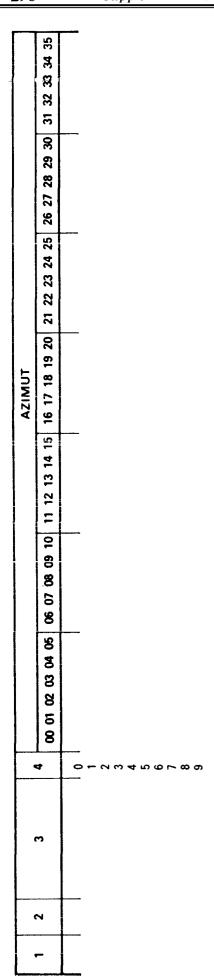

Colonne 2: Fréquence assignée du canal, en kHz.

Colonne 3: Nom de la station d'émission.

Colonne 4 : Angle de site.

Note. - Les azimuts et les angles de site sont exprimés en dizaines de degrés et également en dB.

155 KHZ 218 KHZ

ANNEXE 2

Données techniques utilisées pour l'élaboration du Plan et à utiliser dans l'application de l'Accord

ANNEXE 2

Données techniques utilisées pour l'élaboration du Plan et à utiliser dans l'application de l'Accord

CHAPITRE 1

Définitions

Canal (radiodiffusion en modulation d'amplitude)

Partie du spectre des fréquences dont la largeur est égale à la largeur de bande nécessaire pour une emission de radiodiffusion en modulation d'amplitude, et qui est caractérisée par la valeur nominale de la fréquence porteuse.

Canal pour émetteurs de faible puissance (CFP)

Canal utilisé par des stations de radiodiffusion fonctionnant dans les bandes des ondes hectométriques avec une p.a.r.v. maximale de 1 kW (soit une f.c.m. de 300 V).

Rapport signal/brouillage en audiofréquence

Rapport entre les valeurs de la tension du signal utile et de la tension de brouiliage, ces tensions étant mesurees dans des conditions déterminées à la sortie audiofréquence du récepteur.

Ce rapport est généralement exprimé en dB et correspond sensiblement à la différence en dB entre le niveau sonore du programme utile et celui des perturbations.

Rapport de protection en audiofréquence

Valeur minimale conventionnelle du rapport signal/brouillage en audiofréquence qui correspond à une qualité de réception définie subjectivement comme acceptable.

Ce rapport peut avoir diverses valeurs suivant le genre du service que l'on désire assurer.

Rapport signal utile/signal brouilleur aux fréquences radioélectriques

Rapport entre les valeurs de la tension aux fréquences radioélectriques du signal utile et de la tension aux fréquences radioélectriques du signal brouilleur, ces tensions étant mesurées aux bornes d'entrée du récepteur, dans des conditions déterminées.

Ce rapport est généralement exprimé en dB.

Rapport de protection aux fréquences radioélectriques

Valeur du rapport signal utile/signal brouilleur aux fréquences radioélectriques qui, dans des conditions bien déterminées, permet d'obtenir à la sortie d'un récepteur le rapport de protection en audiofréquence.

Ces conditions déterminées comprennent divers paramètres tels que l'écartement de fréquence des porteuses utile et brouilleuse, les caractéristiques de l'émission (type de modulation, taux de modulation, etc.), les niveaux d'entrée et de sortie du récepteur, ainsi que les caractéristiques du récepteur (sélectivité, sensibilité à l'intermodulation, etc.).

Champ utilisable (E,)

Valeur minimale du champ nécessaire pour assurer une réception satisfaisante, dans des conditions spécifiées, en présence de bruit naturel, de bruit artificiel et de brouillage dans une situation réclle (ou résultant d'un plan de fréquences).

Champ nominal utilisable (Enom)

Valeur minimale conventionnelle du champ nécessaire pour assurer une reception satisfaisante, dans des conditions specifiées, en présence de bruit naturel, de bruit artificiel et de brouillage dû à d'autres émetteurs.

La valeur du champ nominal utilisable est celle qui sert de référence pour la planification.

Zone de service (d'un émetteur de radiodiffusion)

Zone a l'intérieur de laquelle le champ d'un émetteur est égal ou supérieur au champ utilisable.

```
Force cymomotrice (f.c.m.) (dans une direction donnée) (voir le Rapport 618, 1974, du C.C.I.R.)
```

Produit du champ électrique en un point donné de l'espace, créé par une station d'émission, par la distance de ce point à l'antenne. Cette distance doit être suffisante pour que les composantes réactives du champ soient negligeables, en admettant que la propagation n'est pas affectée par la conductivité finie du sol.

La f.c.m. est un vecteur dont on peut considérer, le cas échéant, les composantes selon deux axes perpendiculaires a la direction de propagation.

La f.c m. s'exprime en volts, par le même nombre que le champ électrique en mV/m à 1 km.

```
Puissance apparente rayonnée sur antenne verticale courte (p.a.r.v.) (voir le Rapport 618, 1974, du C.C.I.R.)
```

Puissance d'alimentation d'une antenne, multipliée par son gain dans une direction donnée par rapport à une antenne verticale courte dans le plan horizontal.

Gain d'une antenne par rapport à une antenne verticale courte (dans une direction donnée)

Le rayonnement est exprimé soit en puissance apparente rayonnée sur une antenne verticale courte (p.a.r.v.) soit en force cymomotrice (f.c.m.). Il convient d'adopter pour définir le gain d'une antenne par rapport à une antenne verticale courte, dans une direction donnée, l'une des deux définitions suivantes:

rapport entre la f.c.m. de l'antenne considérée dans une direction donnée et la f.c.m. dans le plan horizontal d'une antenne verticale courte sans perte placée sur un plan horizontal parfaitement conducteur, les deux antennes étant alimentées avec la même puissance.

rapport entre la puissance nécessaire à l'entrée d'une antenne verticale courte sans perte placée sur un plan horizontal parfaitement conducteur pour produire une p.a.r.v. de 1 kW (ou une f.c.m. de 300 V) dans une direction horizontale et la puissance fournie à l'antenne considérée pour produire la même valeur de la p.a.r.v. (ou de la f.c.m.) dans une direction donnée.

Ce rapport, exprimé en dB, est le même pour les deux définitions.

Réseau synchronisé

Ensemble d'émetteurs dont les fréquences porteuses sont identiques ou ne différent que d'une très faible valeur, en général une fraction de hertz, et qui diffusent le même programme.

CHAPITRE 2

Propagation de l'onde de soi

2.1 La valeur du champ de l'onde de sol est donnée par les courbes des figures 1 à 9 provenant de l'Avis 368-2 du C.C.1.R.

Ces courbes appellent les observations ci-après:

- 2.1.1 elles sont établies pour un sol régulier homogène;
- 2.1.2 il n'est pas tenu compte des effets de la troposphère dans les bandes de fréquences considérées;
- 2.1.3 les courbes correspondent aux conditions suivantes:
 - elles sont calculées pour la composante verticale du champ électrique d'après l'analyse rigoureuse de van der Pol et Bremmer;
 - l'émetteur est un doublet électrique vertical idéal de Hertz, presque équivalent à une antenne verticale de longueur inférieure au quart d'onde;
 - le moment électrique de ce doublet est choisi de telle manière que si le doublet rayonnait une puissance de 1 kW et si la Terre était un plan infini parfaitement conducteur, le champ rayonné aurait, a 1 km de distance, une valeur de 3 × 10⁵ μV/m;
 - les courbes sont tracées pour des distances mesurées autour de la surface courbe de la Terre;
 - la courbe A intitulée «inverse de la distance», à laquelle les courbes sont asymptotiques pour les courtes distances, passe par la valeur de champ de 3 × 10⁵ μV/m pour une distance de 1 km;
- 2.1.4 l'affaiblissement de propagation pour l'onde de sol, défini à l'Avis 341 (1974) du C.C.I.R., peut être déterminé d'après les valeurs de champ (en dB par rapport à 1 μ V/m) indiquées par les courbes ci-jointes, en utilisant la formule (19) du Rapport 112 (1974) du C.C.I.R.;
- 2.1.5 en regle générale, les courbes ne devraient être utilisées pour déterminer le champ que lorsque l'on peut prevoir avec certitude une amplitude négligeable des réflexions ionosphériques pour la fréquence considérée, par exemple lorsqu'il s'agit de la propagation de jour dans la bande comprise entre 150 kHz et 2 MHz, pour les distances inférieures à 2 000 km environ.

2.2 Trajet mixte

2.2.1 Les courbes des figures 1 à 9 peuvent être utilisées pour déterminer la propagation sur des trajets mixtes (au-dessus d'un sol régulier hétérogène) de la façon décrite ci-après.

Ces trajets peuvent être constitués de sections S_1 , S_2 , S_3 , etc. de longueurs d_1 , d_2 , d_3 , etc. ayant des conductivités et des constantes diélectriques respectives σ_1 , ε_1 ; σ_2 , ε_2 ; σ_3 , ε_3 , etc. comme l'indique le schéma ci-dessous pour trois sections:

Parmi les diverses méthodes semi-empiriques permettant de déterminer la propagation sur de tels trajets, celle de Millington (1949) est la plus précise et satisfait à la condition de réciprocité. Cette méthode part de l'hypothèse que l'on dispose des courbes applicables aux différents types de terrain des sections S_1 , S_2 , S_3 , etc. supposées individuellement homogènes, et se rapportant toutes à la même source T définie, par exemple au moyen d'une courbe «inverse de la distance». Les valeurs pour toute autre source pourront ainsi être obtenues par l'application d'un coefficient.

On choisit, pour une fréquence donnée, la courbe correspondant à la section S_1 et l'on relève le champ $F_1(d_1)$ en dB (μ V/m) pour la distance d_1 . La courbe correspondant à la section S_2 permet de déduire ensuite les champs $E_2(d_1)$ et $E_2(d_1+d_2)$ puis on trouve, de façon similaire, à l'aide de la courbe s'appliquant à la section S_3 , les champs $E_3(d_1+d_2)$ et $E_3(d_1+d_2+d_3)$ et ainsi de suite.

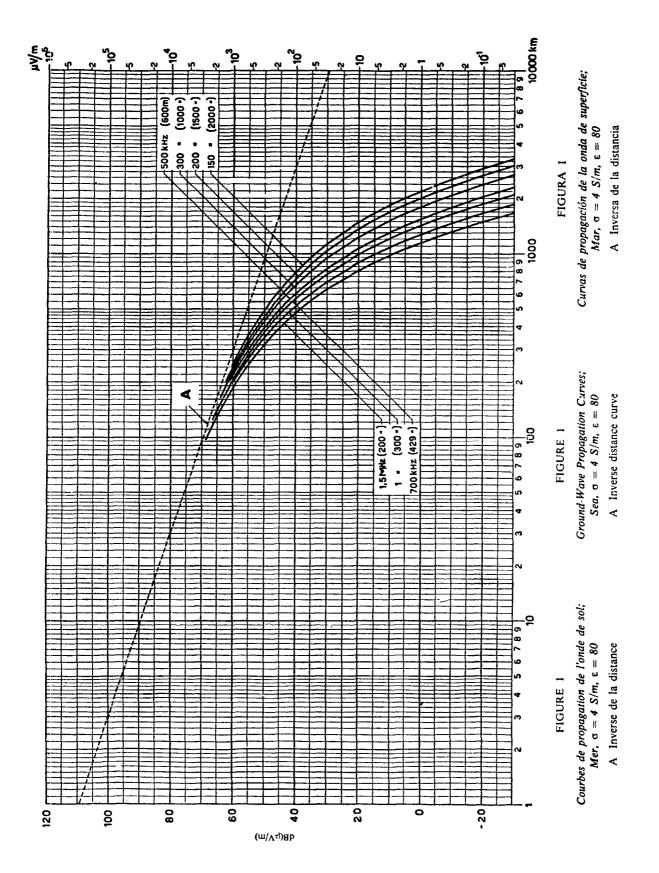

Le champ à la réception E_R est alors défini par l'expression

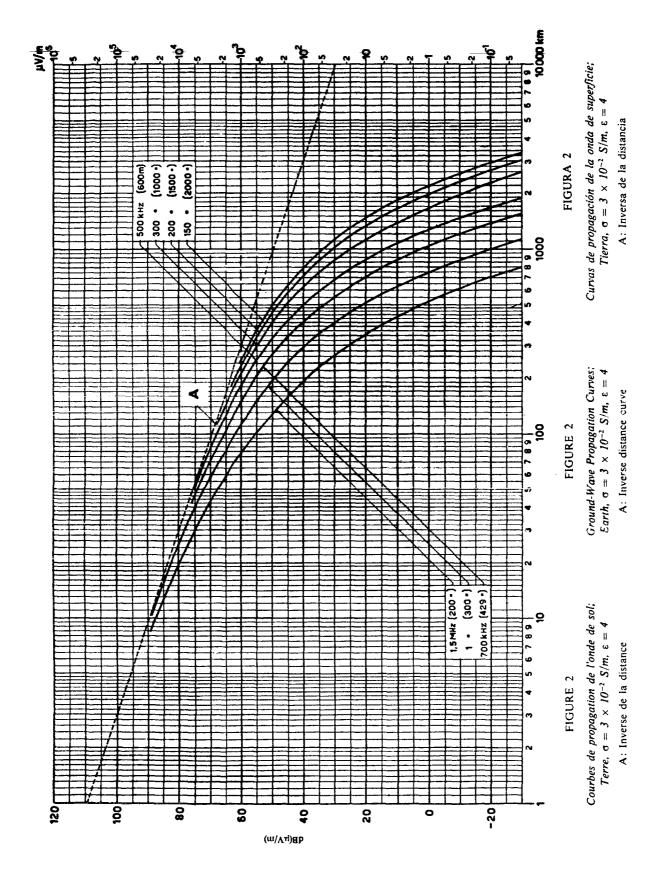

$$E_R = E_1(d_1) - E_2(d_1) + E_2(d_1 + d_2) - E_3(d_1 + d_2) + E_3(d_1 + d_2 + d_3)$$

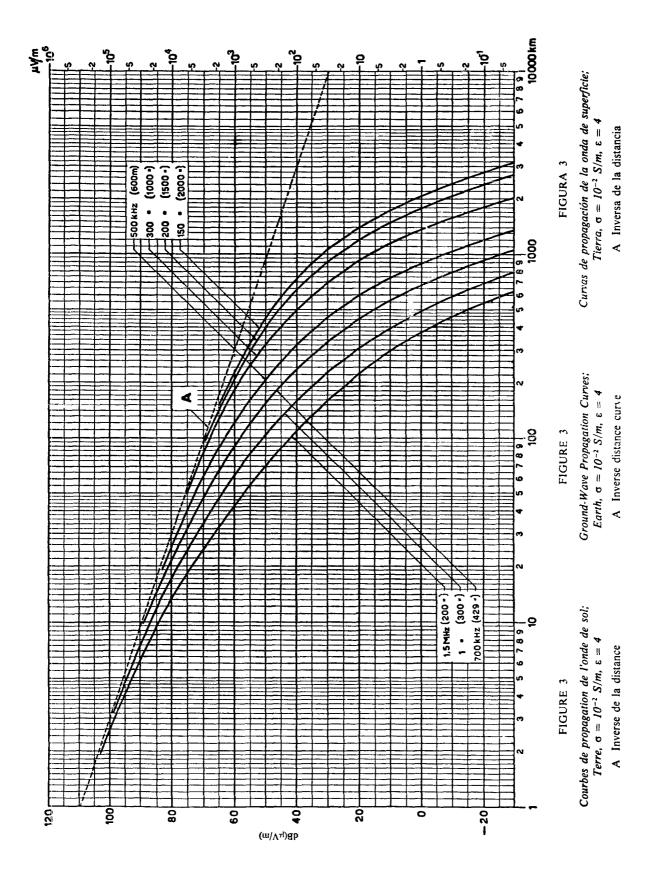

On inverse ensuite le processus en appelant R l'émetteur et T le récepteur; on obtient ainsi un champ E_T défini par l'expression

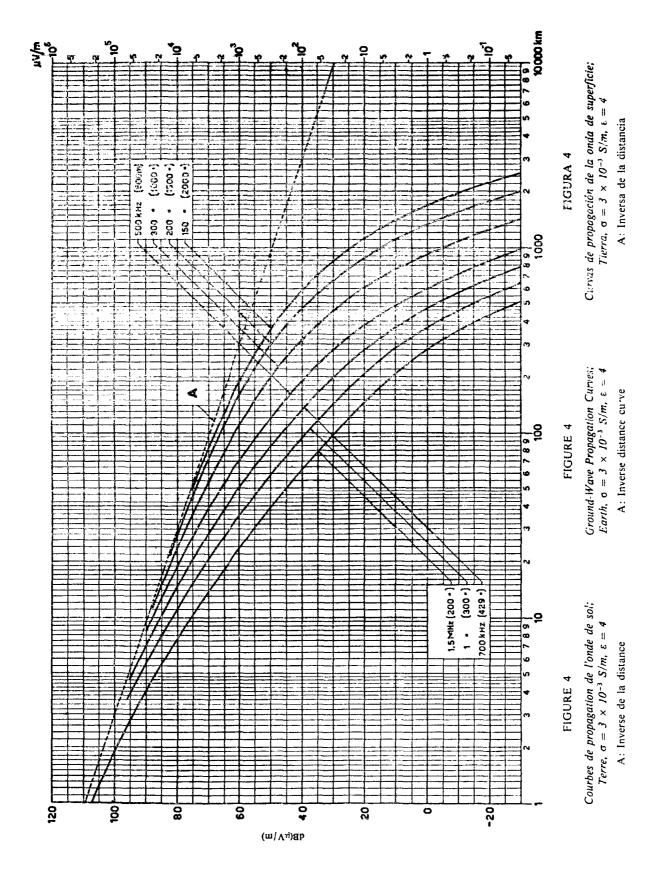

$$E_T = E_3(d_3) - E_2(d_3) + E_2(d_3 + d_2) - E_3(d_3 + d_2) + E_3(d_3 + d_2 + d_3)$$

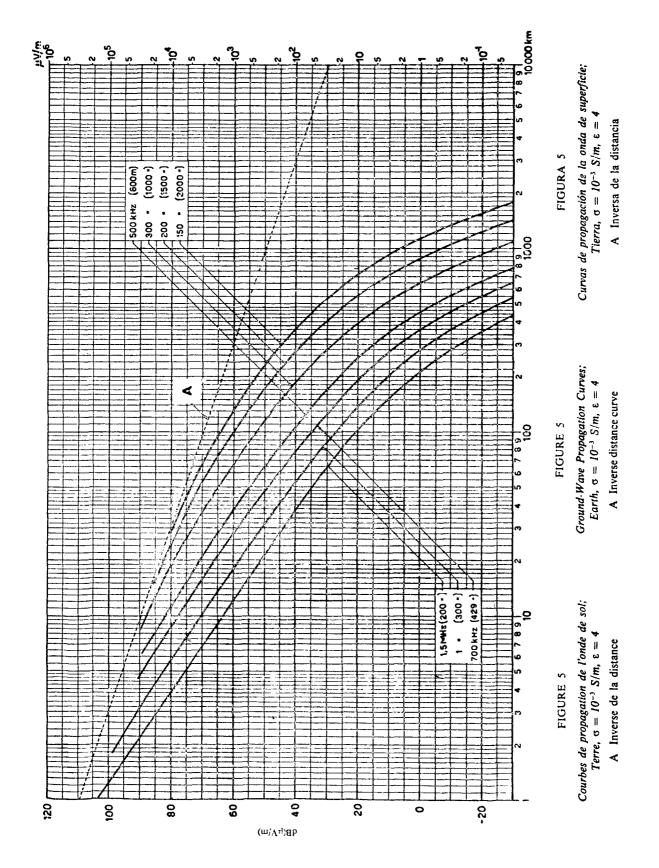

Le champ requis est donné par $^{1}/_{2}$ ($E_{R}+E_{T}$), la manière d'étendre le calcul à un nombre plus grand de sections etant evidente.

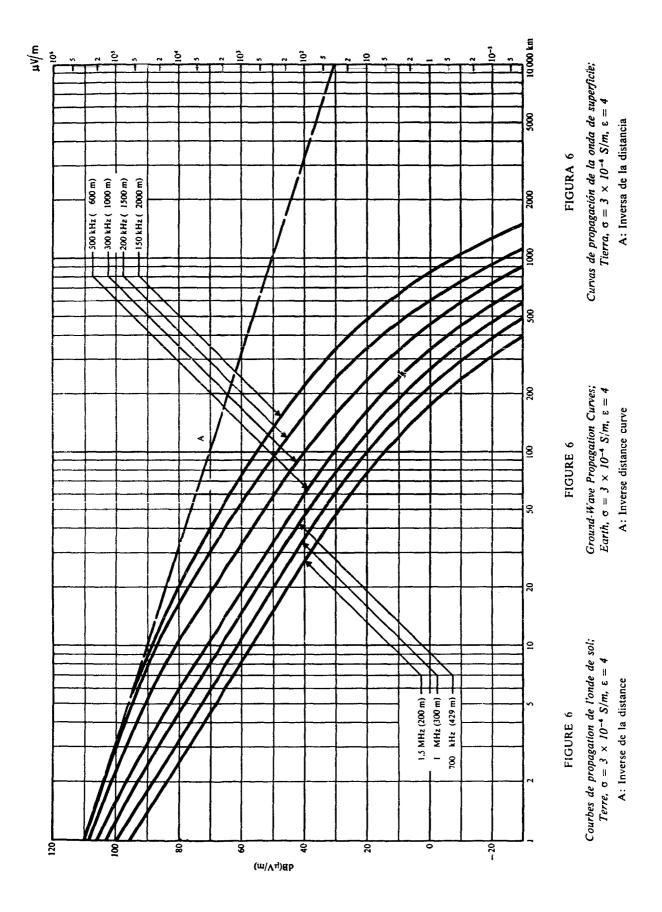

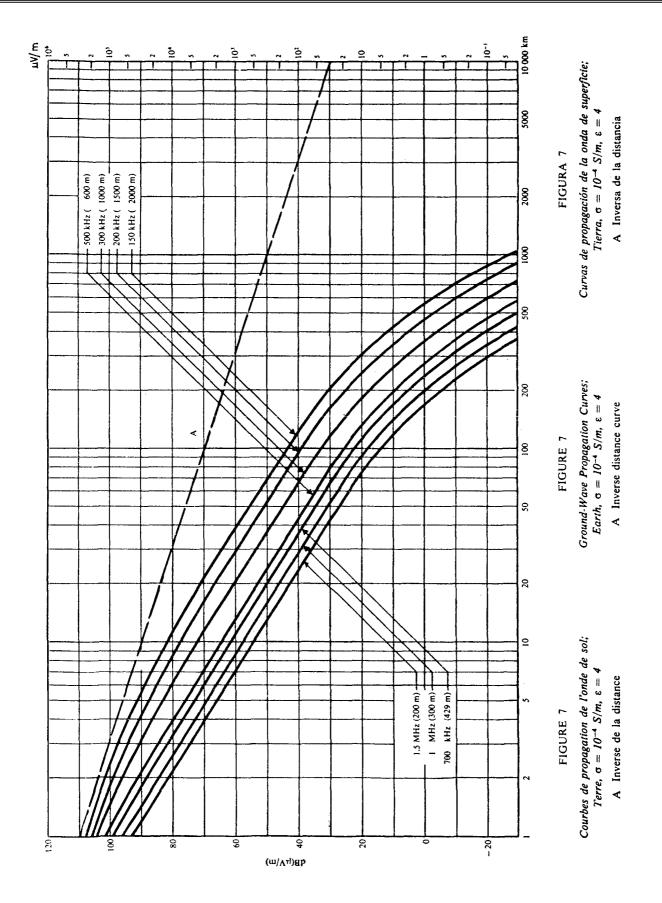

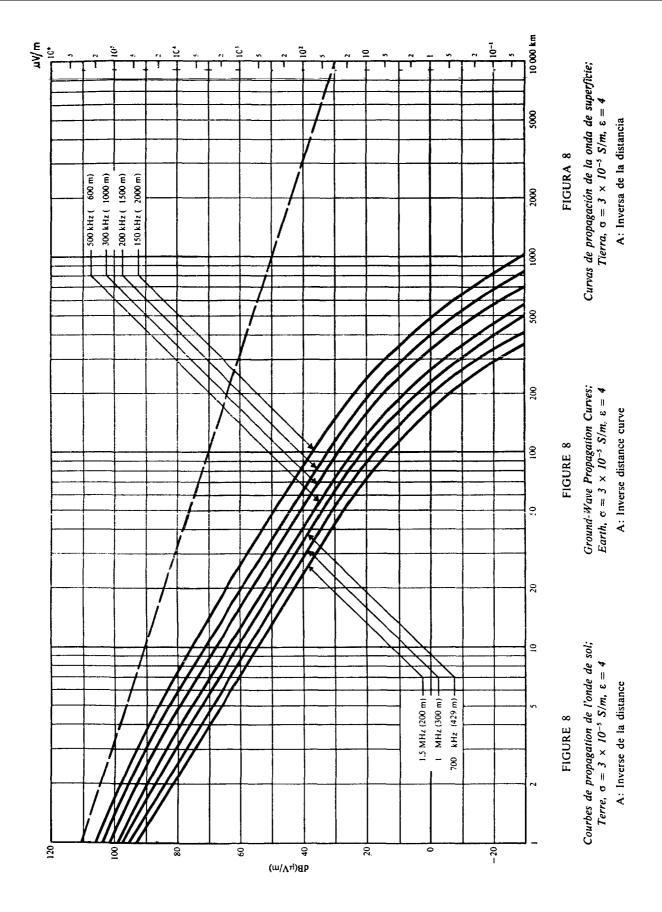

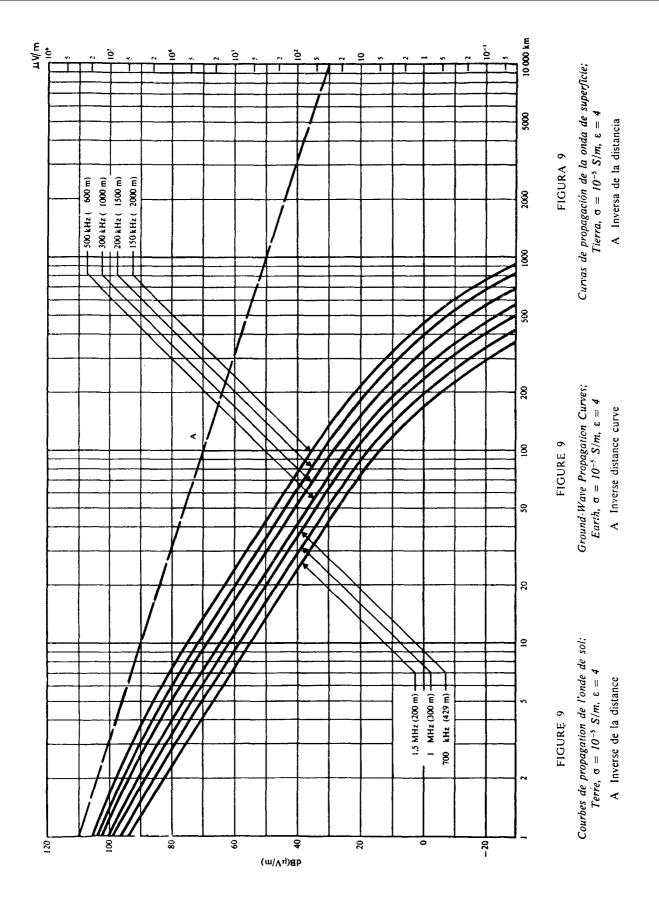

CHAPITRE 3

Propagation de l'onde ionosphérique

3.1 Introduction

Dans la Région 1, on applique la méthode de prévision de la propagation de l'onde ionosphérique décrite au paragraphe 3.3.

Dans la partie asiatique de la Région 3 située au Nord du parallèle 11° Sud, on applique la méthode de prevision de la propagation de l'onde ionosphérique décrite au paragraphe 3.4.

Dans la partie de la Région 3 située au Sud du parallèle 11° Sud, on applique la méthode de prévision de la propagation de l'onde ionosphérique décrite au paragraphe 3.5.

Dans le cas d'un trajet dont les extrémités sont situées dans des régions différentes, la méthode à utiliser est celle qui s'applique à la région où se trouve le point milieu de l'arc de grand cercle joignant ces deux extrémites.

Dans l'ensemble des Régions 1 et 3, le rayonnement dans une direction donnée est exprimé en dB par rapport a une f.c.m. de 300 V ou à une p.a.r.v. de 1 kW. Les puissances sont exprimées en dB par rapport a 1 kW.

3.2 Symboles

b - Facteur d'activité solaire indiqué au paragraphe 3.3.2.6;

d = Distance mesurée à la surface du sol le long du grand cercle entre l'émetteur et le récepteur, en km:

 F_o – Valeur médiane annuelle du champ à l'heure de référence, en dB par rapport à 1 μ V/m;

 F_c = Valeur du champ, en dB par rapport à 1 μ V/m, tirée de la courbe Nord-Sud du Caire (figure 22);

 F_t - Valeur médiane annuelle du champ à l'heure t, en dB par rapport à 1 μ V/m;

f - Fréquence, en kHz;

f' = Fréquence définie par la formule (6), en kHz;

G = Gain de l'antenne, en dB, par rapport à une antenne verticale courte, dans la direction de propagation;

 G_o = Gain correspondant à une extrémité du trajet située sur la côte, en dB;

 G_s = Gain correspondant à une extrémité du trajet située près de la mer, en dB;

h Hauteur de l'antenne d'émission, en longueurs d'onde;

 h_r = Hauteur de la couche réfléchissante, en km;

I = Inclinaison magnétique, en degrés;

k – Coefficient de pertes de référence dues à l'absorption ionosphérique;

 k_R = Coefficient de pertes tenant compte de l'absorption ionosphérique, de la focalisation et des affaiblissements aux extrémités et entre bonds dans le cas des trajets à plusieurs bonds;

 L_p = Affaiblissement supplémentaire dû au couplage de polarisation, en dB;

 L_t = Coefficient d'affaiblissement horaire, en dB;

P = Puissance rayonnée, en dB par rapport à 1 kW;

p = Longueur du chemin parcouru par l'onde, en km;

Q = Facteur intervenant dans le calcul du gain dû à la proximité de la mer (paragraphe 3.3.2.3);

R = Moyenne glissante sur douze mois du nombre de taches solaires (nombre de Wolf) donné par l'Observatoire de Zürich;

s = Distance entre une extrémité du trajet et la mer, mesurée le long du grand cercle, en km;

t = Nombre d'heures après le coucher ou avant le lever du soleil;

V = Force cymomotrice de l'émetteur, en dB par rapport à une force cymomotrice de référence de 300 V;

θ = Angle entre la direction de propagation et la direction magnétique Est-Ouest, en degrés;

 λ = Longueur d'onde;

Φ = Paramètre de latitude géomagnétique;

 Φ_T = Latitude géomagnétique de l'émetteur Φ_R = Latitude géomagnétique du récepteur en degrés, valeurs positives dans l'hémisphère nord et négatives dans l'hémisphère sud

3.3 Méthode de prévision du champ de l'onde ionosphérique pour les fréquences comprises entre 150 kHz et 1 605 kHz, dans la Région 1

3.3.1 Introduction

La méthode de prévision ci-dessous permet d'évaluer le champ de l'onde ionosphérique produit de nuit par une antenne verticale simple ou composée rayonnant une puissance donnée, les mesures étant faites au niveau du sol, au moyen d'un cadre dont le plan vertical coïncide avec le grand cercle qui contient la direction de l'émetteur. Cette méthode est utilisée pour des trajets d'une longueur maximale de 12 000 km.

3.3.2 Valeur médiane annuelle du champ de nuit

Le champ prévu de l'onde ionosphérique est donné par la formule:

$$F_o = V + G_S - L_p + (105.3 - 20\log_{10}p) - 10^{-3}k_p p \tag{1}$$

dans laquelle F_o est la valeur médiane annuelle des médianes semi-horaires, en dB par rapport à 1 μ V/m, à l'heure de référence indiquée au paragraphe 3.3.2.1.

La figure 10 représente la valeur de $(105,3-20 \log_{10} p)$ en fonction de la distance mesurée au sol.

3.3.2.1 Heure de référence

On prend pour heure de référence six heures après le coucher du soleil en un point S de la surface de la Terre. Pour les trajets inférieurs à 2 000 km, S est le point milieu du trajet. Pour les trajets plus longs, S est situé à 750 km de l'extrémité où le soleil se couche en dernier, cette distance étant mesurée le long du grand cercle.

3.3.2.2 Force cymomotrice

La force cymomotrice V dans l'azimut et le site de la direction de propagation se calcule à l'aide de la formule:

$$V = P' + G \tag{2}$$

- ou pour P', exprimé en dB (kW), on prendra la puissance fournie par l'émetteur à la ligne d'alimentation de l'antenne, en négligeant les pertes diverses dans l'antenne et sa ligne d'alimentation,
- et ou G est le gain en dB de l'antenne par rapport à une antenne verticale courte, dans la direction considérée.

Pour une antenne verticale simple et en l'absence de perte, ce gain est donné en dB par la figure 11.

3.3.2.3 Gain dû à la proximité de la mer

 G_S est le gain supplémentaire du signal quand l'une ou l'autre des extrémités du trajet est située près de la mer. Pour une seule extrémité, G_S est donné par la formule:

$$G_S = G_o - 10^{-3} \frac{Qsf}{G_o} (dB)$$
 (3)

dans laquelle G_o est le gain dans le cas où l'extrémité est située sur la côte, f la fréquence en kHz, s la distance en km, entre l'extrémité et la mer, mesurée le long du grand cercle. Q est égal à 0,44 dans la bande des ondes kilométriques et à 1,75 dans la bande des ondes hectométriques. Dans la figure 12, G_o est indiqué en fonction de d pour les bandes mentionnées ci-dessus. Dans la bande des ondes hectométriques, $G_o = 10$ dB quand d est supérieur à 6 500 km. La formule (3) s'applique dans la mesure où s permet d'obtenir des valeurs positives de G_s . Pour des distances plus longues, $G_s = 0$. Lorsque les deux extrémités du trajet sont proches de la mer, G_s est la somme des valeurs de G_s calculées pour chaque extrémité.

3.3.2.4 Affaiblissement supplémentaire par couplage de polarisation

 L_p est l'affaiblissement supplémentaire dû au couplage de polarisation. Dans la bande des endes kilomé triques, $L_p = 0$. Dans la bande des ondes hectométriques, aux basses latitudes et pour $|I| \le 45^\circ$, on applique pour chaque extrémité la formule:

$$L_p = 180(36 + \theta^2 + I^2)^{-1/2} - 2 \text{ (dB)}$$
 (4) (voir figure 13)

ou I est l'inclinaison magnétique en degrés à l'extrémité et θ l'azimut du trajet mesuré en degrés par rapport à la direction magnétique Est-Ouest, de telle sorte que $|\theta|$ soit inférieur ou égal à 90°. Pour |I| > 45°, $L_p = 0$. L_p doit être évalué séparément pour les deux extrémités, car θ et I peuvent avoir une valeur différente; les deux valeurs de L_p sont ensuite additionnées. Pour I et θ , il convient d'utiliser les valeurs les plus précises de l'inclinaison et de la déclinaison magnétique dont on dispose (voir figures 14 et 15).

3.3.2.5 Longueur du trajet parcouru par l'onde

Pour les trajets d'une longueur supérieure à 1 000 km, p est sensiblement égal à la distance au sol d. Pour les trajets plus courts,

$$p = (d^2 + 4h_r^2)^{1/2} (5)$$

ou $h_r = 100$ km si f est au plus égal à f' et $h_r = 220$ km si f est supérieur à f', f' étant donné, en kHz, par la formule

$$f' = 350 + [(2.8d)^3 + 300^3]^{1/3}$$
 (6)
(voir figure 16)

La formule (5) peut être utilisée avec une erreur négligeable pour n'importe quelle distance.

3.3.2.6 Coefficient de pertes dues à l'absorption ionosphérique

Le coefficient de pertes dues à l'absorption ionosphérique k_R est donné par:

$$k_R = k + 10^{-2}bR (7)$$

ou

$$k = 1.9f^{0.15} + 0.24f^{0.4} (tg^2\Phi - tg^237^\circ)$$
 (8)

(voir figure 17)

Dans la bande des ondes kilométriques, b = 0. Dans la bande des ondes hectométriques, b = 1 pour les trajets situes en Europe et b = 0 partout ailleurs.

Pour les trajets d'une longueur inférieure à 3 000 km, on prend:

$$\Phi = 0.5(\Phi_T + \Phi_p) \tag{9}$$

ou Φ_T et Φ_R sont respectivement les latitudes géomagnétiques (voir figure 18) du point d'émission et du point de réception, déterminées en assimilant le champ magnétique terrestre à celui d'un dipôle placé au centre de la Terre et dont le pôle nord a pour coordonnées géographiques 78,5°N et 69°W. Φ_T et Φ_R sont positifs dans l'hémisphère nord et négatifs dans l'hémisphère sud. Les trajets d'une longueur supérieure à 3 000 km sont divisés en deux parties égales que l'on considère séparément. On prend pour valeur de Φ de chaque demi-trajet la moyenne de la latitude géomagnétique d'une extrémité et de celle du point milieu du trajet total, cette dernière étant supposee egale à la moyenne de Φ_T et Φ_R , de sorte que:

$$\mathbf{\Phi} = 0.25(3\mathbf{\Phi}_T + \mathbf{\Phi}_g) \tag{10}$$

pour la première moitié du trajet et

$$\Phi = 0.25(\Phi_T + 3\Phi_R) \tag{11}$$

pour la seconde moitié.

On prend alors la moyenne des valeurs de k calculées à partir de la formule (8) pour chaque demi trajet et on la porte dans la formule (7).

Si $|\Phi|$ est supérieur à 60°, on utilise la formule (8) avec $\Phi = 60^\circ$.

- 3.3.4 Variation nocturne du champ médian annuel
- 3.3.4.1 La variation nocturne du champ médian annuel est donnée par la formule suivante:

$$F_t = F_o - L_t$$

La figure 19 représente la moyenne des variations du champ médian annuel au cours de la nuit, calculée d'après la figure 8 du Rapport 264 (1974) du C.C.I.R. et la figure 5 du Rapport 431 (1974) du C.C.I.R.; t représente le nombre d'heures après le coucher ou avant le lever du soleil selon le cas, au point milieu du trajet, au niveau du sol, lorsque d est inférieur à 2 000 km et, pour les trajets plus longs, à 750 km de l'extrémité où le soleil se couche en dernier ou se lève en premier.

- 3.3.4.2 Le calcul du champ du signal brouilleur d'une station est fondé sur la méthode décrite au paragraphe 3.3.4.1; il est effectué en tenant compte de la plus faible valeur du coefficient d'affaiblissement horaire correspondant à la période commune de fonctionnement de l'émetteur utile et de l'émetteur brouilleur. Les résultats sont extrapolés le cas échéant.
- 3.3.4.3 Dans le cas d'une exploitation de jour, les administrations intéressées peuvent utiliser d'un commun accord comme bases de calcul la figure 20 (pour les zones tempérées) et la figure 21 (pour la zone équatoriale); le champ de l'onde ionosphérique calculé à l'heure de référence de la station brouilleuse sera alors réduit de 20 dB (ou de 40 dB dans le cas de la courbe pointillée de la figure 21); les figures 20 et 21 se réfèrent au temps moyen local à l'emplacement de la station. Ce temps local est égal au temps moyen de Greenwich augmenté ou diminué, selon le cas, du nombre d'heures et de minutes correspondant à la longitude de la station.
- 3.3.5 Variations du champ d'un jour à l'autre et durant de courtes périodes

Le champ dépassé pendant 10% du temps total d'une petite série de nuits et pendant de courtes périodes centrées sur une heure donnée, est supérieur de 8 dB dans la bande des ondes kilométriques, et de 10 dB dans la bande des ondes hectométriques, aux valeurs de F_o et F_t mentionnées ci-dessus.

3.4 Méthode de prévision du champ de l'onde ionosphérique pour les fréquences comprises entre 525 kHz et 1 605 kHz, dans la partie asiatique de la Région 3 située au Nord du parallèle 11° Sud

3.4.1 Courbe de propagation

Dans la zone asiatique de la Région 3, située au Nord du parallèle 11° Sud, il convient d'utiliser pour la prévision du champ de l'onde ionosphérique la courbe Nord-Sud du Caire, représentée à la figure 22, pour la valeur médiane annuelle du champ à minuit. Cette courbe est rapportée à une p.a.r.v. de 1 kW ou une f.c.m. de 300 V. Le champ F_o , en dB, est donné par la formule:

$$F_o = F_c - L_p + V \tag{12}$$

3.4.2 Affaiblissement supplémentaire par couplage de polarisation

 L_{ρ} est l'affaiblissement supplémentaire dû au couplage de polarisation. Dans la bande des ondes hectometriques, aux basses latitudes et pour $|I| \le 45^{\circ}$, on applique, pour chaque extrémité, la formule:

$$L_p = 180(36 + \theta^2 + I^2)^{-1/2} - 2 \text{ (dB)}$$
 (voir figure 13)

ou I est l'inclinaison magnétique en degrés à l'extrémité et θ l'azimut du trajet mesuré en degrés par rapport à la direction magnétique Est-Ouest, de telle sorte que $|\theta|$ soit inférieur ou égal à 90°. Pour |I| > 45°, $L_p = 0$. L_p doit être évalué séparément pour les deux extrémités car θ et I peuvent avoir une valeur différente; les deux valeurs de L_p sont ensuite additionnées. Pour I et θ , il convient d'utiliser les valeurs les plus précises de l'inclinaison et de la déclinaison magnétiques dont on dispose (voir figures 14 et 15).

- 3.4.3 v ariation nocturne du champ médian annuel
- 3.4.3.1 La variation nocturne du champ médian annuel est donnée par la formule suivante:

$$F_t = F_o - L_t \tag{14}$$

Dans la figure 19, t représente le nombre d'heures après le coucher ou avant le lever du soleil selon les cas, au point milieu du trajet, au niveau du sol, lorsque d est inférieur à 2 000 km et, pour les trajets plus longs, à 750 km de l'extrémité où le soleil se couche en dernier ou se lève en premier.

- 3.4.3.2 Le calcul du champ du signal brouilleur d'une station est fondé sur la méthode décrite au paragraphe 3.4.3.1; il est effectué en tenant compte de la plus faible valeur du coefficient d'affaiblissement horaire correspondant à la période commune de fonctionnement de l'émetteur utile et de l'émetteur brouilleur. Les résultats sont extrapolés le cas échéant.
- 3.4.3.3 Dans le cas d'une exploitation de jour, les administrations intéressées peuvent utiliser d'un commun accord, comme bases de calcul, la figure 20 (pour les zones tempérées) et la figure 21 (pour la zone équatoriale); le champ de l'onde ionosphérique calculé à l'heure de référence de la station brouilleuse sera alors réduit de 20 dB (ou de 40 dB dans le cas de la courbe pointillée de la figure 21). Les figures 20 et 21 se réfèrent au temps moyen local à l'emplacement de la station. Ce temps moyen local est égal au temps moyen de Greenwich augmenté ou diminué selon le cas du nombre d'heures et de minutes correspondant à la longitude de la station.

3.4.4 Variations du champ d'un jour à l'autre et durant de courtes périodes

Le champ dépassé pendant 10% du temps total d'une petite série de nuits et pendant de courtes périodes centrées sur une heure donnée, est supérieur de 10 dB dans la bande des ondes hectométriques, aux valeurs de F_o et F_t mentionnées ci-dessus.

- 3.5 Méthode de prévision du champ de l'onde ionosphérique pour les fréquences comprises entre 525 kHz et 1 605 kHz, dans la partie de la Région 3 située au Sud du parallèle 11° Sud
- 3.5.1 Symboles

Voir 3.2.

3.5.2 Introduction

Voir 3.3.1 en ce qui concerne la bande des ondes hectométriques.

3.5.3 Valeur médiane annuelle du champ de nuit

Le champ prévu de l'onde ionosphérique est donné par la formule:

$$F_{o} = V + G_{S} - L_{p} + 108 - 20\log_{10}p - 0.8 \times 10^{-3}k_{R}p$$
 (15)

dans laquelle F_o est la valeur médiane annuelle des médianes semi-horaires, en dB par rapport à 1 μ V/m, à l'heure de référence indiquée au paragraphe 3.3.2.1.

3.5.3.1 Heure de référence

Voir 3.3.2.1.

3.5.3.2 Force cymomotrice

Voir 3.3.2.2.

3.5.3.3 Gain dû à la proximité de la mer

Voir 3.3.2.3 en ce qui concerne la bande des ondes hectométriques.

3.5.3.4 Affaiblissement supplémentaire par couplage de polarisation

Voir 3.3.2.4 en ce qui concerne la bande des ondes hectométriques.

3.5.3.5 Longueur du trajet parcouru par l'onde

Voir 3.3.2.5.

3.5.3.6 Coefficient de pertes dues à l'absorption ionosphérique

Le coefficient de pertes dues à l'absorption ionosphérique k_R est donné par la formule:

$$k_R = k + 10^{-2}bR \tag{16}$$

ou

$$k = 1.9f^{0.15} + 0.24f^{0.4} (tg^2 \Phi - tg^2 37^\circ)$$
 (voir figure 17)

Dans la bande des ondes hectométriques, b = 1.

Pour les trajets d'une longueur inférieure à 3 000 km, on prend:

$$\mathbf{\Phi} = 0.5(\mathbf{\Phi}_T + \mathbf{\Phi}_R) \tag{18}$$

ou Φ_T et Φ_R sont respectivement les latitudes géomagnétiques (voir figure 18) du point d'émission et du point de reception, déterminées en assimilant le champ magnétique terrestre à celui d'un dipôle placé au centre de la Terre et dont le pôle Nord a pour coordonnées géographiques 78,5° N et 69° W. Φ_T et Φ_R sont négatifs dans l'hémisphère Sud. Les trajets d'une longueur supérieure à 3 000 km sont divisés en deux parties égales que l'on considère séparément. On prend pour valeur de Φ de chaque demi-trajet la moyenne de la latitude géomagnétique d'une extrémité et de celle du point milieu du trajet total, cette dernière étant supposée égale à la moyenne de Φ_T et Φ_R , de sorte que:

$$\mathbf{\Phi} = 0.25(3\mathbf{\Phi}_T + \mathbf{\Phi}_R) \tag{19}$$

pour la première moitié du trajet et

$$\Phi = 0.25(\Phi_T + 3\Phi_R) \tag{20}$$

pour la seconde moitié.

On prend alors la moyenne des valeurs de k calculées à partir de la formule (17) pour chaque demitrajet et on la porte dans la formule (16).

Si $|\Phi|$ est supérieur à 60°, on utilise la formule (17) avec $\Phi = 60^\circ$.

3.5.4 Variation nocturne du champ médian annuel

Voir 3.3.4.

3.5.5 Variations du champ d'un jour à l'autre et durant de courtes périodes

Le champ dépassé pendant 10% du temps total d'une petite série de nuits et pendant de courtes périodes, contrées sur une heure donnée, est supérieur de 7 dB dans la bande des ondes hectométriques, aux valeurs de F_o et F_t mentionnées au paragraphe 3.3.4.

CHAPITRE 4

Normes de radiodiffusion

4.1 Classe d'émission

Le Plan est établi pour un système à modulation d'amplitude à double bande latérale et à porteuse complète (A3).

4.2 Puissance

La puissance de l'émetteur est la puissance de l'onde porteuse en l'absence de modulation.

4.3 Rayonnement

Le rayonnement est considéré comme le produit de la puissance nominale de l'émetteur par le gain de l'antenne (par rapport à une antenne verticale courte) supposée sans pertes diverses. Il est exprimé soit par la forme cymomotrice (f.c.m. en volts ou en dB par rapport à 300 volts), soit par la puissance apparente rayonnée sur antenne verticale courte (p.a.r.v. en kW, ou en dB par rapport à 1 kW).

4.4 Rapports de protection

Dans l'application de l'Accord, on utilisera les valeurs ci-dessous pour le rapport de protection dans le même canal et dans le canal adjacent, à moins qu'il n'en soit convenu autrement entre administrations interessees.

Dans le cas où le signal utile ou le signal brouilleur sont fluctuants, les valeurs du rapport de protection sont applicables à minuit pour au moins 50% des nuits d'une année.

4.4.1 Rapports de protection dans le même canal

- 30 dB pour un signal utile stable en présence d'un signal brouilleur stable ou fluctuant,
- 27 dB pour un signal utile fluctuant en présence d'un signal brouilleur stable ou fluctuant,
- 8 dB pour un signal utile en présence d'un signal brouilleur provenant d'un émetteur du même réseau synchronisé.

4.4.2 Rapports de protection dans le canal adjacent

4.4.2.1 Lorsqu'il s'agit d'un signal utile stable, les rapports de protection dans le canal adjacent sont les suivants:

Cas A: 9 dB si on utilise une faible compression de la modulation à l'entrée de l'émetteur, telle qu'elle est couramment pratiquée dans les transmissions de bonne qualité, et lorsque la largeur de bande du signal audiofréquence est de l'ordre de 10 kHz;

Pour les émetteurs de puissance nominale égale ou inférieure à 3 kW on pourra éventuellement tenir compte de pertes si l'antenne est courte. Toutefois, ces pertes ne doivent pas dépasser:

⁵ dB si la hauteur de l'antenne est inférieure à 0,1 λ,

² dB si la hauteur de l'antenne est comprise entre 0,1 λ et 0,2 λ .

En outre, dans les zones géographiques cycloniques, telles que l'Organisation météorologique mondiale les définira, la puissance des emetteurs considérée ci-dessus pourra être portée de 3 à 10 kW.

- Cas B: 7 dB si on utilise une forte compression de la modulation à l'aide d'un appareil automatique (au moins 10 dB de plus que dans le cas précédent) et lorsque la largeur de bande du signal audiofréquence est de l'ordre de 10 kHz;
- Cas C: 5 dB si on utilise une faible compression de la modulation et lorsque la largeur de bande du signal audiofréquence est de l'ordre de 4,5 kHz;
- Cas D: 0 dB si on utilise une forte compression de la modulation à l'aide d'un appareil automatique et lorsque la largeur de bande du signal audiofréquence est de l'ordre de 4,5 kHz.

Les valeurs ci-dessus ne sont valables que lorsqu'on applique la même compression aux émissions utile et brouilleuse.

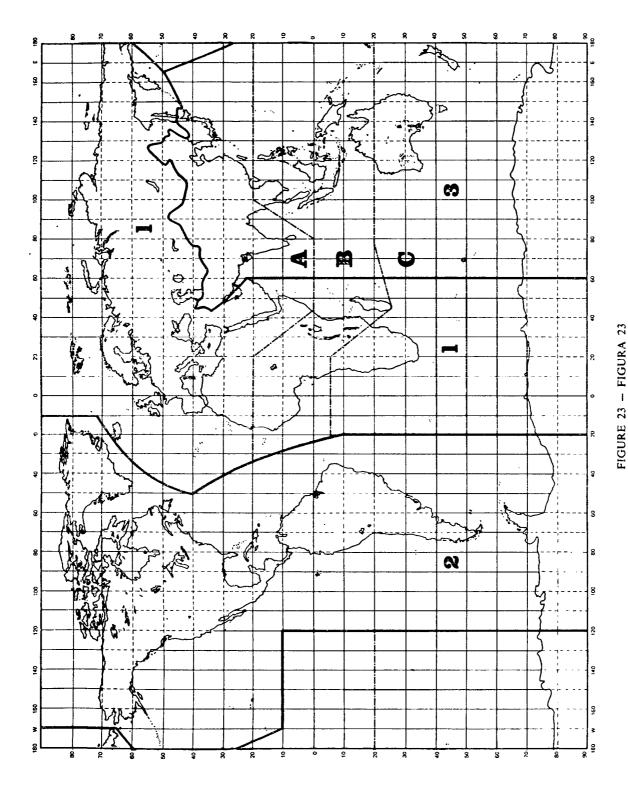

Lorsque deux stations fonctionnent dans des canaux adjacents avec des largeurs de bande ou des compressions différentes, on utilise la valeur la plus élevée des deux rapports de protection correspondants, sauf si les deux administrations concernées décident d'un commun accord d'utiliser chacune le rapport qui correspond au signal brouilleur.

- 4.4.2.2 Dans le cas d'un signal utile fluctuant, les valeurs de rapport de protection mentionnées au paragraphe 4.4.2.1, doivent être réduites de 3 dB.
- 4.5 Valeur minimale du champ
- 4.5.1 La valeur minimale du champ requise afin de dépasser le bruit naturel dans les trois zones A, B et C (pour 1 MHz) a été fixée comme suit:

```
+60 \text{ dB } (\mu\text{V/m}) \text{ dans la zone A}
```

- +63 dB (μ V/m) dans la zone C.
- 4.5.2 Les zones A, B et C des Régions 1 et 3 indiquées sur la figure 23 sont définies comme suit:
- 4.5.2.1 La ligne de séparation entre les zones A et B part du point d'intersection du parallèle 20° N avec la limite ouest de la Région I (numéro 126 du Règlement des radiocommunications, 1959); puis elle suit le parallèle 20° N jusqu'au point d'intersection avec le méridien 20° E, puis l'arc de grand cercle jusqu'au point d'intersection du méridien 44° E avec l'équateur. Elle suit ensuite l'équateur jusqu'au point d'intersection avec le méridien 80° E, puis l'arc de grand cercle jusqu'au point de coordonnées 100° E, 20° N; elle suit enfin le parallèle 20° N jusqu'au point d'intersection avec la limite est de la Région 3 (numéro 128 du Règlement des radiocommunications, 1959). Le territoire de la République Islamique de Mauritanie est entièrement situé dans la zone A.
- 4.5.2.2 La ligne de séparation entre les zones B et C part du point d'intersection du parallèle 6° S avec la limite cuest de la Région 1 (numéro 126 du Règlement des radiocommunications, 1959), puis elle suit le parallèle 6° S jusqu'au point d'intersection avec le méridien 20° E, puis l'arc de grand cercle jusqu'au point de coordonnées 46° E, 26° S, puis l'arc de grand cercle jusqu'au point de coordonnées 80° E, 20° S; elle suit enfin le parallèle 20° S jusqu'au point d'intersection avec la limite est de la Région 3 (numéro 128 du Règlement des radiocommunications, 1959).

^{+ 70} dB (μ V/m) dans la zone B

Carte indiquant les limites des zones A, B et C dans les Régions I et 3 Map showing Boundaries of Zones A, B and C in Regions I and 3 Mapa de las zonas A, B y C en las Regiones I y 3

4.6 Champ nominal utilisable

Les valeurs du champ nominal utilisable sont indiquées dans le tableau ci-dessous en dB (μ V/m).

| | Zone A | Zone B | Zone C |
|---|----------|----------|----------|
| A. Ondes hectométriques Onde de sol le jour | 63 | 73 | 66 |
| Onde de sol la nuit * — zones rurales ** — zones urbaines | 71 77 | 81 87 | 74 80 |
| Canaux pour émetteurs de faible puissance | 88 | 88 | 88 |
| B. Ondes kilométriques *** | 77 | 87 | 80 |
| | | | |

- * Lorsque la puissance de l'émetteur est telle que la zone desservie par l'onde de sol est limitée par les évanouissements dus à l'onde ionosphérique du même émetteur, on peut choisir une valeur du champ nominal utilisable supérieure à celle qui est indiquée dans le tableau. Toutefois cette valeur ne devrait pas être supérieure au champ de l'onde de sol à la limite de la zone d'évanouissement. On admet que la zone d'évanouissement est définie par un rapport de protection entre onde de sol et onde ionosphérique égal au rapport de protection interne d'un réseau synchronisé, soit 8 dB.
- ** Quelques délégations estiment qu'une valeur du champ nominal utilisable de 65 dB (μV/m) convient pour les zones rurales dans leur pays.
- *** Certaines délégations considèrent qu'une valeur de E_{nom} de l'ordre de 73 dB (μV/m) est appropriée dans les zones rurales non tronicales.

4.7 Champ utilisable

En présence d'un ensemble d'émetteurs, le champ utilisable est exprimé par la formule:

$$E_u = \sqrt{\sum_i (a_i E_{ni})^2 + E_{min}^2}$$

ou

 E_{ni} est le champ de l'émetteur brouilleur de rang i (en $\mu V/m$)

 E_{min} est le champ minimal utilisable à la fréquence considérée (en $\mu V/m$) (voir Avis 499, 1974, du C.C.I.R.)

 est le rapport de protection aux fréquences radioélectriques associé à l'émetteur brouilleur de rang i (en valeur numérique)

En l'absence de renseignements sur le bruit artificiel, le champ minimal E_{min} peut être calculé en corrigeant la valeur minimale du champ, telle qu'elle est indiquée au paragraphe 4.5.1, à l'aide de la courbe de la figure 24 qui représente la variation Δa de cette valeur en fonction de la fréquence.

4.8 Canaux pour émetteurs de faible puissance

4.8.1 Le champ résultant d'un réseau d'émetteurs de faible puissance à la limite du territoire de tout autre pays ne doit pas dépasser 0,5 mV/m, sauf accord entre les administrations intéressées. Dans le cas des pays separes par des étendues maritimes, le champ au point milieu du trajet maritime ne devrait pas dépasser, en principe, la valeur de 0,5 mV/m, sauf si les administrations intéressées concluent d'autres arrangements.

4.8.2 Le champ résultant (en mV/m) se calcule au moyen de l'expression:

$$\sqrt{E_1^2 + E_2^2 + E_3^2 + \dots}$$

où E_1 , E_2 , E_3 , ... sont les valeurs (en mV/m) du champ dû à chacun des émetteurs d'un pays qui fonctionnent sur un canal pour émetteurs de faible puissance. Ces valeurs sont déterminées à l'aide de la figure 25 et on ne doit tenir compte, dans ce calcul, que des stations situées à moins de 500 km de la frontière d'un pays voisin ou du milieu d'un trajet maritime.

4.8.3 Dans l'application des dispositions de l'article 4 (paragraphe 3.3.1) de l'Accord, on utilise le tableau ci-dessous:

| f.c.m. (V) | p.a.r.v. (kW) | Valeur limite de la distance (km) | |
|---------------|------------------|--------------------------------------|--|
| 300 | 1,0 | 600 | |
| 260 | 0,75 | 500 | |
| 212 | 0,5 | 400 | |
| 150 | 0,25 | 200, 300* | |
| 95 | 1,0 | 70, 250* | |
| 67 | 0,05 | 50, 200* | |

^{*} Valeurs dans le cas d'un trajet de propagation maritime.

FIGURE 25 - FIGURA 25

Champ en dB ($\mu V/m$) pour une p a r v. de 1 kW ou une f c m de 300 V, dans le plan horizontal Field strength dB ($\mu V/m$) for an e m.r.p. of 1 kW or a c.m.f. of 300 V, in the horizontal plane Intensidad de campo en dB ($\mu V/m$) con relación a 1 kW de p.r.a.v. (f.c m. = 300 V) en el plano horizontal

- 4.9 Tolérances applicables à l'emplacement d'un émetteur
 - Les tolérances applicables à l'emplacement d'un émetteur sont les suivantes:
- 4.9.1 Lorsque l'émetteur brouilleur et l'émetteur brouillé sont situés dans le même canal ou dans des canaux adjacents et se trouvent tous deux dans la partie de la Région 3 au Nord du parallèle 11° S ou lorsqu'un seul de ces emetteurs est situé dans cette partie de la Région 3 mais que le point milieu entre les deux émetteurs est également situé dans cette Région, la tolérance est donnée dans la colonne Δd_t du tableau 1 relatif aux ondes hectometriques.
- 4.9.2 Dans les autres cas, la tolérance est la suivante:
- 4.9.2.1 Pour un émetteur situé à l'intérieur des terres, la valeur limite du déplacement de l'émetteur est donnée dans les colonne Δd_t du tableau 1 ou 2, selon le cas, pour autant que le nouvel emplacement se trouve à une distance de la côte d'au moins 100 km (ondes hectométriques) ou 200 km (ondes kilométriques).
- 4.9.2.2 Lorsque la distance entre l'émetteur et la côte est ou devient inférieure à 100 km (ondes hectométriques) ou a 200 km (ondes kilométriques), si l'émetteur est déplacé, en direction de la mer, vers une station fonctionnant dans le même canal ou dans un canal adjacent, il faut en outre que la distance entre l'émetteur et la côte ne diminue pas de plus de Δd_m (voir le tableau 1 ou 2 selon le cas).

TABLEAU I
Ondes hectométriques

| Distance entre émetteurs (km) | | A 1 (1) | • • • • • |
|-------------------------------|----------------|--|-----------|
| même canal | canal adjacent | $\Delta d_t (km) \qquad \Delta d_m (km)$ | |
| > 1 000 | > 700 | 20 | 2 |
| 500 - 1 000 | 200 - 700 | 10 | 2 |
| < 500 | < 200 | 5 | 2 |

TABLEAU 2

Ondes kilométriques

| Distance entre émetteurs (km) | | A 1 (1) | A 1 (1) |
|-------------------------------|----------------|-------------------|-------------------|
| même canal | canal adjacent | Δd_t (km) | Δd_m (km) |
| > 1 000 | >400 | 20 | 5 |
| ≤ 1 000 | ≤ 400 | 10 | 5 |

PROTOCOLES

PROTOCOLE FINAL*

à

l'Accord régional relatif à l'utilisation par le service de radiodiffusion de fréquences dans les bandes des ondes hectométriques dans les Régions 1 et 3 et dans les bandes des ondes kilométriques dans la Région 1

Au moment de signer l'Accord régional relatif à l'utilisation par le service de radiodiffusion de fréquences dans les bandes des ondes hectométriques dans les Régions 1 et 3 et dans les bandes des ondes kilométriques dans la Région 1, les délégués soussignés prennent acte des déclarations suivantes qui font partie des Actes finals de la Conférence administrative régionale de radiodiffusion à ondes kilométriques et hectométriques (Régions 1 et 3), Genève, 1975:

Nº 1

Pour le Royaume du Maroc:

La délégation du Royaume du Maroc a noté dans les demandes de fréquences traitées par cette Conférence, d'une part deux assignations pour El Ayoun et deux pour Villa Cisneros, et, d'autre part, deux assignations pour Sebta et Melillia, presentees par l'Espagne.

La délégation marocaine est pleinement attachée au principe adopté lors de la première session de la Conférence et qui stipule que tous les pays, grands ou petits, sont égaux en droits.

La délégation marocaine gardant présent à l'esprit les efforts déployés par le Royaume du Maroc tant à l'égard de l'Espagne qu'au sein des instances internationales appropriées pour rétablir le Maroc dans ses droits légitimes sur les parties de son territoire qui demeurent sous domination espagnole.

La délégation du Royaume du Maroc, consciente du caractère purement géographique des assignations de fréquence radioélectrique, déclare que sa participation à l'élaboration du présent Plan pour les Régions 1 et 3 et son acceptation des assignations de fréquences aux stations d'El Ayoun, Villa Cisneros, Sebta et Melillia ne signifient nullement sa renonciation aux revendications formulées par le Gouvernement du Royaume du Maroc sur les parties de son territoire où sont situées ces stations.

Nº 2

Pour l'Espagne:

La délégation de l'Espagne déclare qu'en ce qui concerne la demande d'assignations pour El Aaiun et Villacisneros, elle agit conformément à l'Article 73 de la Charte des Nations Unies, selon le principe de la primauté des intérêts des habitants du Sahara occidental et sans préjuger le résultat du processus de décolonisation en cours.

S'agissant des stations espagnoles de Ceuta et de Melilla, la délégation de l'Espagne affirme que ces deux villes font partie integrante du territoire espagnol et qu'elle n'admet à ce sujet aucune discussion.

^{*} Note du Secrétariat général: Les textes du Protocole final sont rangés par ordre chronologique de leur dépôt. Dans la table des matieres, ces textes sont classés par ordre alphabétique des noms de pays.

Pour la République Islamique de Mauritanie:

La délégation de la République Islamique de Mauritanie a noté dans les demandes de fréquences traitées par cette Conférence, d'une part, deux assignations pour El Aïoun et deux pour Villa Cisneros, présentées par la délégation de l'Espagne.

La délégation de la République Islamique de Mauritanie, notant le fait que ces demandes ne répondent pas quantitativement et qualitativement aux besoins de couverture en radiodiffusion pour cette partie de son territoire et, eu égard au principe adopté par la Conférence selon lequel tous les pays, grands ou petits, sont égaux en droit, considère que ces demandes pourraient être complétées ultérieurement par la République Islamique de Mauritanie, en se conformant aux dispositions prevues pour le traitement des demandes de fréquences des pays non Membres absents à cette Conférence.

La délégation de la République Islamique de Mauritanie, notant le caractère purement géographique des assignations de fréquence, déclare que sa participation à l'élaboration du présent Plan pour les Régions 1 et 3 et son acceptation des assignations de fréquence aux stations de El Aïoun et Villa Cisneros ne signifient nullement sa renonciation aux revendications formulées par le Gouvernement de la République Islamique de Mauritanie sur les parties de son territoire où sont situees ces stations.

Nº 4

Pour la République d'Afghanistan:

La délégation de la République d'Afghanistan réserve à son gouvernement le droit de prendre toutes mesures qu'il pourra juger necessaires pour proteger ses intérêts si d'autres pays n'observent pas les dispositions adoptées par cette Conférence.

Nº 5

Pour l'Algérie (République Algérienne Démocratique et Populaire):

La délégation algérienne, ayant noté les demandes d'assignation de fréquence pour El-Ayoun et Villa Cisneros présentées par la délégation d'Espagne, et tenant compte du processus de décolonisation en cours sous les auspices des Nations Unies, déclare qu'en vertu du principe du droit des peuples à l'autodétermination, toutes dispositions prises par la Conférence concernant le Sahara occidental, ne sauraient, le moment venu, ni affecter ni limiter le peuple sahraoui dans l'exercice de son droit souverain au regard desdites dispositions.

Nº 6

Pour la France:

En ce qui concerne la station de Sud-Radio 819 kHz, les autorités françaises rechercheront avec les Administrations competentes des Vallées d'Andorre les moyens pratiques de réaliser dans la station de Sud-Radio une antenne directive permettant de réduire le rayonnement de cette station dans les directions de Varsovie (secteur compris entre les azimuts 45° et 55°) et de Rabat (secteur compris entre les azimuts 210° et 225°).

Ces dispositions feront l'objet, dans un cadre bilatéral, d'une étude entre les Administrations intéressées en vue de la coordination souhaitée.

N° 7

Pour la République Arabe Syrienne:

A

L'Administration syrienne ne peut accepter l'assignation de fréquence de 666 kHz à un émetteur de radiodiffusion grec rayonnant de nuit une puissance de 250 kW, car il ramène la portée utile de l'émetteur syrien existant à 19 km.

L'Administration syrienne se réserve le droit de prendre toutes les mesures nécessaires pour éviter tout préjudice à ses emissions et aux intérêts économiques qui en dépendent.

R

L'Administration syrienne ne peut accepter l'assignation de la fréquence de 954 kHz à la station turque Trabzon qui reduit à 14 km le rayon de service de l'émetteur syrien du fait d'un brouillage supérieur à 100 dB.

C

L'Administration syrienne ne peut accepter le brouillage nuisible causé par un émetteur bulgare de grande puissance fonctionnant sur 747 kHz.

L'Administration syrienne prie l'Administration bulgare de faire tous ses efforts pour diminuer le niveau de brouillage.

Nº 8

Pour la République Fédérale de Nigeria:

La délégation de la République Fédérale de Nigeria note que, l'Administration de la Grèce ayant projeté de porter à 1 000 kW la puissance de l'assignation inscrite dans le Plan de Copenhague sur la fréquence 729 kHz avec une puissance de 150 kW, des brouillages nuisibles au niveau de 88 dB seront causés aux émissions de la station de Nigeria inscrite sur la même fréquence dans le Plan africain de Genève, 1966.

Il est rappelé que ces brouillages ont été portés à la connaissance de la délégation de la Grèce et à celle de l'I.F.R.B., et que l'Administration de la Grèce a été invitée à prendre des mesures en vue de réduire les brouillages en question.

Etant donné que le niveau des brouillages causés à l'assignation de Nigeria sur cette fréquence est demeuré inchangé, la République Fédérale de Nigeria se réserve le droit d'accroître la puissance et d'orienter dans une direction quelconque le faisceau de rayonnement émis sur la fréquence en question afin de réduire les brouillages, sans nouvelle consultation avec la Grèce.

Nº 9

Pour l'Ethiopie:

La délégation de l'Ethiopie réserve pour son gouvernement le droit de prendre toutes mesures qu'il jugera nécessaires pour proteger la couverture de son service de radiodiffusion national si d'autres pays ne respectent pas les dispositions techniques adoptées par cette Conférence en vue de réduire les brouillages à un minimum.

Nº 10

Pour la Nouvelle-Zélande:

Δ

La Nouvelle-Zélande se réserve le droit de prendre toutes mesures qu'elle jugerait nécessaires pour protéger ses interêts si un autre pays Membre ne respectait pas les dispositions de l'Accord régional relatif à l'utilisation par le service de radiodiffusion de fréquences dans les bandes des ondes hectométriques dans les Régions 1 et 3 et dans les bandes des ondes kilométriques dans la Région 1, ou ne respectait pas les dispositions des Annexes ou des Protocoles joints à cet Accord, ou si les réserves faites par d'autres pays portaient préjudice aux services de radiodiffusion de la Nouvelle-Zélande.

B

Le Royaume des Tonga se réserve le droit de prendre toutes mesures qu'il jugerait nécessaires pour protéger ses interêts si un autre pays Membre ne respectait pas les dispositions de l'Accord régional relatif à l'utilisation par le service de radiodiffusion de fréquences dans les bandes des ondes hectométriques dans les Régions 1 et 3 et dans les bandes des ondes kilométriques dans la Région 1, ou ne respectait pas les dispositions des Annexes ou des Protocoles joints à cet Accord, ou si les réserves faites par d'autres pays portaient préjudice aux services de radiodiffusion du Royaume des Tonga.

Pour le Royaume-Uni de Grande-Bretagne et d'Irlande du Nord:

Α

Afin de contribuer au succès de la Conférence, le Royaume-Uni a limité ses demandes au minimum nécessaire pour maintenir la couverture de ses services existants. Dans cet esprit, le Royaume-Uni a également déclaré, dans un document annexe a sa demande, qu'en cas d'accroissement du brouillage causé à ses services, il sera peut-être nécessaire d'augmenter la puissance d'émission jusqu'à un niveau supérieur à celui indiqué dans la demande.

В

Les brouillages causés aux services du Royaume-Uni augmenteront considérablement du fait de la mise en service de nouveiles stations sur 648 kHz, principalement en Albanie, et du fait de l'augmentation notable de la puissance par ce même pays sur la fréquence 1 089 kHz. Devant le refus de négocier, opposé par l'Albanie, le Royaume-Uni se réserve le droit d'effectuer les augmentations de puissance qu'il jugera nécessaires pour maintenir la couverture assurée actuellement sur les fréquences 648 et 1 089 kHz.

Nº 12

Pour la France:

Concernant l'assignation accordée à la France pour la station de Sarrelouis (Europe I) 182 kHz – 2 000 kW, la délégation française précise que le problème des brouillages importants produits dans la zone de service de la station de Sarrelouis par la station d'Oranienburg, située en République Démocratique Allemande, n'a pas reçu de solution satisfaisante pendant la durée des travaux de la Conférence. Il a été convenu entre les pays intéressés par l'utilisation de ce canal qu'ils continueraient à rechercher une solution après la fin de la Conférence.

Nº 13

Pour Fidji:

La délégation de Fidji réserve pour son gouvernement le droit de prendre toutes mesures qu'il pourra juger nécessaires pour proteger ses intérêts si un pays Membre ne respectait pas les dispositions énoncées dans l'Accord régional relatif à l'utilisation par le service de radiodiffusion de fréquences dans les bandes des ondes hectométriques dans les Régions 1 et 3, ou dans les Annexes ou Protocoles joints à cet Accord, ou si les réserves formulées par d'autres pays devaient porter préjudice au service de radiodiffusion de Fidji.

Nº 14

Pour la République Unie du Cameroun:

La délégation de la République Unie du Cameroun déclare que son Administration se réserve le droit de prendre toutes mesures utiles en vue de sauvegarder ses intérêts si les réserves émises par d'autres délégations au nom de leurs administrations ou le non-respect de l'Accord et de ses Annexes ainsi que des Protocoles y attachés tendaient à compromettre la bonne marche de son service de radiodiffusion.

Nº 15

Pour la France et la Grèce:

Les Administrations française et grecque sont convenues de procéder ultérieurement à une étude coordonnée en vue de réduire les brouillages réciproques de leurs stations sur les fréquences 792 kHz, 945 kHz, 1 350 kHz, 1 404 kHz et 1 494 kHz.

Pour la République de Côte d'Ivoire:

La délégation de la République de Côte d'Ivoire déclare qu'elle réserve le droit de son gouvernement d'accepter ou de refuser toutes réserves ou déclarations formulées dans les Actes finals de la Conférence administrative régionale de radiodiffusion à ondes kilométriques et hectométriques (Régions 1 et 3), Genève, 1975 et qui pourraient entraîner des modifications ou brouillages de ses services de radiodiffusion.

Nº 17

Pour la Grèce:

La délégation de Grèce constate qu'un nombre très élevé de demandes d'assignation, dont une partie se situe dans les canaux utilisés par la Grèce en conformité avec la Convention et le Plan de Copenhague, est en mesure de créer à l'Administration hellénique des problèmes particulièrement délicats.

La Conférence régionale de radiodiffusion n'ayant permis ni l'élaboration d'un plan basé sur des principes techniques ni la coordination satisfaisante des demandes d'assignation, l'Administration hellénique voit la zone de service de ses emetteurs subir une réduction très sérieuse. Elle se doit en conséquence de prendre toutes les mesures nécessaires afin de les proteger. En particulier, pour ce qui est de la fréquence 729 kHz, l'Administration hellénique se réserve le droit de procéder, entre autres, à une augmentation de la puissance de l'émetteur d'Athènes, dans le cas où un accord avec l'Administration des Emirats Arabes Unis s'avérerait impossible ou n'aboutirait pas à un changement de la fréquence revendiquée par l'Administration en question.

Pour ce qui est des largeurs des bandes, l'Administration hellénique se réserve également le droit d'en utiliser qui sont superieures a 9 kHz, en cas où les émetteurs grecs seraient brouillés par des émissions de canaux adjacents, ayant une largeur supérieure à 9 kHz.

Nº 18

Pour la République Démocratique Allemande:

La délégation de la République Démocratique Allemande a l'honneur de déclarer — à l'occasion de la signature de l'Accord régional relatif à l'utilisation par le service de radiodiffusion de fréquences dans les bandes des ondes hectométriques dans les Régions 1 et 3 et dans les bandes des ondes kilométriques dans la Région 1, et à propos de l'indication des fréquences pour les stations exploitées à Berlin (Ouest) — qu'elle tiendra compte des dispositions correspondantes dans la mesure seulement où elles seront conformes à l'Accord Quadripartite du 3 septembre 1971.

Nº 19

Pour l'Union des Républiques Socialistes Soviétiques:

La délégation de l'Union des Républiques Socialistes Soviétiques a l'honneur de déclarer – à l'occasion de la signature de l'Accord régional relatif à l'utilisation par le service de radiodiffusion de fréquences dans les bandes des ondes hectométriques dans les Régions 1 et 3 et dans les bandes des ondes kilométriques dans la Région 1, et à propos de l'indication des fréquences pour les stations exploitées à Berlin (Ouest) – qu'elle tiendra compte des dispositions correspondantes dans la mesure seulement où elles seront conformes à l'Accord Quadripartite du 3 septembre 1971.

Nº 20

Pour Maurice:

La délégation de Maurice réserve à son gouvernement le droit de prendre toutes les mesures qu'il estimera nécessaires pour proteger ses interêts si des Membres n'observaient pas, de quelque manière que ce soit, les dispositions de la Conférence administrative régionale de radiodiffusion à ondes kilométriques et hectométriques (Régions 1 et 3), Genève, 1975 ou si des reserves formulées par d'autres pays compromettaient le bon fonctionnement de ses services de radiodiffusion.

Pour l'Algérie (République Algérienne Démocratique et Populaire):

La délégation de la République Algérienne Démocratique et Populaire réserve à son gouvernement le droit de prendre toutes mesures nécessaires pour protéger ses intérêts relatifs à son service de radiodiffusion.

Nº 22

Pour l'Australie:

La délégation de l'Australie réserve à son gouvernement le droit d'utiliser les trois canaux désignés comme «canaux pour emetteurs de faible puissance» pour des services de radiodiffusion à ondes hectométriques employant une p.a.r.v. de plus de 1 kW (c'est-à-dire une f.c.m. de plus de 300 V), mais en respectant en même temps les limites de brouillage fixées pour lesdits canaux, conformément à la définition donnée au paragraphe 4.8 de l'Annexe 2 de l'Accord.

Nº 23

Pour le Pakistan:

Considérant

que, d'une manière générale, il a été impossible de respecter les normes de qualité fixées par la première session de la Conférence, en raison du nombre excessif de demandes qui ne peut qu'aggraver les brouillages causés aux assignations déjà utilisées par le Pakistan, alors que celles-ci bénéficient actuellement d'une situation relativement satisfaisante;

que certains pays ont demandé un très grand nombre d'émetteurs destinés à fonctionner exclusivement pendant ce que l'on appelle la période de jour;

que la seule manière admissible d'exploiter ces émetteurs est de respecter strictement le principe selon lequel ils ne doivent pas causer de brouillage aux autres pays;

que la Conférence administrative mondiale des radiocommunications de 1979 réexaminera probablement le Tableau d'attribution des bandes de fréquences du Règlement des radiocommunications;

qu'il se peut que ladite Conférence attribue la bande des ondes kilométriques au service de radiodiffusion dans la Région 3;

le Pakistan

n'accepte aucune des obligations stipulées dans l'Accord dans la mesure où celles-ci se rapportent aux assignations du Plan pour lesquelles le fonctionnement est limité aux heures de jour et la colonne d'«Observations » ne fait mention d'aucun engagement selon lequel ces assignations ne seront exploitées qu'à condition de ne causer aucun brouillage à d'autres pays;

n'admet pas que les assignations dans la bande des ondes kilométriques figurant dans le Plan aient priorité sur les demandes que les pays de la Région 3 pourront présenter au moment où le Plan d'utilisation des ondes kilométriques sera reexamine par la future Conférence;

se réserve le droit de prendre toute mesure qu'il jugera nécessaire pour protéger ses intérêts, dans le cas où les autres pays n'observeraient pas les dispositions de l'Accord et du Plan.

Nº 24

Pour la Belgique:

L'Administration belge rappelle qu'elle avait demandé une assignation en ondes kilométriques. En vue d'un aboutissement heureux de la planification, elle a accepté de combiner sa demande avec celle des Pays-Bas. De ce fait, la fréquence de 173 kHz, attribuée à ce dernier pays, sera également utilisée pour l'émission de programmes belges.

Cependant cette solution (173 kHz) est loin d'être satisfaisante. En effet:

- le soir, le champ utilisable est supérieur à 100 dB, ce qui réduit très fortement la zone de service;
- le jour, il est fort probable qu'une protection satisfaisante ne sera pas toujours assurée vis-à-vis des stations françaises utilisant les canaux adjacents.

L'Administration belge espère néanmoins qu'il lui sera possible de réaliser un service acceptable dans ce canal; mais elle se réserve le droit, si l'expérience le rendait nécessaire et tout en se conformant aux dispositions prévues dans le présent Accord, d'utiliser la fréquence 281 kHz, au cas où la bande partagée 255-285 kHz serait mise à la disposition du service de radiodiffusion.

Nº 25

Pour le Royaume de l'Arabie Saoudite et la République Socialiste Fédérative de Yougoslavie:

Les deux Administrations sont convenues de ce qui suit:

- 1. Le diagramme approprié, figurant dans les Actes finals de la Conférence, a servi de base à l'horaire de fonctionnement de l'émetteur du Royaume de l'Arabie Saoudite exploité de jour sur la fréquence de 612 kHz. En conséquence, cet émetteur figurera dans le Plan avec l'horaire de fonctionnement indiqué ci-après:
 - a) du 1er avril au 31 octobre: de 0300 à 1600 TMG
 - b) du 1er novembre au 31 mars: de 0500 à 1400 TMG.
- 2. Les deux Administrations sont prêtes à coopérer pour rechercher de nouvelles améliorations de la solution indiquée, afin de donner satisfaction aux deux parties et de répondre à leurs besoins.

Nº 26

Pour le Liban:

Le champ utilisable résultant du brouillage qui peut être causé à toutes les fréquences assignées au nom du Liban dans le Plan étant très élevé, l'Administration libanaise se réserve le droit de prendre les dispositions utiles et indispensables pour ameliorer la protection de ses émissions.

Nº 27

Pour la République de Corée:

- 1. La délégation de la République de Corée, au nom du gouvernement coréen, réserve à celui-ci le droit de prendre les dispositions qu'il pourra juger nécessaires pour sauvegarder ses services de radiodiffusion:
 - a) dans le cas où une assignation de fréquence inscrite dans le Plan sans avoir fait au préalable l'objet d'une consultation avec la délégation coréenne causerait un brouillage nuisible dans les canaux assignés dans le Plan à la République de Corée;
 - b) dans le cas où un Membre partie à l'Accord manquerait à se conformer aux termes de celui-ci, du Plan ou des Protocoles y annexés, perturbant ainsi les services de radiodiffusion coréens; ou
 - c) dans le cas où par suite de réserves formulées par d'autres pays, l'efficacité des services de radiodiffusion coréens serait compromise.
- 2. De plus, dans le cas où la Conférence n'accepterait pas d'inscrire dans le Plan les fréquences de certains de ses emetteurs déjà en service, la délégation se réserve le droit de transférer ces fréquences, avec la même puissance, dans les plus proches des nouveaux canaux, et cela tout en respectant les limites de brouillage fixées par l'Accord.

Pour la République de l'Ouganda:

L'Administration de la République de l'Ouganda ne peut accepter la proposition tendant à faire passer de 100 kW à 500 kW la puissance d'une station de radiodiffusion située à Chypre et exploitée par le Royaume-Uni sur la fréquence 639 kHz; le changement porte en effet le champ utilisable d'une station exploitée par l'Ouganda et inscrite dans le Plan africain (Genève, 1966) à 97 dB, réduisant ainsi d'une façon inacceptable la distance utilisable.

C'est pourquoi, dans ces conditions, l'Administration de la République de l'Ouganda se réserve le droit d'accroître la puissance de sa station émettant sur la fréquence de 639 kHz et/ou d'utiliser une antenne directive pour tenir compte de l'augmentation des brouillages et afin d'assurer, sur le territoire de l'Ouganda, un service de radiodiffusion auquel le peuple ougandais a légitimement droit.

Nº 29

Pour le Royaume de l'Arabie Saoudite et la République Unie de Tanzanie:

Le Royaume de l'Arabie Saoudite et la République Unie de Tanzanie,

reconnaissant

la nécessité d'étudier plus avant les assignations des fréquences 531 kHz et 648 kHz sur lesquelles le second de ces pays subit, dans le même canal, un brouillage important cause par le premier;

feront tout leur possible, en organisant des discussions bilatérales après la Conférence pour parvenir à une solution satisfaisante.

Au cas où ces discussions n'aboutiraient pas, la République Unie de Tanzanie se réserve le droit d'accroître sa puissance de manière à assurer la couverture satisfaisante de son territoire.

Nº 30

Pour la Grèce:

La délégation de Grèce souhaite que les remarques suivantes soient insérées à la colonne du Plan destinée aux observations:

- a) Il est souhaitable que les Administrations de Grèce et des Emirats Arabes Unis procèdent à une étude coordonnée des problèmes qui résulteront du fonctionnement éventuel de la station de Sadiyat sur la fréquence 729 kHz, qui, depuis le Plan de Copenhague, fut celle de la station d'Athènes.
- b) Pour ce qui est de la fréquence 1 260 kHz, l'Administration hellénique souhaite examiner conjointement avec l'Administration de Pologne les modalités de réduire le champ total du réseau synchronisé de Pologne en direction de la Grèce, afin d'avoir à Rhodes 85 dB.
- c) Il est également souhaitable qu'une étude coordonnée soit entamée entre l'Administration hellénique et celle d'Italie en vue de réduire les brouillages réciproques de leurs stations sur les fréquences 1 008 et 1 116 kHz.

Nº 31

Pour la République du Sénégal:

La délégation de la République du Sénégal réserve le droit à son gouvernement de prendre toutes mesures jugées utiles afin de sauvegarder la couverture de son service national de radiodiffusion si d'autres pays n'observaient pas les dispositions adoptées par la présente Conférence.

Pour l'Etat de la Cité du Vatican:

La délégation de l'Etat de la Cité du Vatican, au terme de la Conférence, constate avec regret que le Plan annexé à l'Accord ne correspond pas aux critères établis lors de la première session et que, en particulier, la considération fondamentale de «conserver et, éventuellement, améliorer, dans la mesure du possible, la couverture des stations de radiodiffusion existantes en tenant compte des obligations d'un grand nombre de pays » (Rapport lère session p. 24) n'a pas été respectée.

En fait, l'Etat de la Cité du Vatican a exploité jusqu'à maintenant un service par onde ionosphérique, qui lui est essentiel, en accord avec plusieurs pays grâce à l'assignation par le Plan de Copenhague de la fréquence de 1 529 (1 530) kHz; dans la situation créée par le nouveau Plan il ne pourra continuer ce service que dans des conditions beaucoup plus défavorables.

En ce qui concerne certains problèmes plus difficiles qui restent à résoudre, l'Administration de l'Etat de la Cité du Vatican envisage de continuer les négociations avec les administrations intéressées dans le but d'atteindre une solution moins défavorable.

Nº 33

Pour la République Socialiste Fédérative de Yougoslavie:

Etant donné que pendant la Conférence les principes de planification adoptés par la première session et réaffirmés par la deuxième session, n'ont pas été concrètement appliqués, le Plan ne satisfait pas entièrement les besoins justifiés et reconnus de certaines administrations, en particulier celles des pays en voie de développement, ainsi que de pays qui se trouvent dans une situation particulière; il n'est donc conforme ni à l'esprit, ní à la lettre du Chapitre 9 du Rapport de la première session.

Etant un pays fédéral, multinational dans lequel plusieurs langues sont en usage, la Yougoslavie a organisé ses services de radiodiffusion en tenant notamment compte des subdivisions administratives et du nombre de langues utilisées.

En outre, la Yougoslavie a une position géopolitique particulière: étant située au centre d'une sous-région européenne de radiodiffusion, elle est entourée d'un grand nombre de pays; la configuration de son sol est très défavorable, son littoral est long et très découpé, avec des îles très nombreuses.

En raison de sa situation géographique la Yougoslavie est exposée à l'influence des émetteurs de radiodiffusion de plus de 45 pays ce qui, compte tenu des méthodes de planification appliquées par la Conférence, rend toute coordination extrêmement difficile.

De plus, il n'a pas été tenu compte du fait que la Yougoslavie n'a pas présenté de demandes d'assignation dans la bande des ondes kilométriques, ce qui augmente inévitablement ses besoins dans la bande des ondes hectométriques.

Le résultat définitif qui apparaît clairement dans les solutions adoptées, montre que les besoins justifiés de la Yougoslavie, et plus particulièrement de certaines parties de son territoire, n'ont pas été satisfaits.

Tout en se félicitant des efforts déployés par les participants à la Conférence en vue d'améliorer une situation difficile dans la partie intéressée du spectre des fréquences, la Yougoslavie continuera, pour sa part, à s'efforcer de résoudre, par des negociations bilatérales ou multilatérales, les problèmes en suspens.

Cependant, dans l'esprit des principes adoptés à la Conférence, la Yougoslavie se réserve le droit de protéger ses intérêts dans le domaine de la radiodiffusion et de prendre au besoin toute mesure qu'elle jugera utile et opportune.

Nº 34

Pour la République Socialiste Fédérative de Yougoslavie:

La délégation de la République Socialiste Fédérative de Yougoslavie, en signant le Plan d'assignations de fréquence, regrette de ne pas avoir eu la possibilité d'arriver à un compromis avec la délégation de l'Espagne concernant la protection de:

 la fréquence 684 (683) kHz, assignée à la station de Belgrade comme une fréquence exclusive et qui est entrée en vigueur depuis le Plan de Copenhague;

- la fréquence 1 134 (1 133) kHz, assignée à la station de Zagreb comme une fréquence exclusive et qui est entrée en vigueur depuis le plan de Copenhague;
- la fréquence 918 (917) kHz, assignée à la station de Ljubljana comme une fréquence exclusive et qui est entrée en vigueur depuis le Plan de Copenhague.

La délégation de la Yougoslavie, d'autre part, constate avec regret que l'Administration de l'Espagne, au moment de la mise en service de la fréquence 684 (683) kHz à sa station de Séville, de la fréquence 1 134 (1 133) kHz à son réseau de station synchronisée et de la fréquence 918 (917) kHz à sa station d'Ovido n'ait pas coordonné avec l'Administration yougoslave et qu'une telle coordination n'ait pas eu lieu jusqu'à la Conférence.

Le fait que la puissance de la station de Séville a été augmentée successivement a forcé l'Administration yougoslave de procéder à l'augmentation de la puissance de sa station de Belgrade pour se protéger du brouillage nuisible causé par la station de Séville et ceci, surtout, du fait de la proximité de ces deux stations.

Vu ceci, la République Socialiste Fédérative de Yougoslavie se réserve le droit de réexaminer cette question avec l'Administration de l'Espagne après la Conférence en souhaitant de pouvoir parvenir à un accord.

Nº 35

Pour la République Socialiste Tchécoslovaque:

En signant l'Accord avec le Plan y annexé, la délégation tchécoslovaque déclare qu'elle ne peut pas consentir à l'assignation:

- a) de la fréquence 702 kHz aux stations d'Andorre, 600 kW, et d'Umraniye, 150 kW (Turquie) pour l'exploitation pendant les heures de nuit, étant donné que ces émetteurs, qui sont exploités sans que les dispositions convenues à l'échelle internationale sur la coordination, l'enregistrement et l'utilisation des fréquences soient respectées, réduisent sérieusement la zone couverte par le réseau tchécoslovaque synchronisé travaillant sur cette fréquence déjà depuis des dizaines d'années;
- b) de la fréquence 954 kHz pour l'utilisation pendant les heures de nuit à la station de Trabzon, 300 kW (Turquie), qui n'est pas encore en service, étant donné que l'exploitation de cette station réduirait à 50% la zone couverte actuellement par un autre réseau synchronisé tchécoslovaque.

La délégation tchécoslovaque réserve à son pays le droit de prendre toute mesure technique nécessaire afin d'assurer un service de radiodiffusion satisfaisant dans les régions tchécoslovaques concernées.

En même temps, l'espoir est exprimé que par la voie de discussions supplémentaires avec les pays intéressés il sera possible de trouver des solutions acceptables aux problèmes en question.

Nº 36

Pour la République Islamique de Mauritanie:

La délégation de la République Islamique de Mauritanie réserve à son gouvernement le droit de prendre toute mesure qu'il pourra juger nécessaire pour protéger ses intérêts si d'autres pays n'observent pas les dispositions adoptées par la présente Conférence.

Nº 37

Pour la République du Niger:

La délégation de la République du Niger réserve à son gouvernement le droit de prendre toute mesure qu'il jugerait necessaire pour protéger ses intérêts si d'autres pays n'observaient pas les dispositions adoptées par la présente Conférence.

Pour la Turquie:

Α

La délégation de la Turquie regrette que la Conférence n'ait pas répondu de façon positive à l'appel qui lui a été adressé en vue de réduire le nombre excessif des demandes de fréquences; elle regrette aussi que les critères adoptés lors des premiere et deuxième sessions de la Conférence n'aient pas été dûment pris en considération au cours des négociations.

En dépit de la faible densité de puissance des émetteurs de Turquie, la délégation turque, faisant preuve de bonne volonté et d'un esprit de coopération internationale, espérant aussi voir la Conférence aboutir à un Plan utilisable, a fait de nombreuses concessions, telles que des annulations de demandes, des réductions de puissance, et l'emploi aussi étendu que possible de réseaux synchronisés et d'antennes directives. Malgré ces concessions, il a été impossible d'élaborer un Plan qui donne satisfaction à la Turquie; en effet, la plupart de ses stations ont un champ utilisable très supérieur à la valeur nominale comprise entre 90 et 100 dB et qui dépasse 100 dB pour un nombre appréciable de celles-ci. Sous sa forme actuelle, le Plan n'est ni équitable, ni applicable. Il est loin d'assurer à la Turquie des conditions de réception satisfaisantes.

Dans ces circonstances, la délégation de la Turquie réserve formellement à son gouvernement le droit de prendre toute mesure qu'il pourrait juger nécessaire en vue de sauvegarder ses intérêts nationaux dans le domaine de la radiodiffusion à ondes kilométriques et hectométriques et d'assurer à la population turque des conditions de réception satisfaisantes.

R

En particulier, la délégation de la Turquie ne peut accepter les faits ci-dessous mentionnés, qui donnent lieu à des champs utilisables élevés et limitent considérablement la zone de service des émetteurs:

- a) protection insuffisante résultant de l'assignation de la fréquence 200 kHz à l'Egypte;
- b) puissance portee a 400 kW pour la station roumaine de Timisoara, exploitée sur 630 kHz;
- c) puissance globale portée à 1 000 kW pour le réseau synchronisé tchécoslovaque exploité sur 702 kHz;
- d) assignation de la fréquence 702 kHz à la Syrie;
- e) puissance portee a 150 kW pour la station égyptienne d'Abu Zabal exploitée sur 1 062 kHz;
- f) assignation des fréquences 1 215 et 1 557 kHz à Malte.

La délégation de la Turquie demande aux Administrations des pays susmentionnés de prendre les mesures nécessaires a la prévention des brouillages. Toutefois, si lesdites Administrations n'en faisaient pas ainsi, la délégation de la Turquie reserve a son gouvernement le droit de prendre les dispositions qu'il pourrait juger nécessaires afin que les stations turques défavorablement influencées par les brouillages puissent assurer une couverture satisfaisante.

Nº 39

Pour la Tunisie:

- 1. En ce qui concerne la fréquence 585 kHz commune à l'Autriche, à l'Espagne et à la Tunisie, l'Administration tunisienne, non satisfaite du niveau élevé des brouillages nuisibles, est disposée à étudier toute solution technique susceptible d'améliorer la situation dans les trois pays sur la base du principe de l'égalité des droits entre tous les pays.
- 2. En ce qui concerne la fréquence 630 kHz, l'Administration de la Tunisie enregistre avec satisfaction les bonnes dispositions de l'Administration de la Turquie en vue d'améliorer la situation conformément à la traditionnelle amitié qui lie les deux pays.
- 3. En ce qui concerne la fréquence 963 kHz, commune à la Bulgarie, à Chypre et à la Tunisie, l'Administration tunisienne n'accepte pas le niveau des brouillages nuisibles mais ne doute pas que la protection promise par les délégations de la Bulgarie et de Chypre améliorera la situation.

En tout état de cause, l'Administration tunisienne se réserve le droit de sauvegarder ses intérêts en matière de radiodiffusion.

Pour le Japon:

En signant les Actes finals de la présente Conférence, la délégation du Japon désire faire la déclaration suivante:

1. La présente Conférence a adopté un Accord régional concernant l'utilisation par le service de radiodiffusion de fréquences dans les bandes des ondes hectométriques dans les Régions 1 et 3 et dans les bandes des ondes kilométriques dans la Région 1.

Il est à prévoir que, en la matière, l'application des décisions de la Conférence va soulever de nombreuses difficultés, en particulier du fait des brouillages nuisibles causés par des stations de radiodiffusion très puissantes, installées dans des pays voisins du Japon et pour lesquelles la procédure de coordination n'a pu être menée à bien pendant la Conférence.

La Japon fera tous ses efforts pour exploiter son service de radiodiffusion conformément aux dispositions de l'Accord et du Plan y annexé, en coopérant avec tous les autres pays Membres intéressés; toutefois la délégation du Japon réserve à son Administration le droit de prendre toute mesure qu'elle jugera nécessaire, en ce qui concerne les questions qui n'ont pu être resolues au cours de la Conférence, afin d'assurer la protection de son service de radiodiffusion à ondes hectométriques.

2. Les brouillages causés par certaines stations de radiodiffusion de la Région 1 exploitées dans la bande des ondes kilometriques (150-285 kHz) entravent le fonctionnement des radiophares aéronautiques du Japon. Ces brouillages ne disparaîtront pas apres la mise en œuvre du Plan relatif à l'utilisation par le service de radiodiffusion de fréquences dans les bandes des ondes kilométriques dans la Région 1 tel qu'il a été établi par la Conférence.

La délégation du Japon réserve en consequence le droit de son gouvernement de prendre les mesures nécessaires, conformément aux dispositions de la Convention et du Règlement des radiocommunications, pour protéger les radiophares de son pays contre les brouillages causés par les stations de radiodiffusion à ondes kilométriques de la Région 1.

Nº 41

Pour la République Socialiste de Roumanie:

La délégation de la République Socialiste de Roumanie, en appréciant les efforts déployés par les délégations participant à la Conférence en vue de l'établissement d'un plan d'assignations de fréquence qui corresponde aux critères techniques et aux décisions unanimes acceptées pendant les première et deuxième sessions et qui puisse satisfaire les besoins de développement du service de radiodiffusion dans les pays participants, constate que dans le Plan, dans les canaux 558 kHz, 603 kHz, 855 kHz, 1 053 kHz et 1 458 kHz utilisés depuis des dizaines d'années par la République Socialiste de Roumanie figurent des assignations qui déterminent une réduction importante des zones de service des émetteurs roumains qui fonctionnent conformément au Règlement des radiocommunications dans ces canaux.

La délégation de la République Socialiste de Roumanie exprime son regret que les négociations entreprises pendant les travaux de la Conférence avec les délégations des pays dont les assignations susmentionnées ont mené à cette situation n'ont pas abouti à des résultats favorables; elle est convaincue que les problèmes en question peuvent être résolus par des negociations qui continueront après la Conférence. La délégation de la République Socialiste de Roumanie est prête à poursuivre la collaboration avec ces pays afin d'atteindre des solutions négociées pour la réduction du niveau des brouillages nuissibles.

En même temps la délégation roumaine déclare qu'elle réserve le droit du gouvernement roumain de prendre les mesures necessaires, dans le cas où les négociations n'auraient pas conduit à des résultats favorables, jusqu'à l'entrée en vigueur du présent Accord, afin que ses émetteurs de radiodiffusion en fonction dans les canaux susmentionnés asurent la couverture du territoire du pays avec des programmes de radiodiffusion dans les conditions appropriées.

Nº 42

Pour la République du Dahomey:

La délégation de la République du Dahomey a l'honneur de déclarer que son gouvernement se réserve le plein droit de prendre toutes dispositions et mesures qu'il jugera utiles en vue de protéger ses intérêts au cas où des réserves émises par d'autres délégations au nom de leur gouvernement, ou administration, ou le non respect par d'autres administrations ou gou vernements de l'Accord, de ses Annexes, Appendices, des Protocoles y attachés, ainsi que des autres engagements vis-à-vis du Dahomey, seraient de nature à compromettre la bonne marche de son service de radiodiffusion.

Pour le Luxembourg:

Le Luxembourg se réserve le droit de prendre toutes mesures qu'il jugerait nécessaires pour protéger ses intérêts si un autre pays Membre ne respectait pas les dispositions de l'Accord régional relatif à l'utilisation par le service de radiodiffusion de fréquences dans les bandes des ondes hectométriques dans les Régions 1 et 3 et dans les bandes des ondes kilométriques dans la Région 1, ou ne respectait pas les dispositions des Annexes ou des Protocoles joints à cet Accord, ou si les réserves faites par d'autres pays portaient préjudice aux services de radiodiffusion du Luxembourg.

Nº 44

Pour la République Populaire de Pologne:

La délégation polonaise formule une réserve quant aux émissions indésirables et brouillages causés sur le territoire de la République Populaire de Pologne par la station de Holzkirchen (D) sur la fréquence de 720 kHz (actuellement utilisant la fréquence de 719 kHz) et réserve le droit à son gouvernement d'entreprendre des mesures appropriées pour protéger les interets souverains de la République Populaire de Pologne.

Nº 45

Pour le Portugal:

La délégation portugaise,

rappelant

que son Administration a déclaré, à l'égard de la puissance des émetteurs précisée dans les fiches de demande portugaises, que cette puissance a ete déterminée d'après la zone à desservir et qu'elle souhaitait s'en tenir à cette puissance minimale mais, cependant, se réservant le droit d'augmenter cette valeur si d'autres pays demandaient des puissances excessives entraînant une diminution de cette zone de service;

qu'elle a déclaré, en séance plénière, que les services de radiodiffusion de son pays en ondes kilométriques et hectométriques n'étaient pas suffisamment développés, en attendant les résultats de la Conférence;

les décisions prises par la deuxième session de la Conférence, en séance plénière, pour tenir compte, dans les travaux de planification, de cas particuliers pour des pays dont les services de radiodiffusion ne sont pas suffisamment développés;

considérant

que les demandes portugaises ont été limitées au minimum nécessaire pour assurer la couverture satisfaisante de son territoire:

que les décisions ci-dessus, adoptées en séance plénière, n'ont pas été appliquées avec succès dans les travaux de planification de la Conférence:

les valeurs très élevées, par rapport aux valeurs nominales adoptées à la première session de la Conférence, des champs utilisables des assignations de fréquence portugaises figurant au Plan et les zones de service trop réduites qui en resultent pour ces assignations;

reserve pour son pays

le droit de prendre toutes les mesures qui s'avéreront nécessaires pour assurer une qualité satisfaisante à ses services de radiodiffusion dans les bandes d'ondes kilométriques et hectométriques avec le seul engagement, lorsqu'une nouvelle assignation est faite ou qu'une assignation figurant au Plan est modifiée, de ne pas accorder aux assignations d'autres pays qui fonctionnent dans le même canal ou dans les canaux adjacents, des protections inférieures à la valeur minimale de la protection des zones de service nominales des assignations figurant au Plan.

Pour l'Espagne:

La délégation de l'Espagne:

considérant:

- 1. que les champs utilisables déterminés pour la quasi totalité de ses émetteurs sont très supérieurs aux champs nominaux définis au paragraphe 4.6 de l'Annexe 2 à l'Accord;
- 2. que, en conséquence, les zones de service calculées au moment de présenter les demandes de l'Espagne se trouvent reduites au point qu'il n'est plus possible d'assurer, pour une grande partie de la population espagnole, des conditions de reception satisfaisantes;
- 3. que, en presentant ses demandes, elle a déclaré se réserver le droit d'augmenter, pendant la Conférence, les valeurs des puissances demandées, au cas où d'autres pays demanderaient, dans les canaux correspondants, des puissances qui entraîneraient une reduction des zones de service des émetteurs espagnols (Note N° A020 de l'annexe 3 à la lettre-circulaire N° 324 de l'I.F.R.B. en date du 23 mai 1975), ce qui s'est en fait produit sans que la délégation de l'Espagne ait pu donner suite a la réserve spécifique qu'elle avait formulée;
- 4. que, le Plan a été établi sans respecter le principe d'équité approuvé par la Conférence elle-même, selon lequel tous les pays grands et petits ont les mêmes droits, et que ce fait tient à l'absence de normes et de règles efficaces conduisant à une planification équitable, ce qui, selon la délégation espagnole, a porté préjudice à son pays.

En conséquence, la délégation espagnole réserve, d'une manière générale, sa position à l'égard du Plan, en ce qui concerne les assignations de fréquence a son pays.

De plus, elle réserve à son gouvernement le droit de prendre les mesures nécessaires pour rétablir les zones de service demandées en vue d'assurer à la population espagnole des conditions de réception satisfaisantes.

Nº 47

Pour la République Arabe d'Egypte:

L'Administration de la République Arabe d'Egypte déclare qu'elle se mettra en rapport avec l'Administration de la France au moment de l'installation de son émetteur sur ondes kilométriques (fréquence: 164 kHz) en vue de réduire autant qu'il est possible les brouillages dans la zone de service de la station française d'Allouis.

Nº 48

Pour le Royaume du Maroc:

La délégation du Royaume du Maroc réserve à son gouvernement le droit de prendre toutes mesures qu'il jugerait necessaires pour proteger ses intérêts si d'autres pays n'observaient pas les dispositions approuvées par la présente Conférence.

D'autre part, la délégation marocaine réserve le droit à son gouvernement de prendre toutes les dispositions qui s'imposent pour amenorer les zones de service de ses émetteurs fonctionnant sur les fréquences suivantes:

594 kHz, 648 kHz, 657 kHz, 702 kHz, 765 kHz, 774 kHz, 918 kHz, 1 017 kHz, 1 080 kHz, 1 116 kHz, 1 188 kHz, 1 206 kHz, 1 233 kHz, 1 377 kHz.

Toutefois, la délégation marocaine n'exclut pas la possibilité de procéder à des négociations directes bilatérales ou multilatérales concernant les fréquences précédentes pour arriver à un résultat satisfaisant.

Nº 49

Pour la République du Kenya:

L'exploitation par l'Egypte de la fréquence 558 kHz est subordonnée à la condition qu'il n'en résultera pas de brouillage nuisible pour le Kenya, pays au nom duquel cette fréquence est inscrite à la fois dans le Plan africain et dans le Fichier de référence

Pour la Malaisie:

La Malaisie a projeté ses besoins en se fondant sur une période beaucoup moins longue que la période de validité du Plan arrêté par la Conférence. De plus, les besoins existants ou prévus de la Malaisie dont il a été tenu compte dans le Plan ne permettent pas, dans bien des cas, d'obtenir la portée de service voulue du fait d'incompatibilité avec les services existants ou prevus d'autres administrations de la Région.

La Malaisie se réserve en conséquence le droit de prendre toute mesure qu'elle jugera nécessaire pour protéger ses services de radiodiffusion, au cas où d'autres pays n'observeraient pas les critères techniques adoptés par la Conférence ou tout accord passé entre la délégation de la Malaisie et celles d'autres pays ayant participé à la deuxième session de la Conférence.

Nº 51

Pour l'Etat d'Israël:

Α

En raison d'un certain nombre de facteurs graves et de conditions particulières, Israël n'a absolument pas pu, jusqu'à present, assurer la couverture satisfaisante de son territoire par ses services de radiodiffusion.

Il est évidemment à prévoir que le Plan va sérieusement contribuer à détériorer, jusqu'à un niveau inacceptable, la couverture d'Israël par ses services de radiodiffusion.

Faute de temps et pour d'autres raisons, il a été impossible de tirer pleinement parti de la procédure de négociation, en vue d'éliminer ou de réduire les incompatibilités, tout au moins les plus graves d'entre elles.

En dépit de la procedure adoptee pour les modifications des demandes présentées, on a pu constater de nouvelles augmentations du niveau de brouillage, même pendant l'étape finale de la Conférence.

Dans de nombreux cas, il n'a pas même été possible de réduire les brouillages provenant de demandes de fréquence et de puissance prévues et ou non enregistrées et causés à des asssignations de fréquence existantes et enregistrées.

L'Administration d'Israël regrette de ne pouvoir accepter les demandes suivantes (identifiées par la fréquence, le symbole du pays et le numéro de la demande étant indiqués entre parenthèses): 576 (BUL-2858, SDN-1645); 657 (ARS-7151, TUR-7231); 711 (EGY-2645, UKR-5842); 738 (OMA-0090, ALG-6887); 846 (IRQ-0547, I-3672, TUR-3075); 882 (YUG-214905, EGY-7509, ARS-4319); 1 026 (IRN-2725); 1 170 (ARS-8754, URS-583403, BLR-583401, UAE-0140); 1 359 (IRQ-0551); 1 368 (IRN-2749). Il s'agit des réserves qu'Israël formule seulement en ce qui concerne les contributions de brouillage les plus graves et les services existants les plus importants.

Il est donc évident que de nouvelles négociations sont indispensables et que des modifications seront nécessaires. Les modifications concernant la liste ci-dessus et les autres demandes d'Israël sont indispensables pour que l'Administration d'Israël puisse accepter le Plan. L'Administration d'Israël se félicite donc de la «recommandation concernant l'amélioration du Plan » (Recommandation N° 1) et se conformera à la procédure préconisée dans ladite Recommandation.

Il convient, en conséquence, de considérer la signature de la délégation d'Israël comme ad referendum, la délégation d'Israël réservant entièrement la position de son Administration quant à l'approbation finale de l'Accord.

En attendant cette approbation, Israël s'efforcera de suivre les principes énoncés dans l'Accord et fera de son mieux pour proteger les droits reconnus des autres administrations intéressées. Toutefois, compte tenu des faits exposés ci-dessus, Israël se réserve le droit de prendre toute mesure qu'il jugera nécessaire pour assurer la couverture satisfaisante de ses services de radiodiffusion.

В

La délégation d'Israël déclare que la signature qu'elle apposera sur l'Accord et l'éventuelle approbation de cet Accord par son Administration ne prendront effet et n'entraîneront pour Israël d'obligation qu'à l'égard des Membres contractants qui appliquent les dispositions de la Convention dans leurs relations avec l'Etat d'Israël.

De plus, la délégation d'Israël déclare officiellement que, conformément à la pratique établie de l'Union, les symboles de pays employés dans le Plan n'ont qu'une portée géographique et que rien dans la présentation des renseignements ou des données figurant dans le Plan ne peut être considéré comme impliquant l'approbation ou l'acceptation par l'Union ou par les Membres contractants d'une disposition quelconque affectant le statut ou les frontières des Etats et des territoires.

Pour la Thailande:

La délégation de la Thaïlande approuve sans réserve le principe selon lequel tous les pays, grands ou petits, ont des droits égaux.

Elle a également conscience du fait que le présent Accord liera les Membres contractants dans leurs relations mutuelles, mais ne liera pas les pays non contractants.

Puisqu'il n'a nullement été garanti que les émetteurs des pays non contractants ou que des stations non identifiées, fonctionnant sans avoir fait l'objet d'une reconnaissance internationale, ne causeront pas de brouillage nuisible aux stations de radiodiffusion exploitées conformément au présent Accord, la délégation de la Thaïlande, en signant les Actes finals de la presente Conférence réserve le droit de son gouvernement de prendre toutes les mesures nécessaires, tout en s'efforçant au maximum d'éviter de causer des brouillages nuisibles aux services de radiodiffusion des autres Membres contractants, pour sauvegarder les intérêts de la Thaïlande et pour faire en sorte que son service de radiodiffusion fonctionne normalement si les emetteurs ou stations susmentionnés causaient des brouillages nuisibles audit service.

La délégation de la Thaïlande réserve également le droit de son gouvernement de prendre toute mesure qu'il jugera necessaire pour proteger les intérêts de la Thaïlande, au cas où un Membre contractant n'observerait pas les dispositions de l'Accord, de ses Annexes et du Protocole final y annexé ou au cas où des réserves exprimées par d'autres pays compromettraient les services de radiodiffusion de la Thaïlande.

Nº 53

Pour la République Populaire de Chine:

- 1. Dans le Plan sont inscrites des assignations de fréquence à des stations de radiodiffusion à ondes hectométriques, situees aux emplacements suivants: Along (94E50, 28N10), Anini (95E52, 28N40), Bomdila (92E30, 27N20), Hapoli (93E40, 27N30), Koloriang (93E27, 27N52), Pasighat (95E20, 28N06), Tawang (91E54, 27N36) et Ziro (93E50, 27N34), qui ont ete presentees par l'Administration indienne des télécommunications. Il s'agit d'emplacements qui ont depuis toujours fait partie du territoire de la Chine. L'établissement, par les autorités indiennes, de stations de radiodiffusion en territoire chinois constitue une violation de la souveraineté de la Chine et il est absolument illégal.
- 2. La République Populaire Démocratique de Corée est le représentant authentique du peuple coréen. Le gouvernement chinois ne reconnaît pas les assignations de fréquence aux stations de radiodiffusion des autorités sud-coréennes, qui sont inscrites dans le Plan.
- 3. Etant donné que le Plan de radiodiffusion du présent Accord, dans sa partie concernant les ondes kilométriques, ne s'applique qu'à la Région I, l'Administration des télécommunications de la République Populaire de Chine réserve sa position au sujet de cette partie du Plan et elle continuera à se réserver le droit d'assigner, en fonction des besoins du service de radiodiffusion de la Chine, des fréquences aux stations chinoises de radiodiffusion à ondes kilométriques. Quant au problème des brouillages nuisibles que le service chinois de radiodiffusion à ondes kilométriques est susceptible de causer aux autres services de radiocommunications l'Administration des télécommunications de la République Populaire de Chine est disposée à le régler dans la mesure du possible, en prenant les mesures techniques nécessaires, par voie de négociations amicales, en partant du principe de l'égalité et des avantages réciproques.
- 4. Si, dans la mise en œuvre du Plan d'assignations de fréquence, toute infraction à l'Accord cause des brouillages aux stations chinoises de radiodiffusion, la Chine se réservera le droit de prendre les mesures nécessaires.

Nº 54

Pour l'Algérie (République Algérienne Démocratique et Populaire), le Royaume de l'Arabie Saoudite, la République Arabe d'Egypte, les Emirats Arabes Unis, le Royaume Hachémite de Jordanie, l'Etat de Koweit, le Liban, la République Arabe Libyenne, le Royaume du Maroc, la République Islamique de Mauritanie, l'Etat du Qatar, la République Démocratique du Soudan, la Tunisie, la République Arabe du Yémen et la République Démocratique Populaire du Yémen:

Les délégations des pays ci-dessus mentionnés déclarent que la signature et l'éventuelle ratification, par leurs gouvernements respectifs, de l'Accord régional relatif à l'utilisation par le service de radiodiffusion de fréquences dans les bandes des ondes hectométriques dans les Régions 1 et 3 et dans les bandes des ondes kilométriques dans la Région 1 (Genève. 1975), ne sont pas valables en ce qui concerne le Membre apparaissant dans l'Accord, ses Annexes et le Protocole final sous le nom d'Israël et n'impliquent d'aucune façon sa reconnaissance.

Pour le Royaume de l'Arabie Saoudite, la République Arabe d'Egypte, le Royaume Hachémite de Jordanie, l'Etat de Koweit, le Royaume du Maroc et la Tunisie:

Les délégations des pays susmentionnés déclarent que leurs Administrations se réservent le droit de prendre toute mesure necessaire pour protéger leurs intérêts au cas où un pays n'observerait par l'Accord adopté par la Conférence administrative régionale de radiodiffusion à ondes kilométriques et hectométriques (Régions 1 et 3), Genève, 1975, ses Annexes et les Protocoles y annexés, ou au cas où les réserves formulées par d'autres délégations au nom de leurs administrations porteraient prejudice au bon fonctionnement du service de radiodiffusion des pays signataires de la présente réserve.

Nº 56

Pour la République Arabe d'Egypte:

En signant le présent Accord, la délégation de la République Arabe d'Egypte déclare que rien, dans l'Accord régional relatif à l'utilisation par le service de radiodiffusion de fréquences dans les bandes des ondes hectométriques dans les Régions 1 et 3 et dans les bandes des ondes kilométriques dans la Région I (Genève, 1975), dans les Annexes audit Accord, ou par suite de leur mise en œuvre, ne peut d'auçune manière porter atteinte à la souveraineté et à l'intégrité territoriale de la République Arabe d'Egypte.

Nº 57

Pour le Royaume de l'Arabie Saoudite:

La délégation du Royaume de l'Arabie Saoudite déclare que l'Administration du Royaume de l'Arabie Saoudite ne reconnaît pas aux assignations de fréquence dans les bandes des ondes kilométriques, figurant actuellement dans le Plan, une quelconque priorité sur les demandes de fréquences que pourraient présenter d'autres pays lors de la révision dudit Plan par une future conférence, en ce qui concerne la bande des ondes kilométriques.

Nº 58

Pour la République de l'Inde:

- 1. En signant l'Accord régional relatif à l'utilisation par le service de radiodiffusion de fréquences dans les bandes des ondes hectométriques dans les Régions 1 et 3 et dans les bandes des ondes kilométriques dans la Région 1 (Genève, 1975), la délégation de la République de l'Inde réserve le droit de son gouvernement de prendre, au besoin, les mesures appropriées pour assurer la bonne application de l'Accord et du Plan y annexé, au cas où un pays quelconque formulerait des réserves à l'égard des dispositions de l'Accord et du Plan y annexé ou n'accepterait pas ces dispositions.
- 2. La République de l'Inde fera tout son possible pour contribuer au succès du Plan. Elle espère sincèrement que les autres Membres de l'Union appartenant aux Régions I et 3 en feront de même.
- 3. Le Plan contient des assignations de fréquence au Pakistan pour les stations de Mirpur, Muzaffarabad, Gilgit et Skardu, situées dans l'Etat de Jammu et du Cachemire qui fait partie intégrante de l'Inde. La République de l'Inde ne reconnaît ni ces assignations de fréquence au Pakistan, ni l'exploitation de ces stations par l'Administration du Pakistan. C'est pour éviter d'accroître la charge de travail de la Conférence que la délégation de l'Inde n'a pas demandé que la question soit étudiée en séance; la délégation de l'Inde estime en effet que le problème dû à l'occupation d'une partie de l'Etat de Jammu et de Cachemire par le Pakistan peut être plus aisément résolu lors d'une autre réunion, par des moyens pacifiques et des négociations bilatérales, tels que l'envisage l'Accord de Simla.
- 4. Le Plan relatif à la bande des ondes kilométriques comporte un certain nombre d'assignations de fréquence, qui ne sont pas encore en exploitation mais qui pourraient causer des brouillages nuisibles à d'autres services de radiocommunication de l'Inde, en particulier aux services mobiles maritime et aéronautique. C'est là un fait qui compromet la sécurité de la vie humaine en mer et dans les airs. C'est pourquoi l'Inde réserve le droit de son gouvernement de ne pas accepter une assignation qui risquerait de causer des brouillages nuisibles à d'autres services de radiocommunication de l'Inde.

5. Les assignations des fréquences 675 kHz, 684 kHz, 738 kHz, 972 kHz et 1 125 kHz au Sri Lanka (correspondant respectivement aux numéros 6930, 6931, 6936, 6950 et 6956 de l'I.F.R.B.) causeront des brouillages nuisibles aux assignations actuelles de l'Inde dans ces canaux. Ces brouillages ne pourront être éliminés par des négociations mutuelles. La délégation de l'Inde réserve en conséquence le droit de son gouvernement de ne pas accepter dans le Plan les assignations susmentionnees.

Nº 59

Pour le Danemark:

La délégation du Danemark ne peut accepter le brouillage dû à la station de Dresde, en République Démocratique Allemande, exploitée sur la fréquence 1 431 kHz avec une puissance de 150 kW.

Etant donné les résultats de la Conférence, il est nécessaire d'améliorer au maximum les conditions d'utilisation de ladite fréquence. L'Administration du Danemark est disposée à accepter la station de Dresde si l'Administration de la République Démocratique Allemande s'engage à réduire de 10 dB la puissance rayonnée par cette station dans la direction du Danemark.

Nº 60

Pour l'Italie:

La délégation de l'Italie constate que:

- a) la première session de la Conférence régionale de radiodiffusion n'a pas établi de normes techniques précises et univoques. Cela a conduit à la présentation d'un nombre très élevé de demandes d'assignation, une partie desquelles a été inscrite dans les canaux que l'Italie utilise en conformité avec la Convention et le Plan de Copenhague, 1948;
- b) la deuxième session de ladite Conférence n'a pas appliqué des principes techniques de planification pour l'adoption desquels la délégation italienne a fait tous les efforts possibles en présentant aussi de nombreux documents;
- c) la structure de la deuxième session de ladite Conférence a permis seulement de faire une coordination limitée et insatisfaisante des demandes d'assignation.

Il résulte de ces faits une sensible réduction des zones de service des émetteurs italiens, pour la protection desquelles l'Italie devra prendre toutes mesures qui pourraient s'avérer nécessaires.

En particulier l'Italie coordonnera:

avec le Royaume de l'Arabie Saoudite: l'utilisation des fréquences 657 kHz et 900 kHz (correspondantes aux fréquences 656 kHz et 899 kHz assignées à l'Italie par le Plan de Copenhague). L'Italie et l'Arabie Saoudite se sont engagees a poursuivre les négociations après la Conférence afin d'aboutir à une solution satisfaisante pour les deux pays.

En particulier, en ce qui concerne la fréquence de 900 kHz, assignée en exclusivité à l'Italie par le Plan de Copenhague au sein de la Zone européenne de radiodiffusion, ces négociations devront tenir compte de ce qui suit, en accord avec le paragraphe 9.2.1 du Rapport de la première session de la Conférence:

- 1) le service actuel de l'émetteur de Milano, assuré par onde ionosphérique sur le territoire italien, ne devra subir aucune réduction;
- 2) dans les limites de la compatibilité visée au paragraphe 1) ci-dessus, la demande de l'Arabie Saoudite pour cette même fréquence sera satisfaite de façon à assurer dans sa zone de service un rapport signal/brouillage satisfaisant;
- avec la Grèce, l'utilisation de la fréquence 1 116 kHz (correspondant à la fréquence 1 115 kHz assignée à l'Italie par le Plan de Copenhague) et des fréquences 999 kHz et 1 008 kHz;
- avec la République de Malte l'utilisation des fréquences 756 kHz (Capo Vaticano) et 999 kHz.

L'Italie utilisera en outre une largeur de bande nécessaire supérieure à 9 kHz dans les cas où les émetteurs italiens seraient brouillés par des émissions dans les canaux adjacents ayant une largeur de bande nécessaire supérieure à 9 kHz.

Pour le Malawi:

La délégation du Malawi déclare que son Administration se réserve le droit de prendre les mesures qu'elle jugera necessaires pour sauvegarder ses intérêts, au cas où un Membre ne respecterait pas les dispositions de l'Accord, de ses Annexes et des Protocoles y annexés, ou au cas où les réserves formulées par d'autres délégations au nom de leurs administrations se révéleraient préjudiciables au service de radiodiffusion exploité par le Malawi dans la bande des ondes hectométriques.

Nº 62

Pour le Népal:

Etant donné le caractère montagneux de son territoire et les difficultés rencontrées pour développer le service de radiodiffusion à ondes hectométriques, le Népal a également soumis à la présente Conférence une demande dans la bande des ondes kilométriques, en indiquant les caractéristiques suivantes: 191 kHz et 100 kW.

Le Plan de radiodiffusion actuel ne s'appliquant, pour les ondes kilométriques, qu'à la Région 1, l'Administration du Népal se réserve le droit d'utiliser la fréquence 191 kHz pour le service de radiodiffusion népalais, si la prochaine Conférence administrative mondiale des radiocommunications décide d'attribuer des fréquences au service de radiodiffusion à ondes kilométriques dans la Région 3.

Nº 63

Pour la République Populaire du Bangladesh:

- 1. La délégation du Bangladesh réserve le droit de son gouvernement de prendre les mesures qu'il jugera appropriées pour proteger ses intérêts contre tout droit de priorité que pourrait souhaiter une administration quelconque exploitant actuellement un service de radiodiffusion sur ondes kilométriques, si la Conférence administrative mondiale des radiocommunications de 1979 autorisait à l'avenir l'utilisation de la bande des ondes kilométriques par le service de radiodiffusion dans la Région 3.
- 2. La délégation du Bangladesh réserve, de plus, le droit de son gouvernement de prendre toutes les mesures qu'il jugera appropriées pour sauvegarder la couverture de son service national de radiodiffusion au cas où d'autres administrations ne respecteraient pas les dispositions de caractère technique et les coordinations adoptées par la Conférence.

Nº 64

Pour la République du Burundi:

La République du Burundi se réserve le droit de prendre toutes mesures qu'elle jugerait nécessaires pour protéger ses intérêts si un autre pays Membre ne respectait pas les dispositions de l'Accord régional relatif à l'utilisation par le service de radiodiffusion de fréquences dans les bandes des ondes hectométriques dans les Régions 1 et 3, ou ne respectait pas les dispositions des Annexes ou des Protocoles joints à cet Accord, ou si les réserves faites par d'autres pays portaient préjudice aux services de radiodiffusion de la République du Burundi.

Nº 65

Pour le Ghana:

La délégation du Ghana réserve le droit de son gouvernement de prendre toutes les mesures qu'il jugera appropriées en vue de sauvegarder la couverture nationale de ses services de radiodiffusion, dans le cas où d'autres pays ne respecteraient pas les dispositions de caractère technique adoptées par la Conférence afin de réduire les brouillages nuisibles au minimum.

Pour le Rovaume de l'Arabie Saoudite:

Les Administrations de l'Italie et de l'Arabie Saoudite poursuivront leurs négociations après la Conférence afin de trouver une solution, satisfaisant les deux Administrations, au sujet de l'utilisation de la fréquence 900 kHz qui a été allotie en exclusivité à l'Italie dans le cadre du Plan de Copenhague relatif à la Zone européenne de radiodiffusion. Ces négociations tiendront compte de ce qui suit, conformément au paragraphe 9.2.1 du Rapport de la première session de la Conférence:

- a) le service existant, par onde ionosphérique, sur le territoire italien, tel qu'il est actuellement assuré par l'émetteur de Milan, ne doit pas subir de dégradation;
- b) dans la mesure où cela sera compatible avec le point a) ci-dessus, les demandes présentées par l'Arabie Saoudite sur la fréquence susmentionnée seront satisfaites de manière à assurer des rapports signal/bruit satisfaisants dans la zone de service de ce pays.

Nº 67

Pour la République Togolaise:

La délégation de la République Togolaise déclare que son Administration se réserve le droit de prendre toutes mesures utiles pour la sauvegarde de ses intérêts si les réserves émises par d'autres délégations au nom de leurs administrations ou le non respect de l'Accord et de ses Annexes ainsi que des Protocoles y attachés tendaient à compromettre la bonne marche de son service de radiodiffusion.

Nº 68

Pour l'Autriche:

- 1. L'Autriche est venue participer à la présente Conférence dans la ferme intention de contribuer dans la mesure du possible à l'amélioration de la situation existant dans la bande des ondes hectométriques au 1er mai 1975. C'est dans un esprit de coopération mutuelle et en se fondant sur de sains principes techniques que la délégation de l'Autriche a adressé une lettre aux Présidents des Groupes de planification compétents et au Groupe de liaison pour la Zone européenne de radiodiffusion, lettre dont les points essentiels étaient les suivants:
- «Les demandes de l'Autriche ont été établies en tenant compte de la situation existant en Europe et les puissances des emetteurs les plus puissants ont été ajustées en fonction des valeurs à prévoir pour le champ utilisable. Afin de contribuer à l'amélioration de la situation générale, ce qui sera possible dans le cas de l'Autriche à condition que le champ utilisable ne dépasse pas:

83 dBµ sur 585 kHz

78 dBµ sur 1 026 kHz

78 dBµ sur 1 476 kHz,

la délégation de l'Autriche propose de réduire la puissance totale des canaux de la manière suivante (sans tenir compte des emetteurs à faible puissance) pendant les heures de nuit:

| Fréquence (kHz) | Puissance totale des canaux d'après les demandes (kW) | Réduction pendant les heures de nuit (kW) | |
|--------------------|---|---|--|
| 585 | 1 430 | 730 | |
| 630 | 160 | 90 | |
| 729 | 20 | 0 | |
| 774 | 130 | 60 | |
| 891 | 210 | 60 | |
| 1 026 | 710 | 460 | |

«Il est entendu que les réductions de demandes proposées sont soumises à l'obligation de respecter les valeurs indiquées pour le champ utilisable. Si cette condition n'était pas remplie, l'Administration de l'Autriche se verrait contrainte de maintenir ses demandes initiales.»

Pour les fréquences 1 026 kHz et 1 476 kHz, la coordination a pu être menée à bien avec les autres délégations; dans certains cas elle sera poursuivie après la Conférence. En conséquence, des réductions de puissance pour les émetteurs de l'Autriche sur les fréquences 630 kHz, 774 kHz, 891 kHz et 1 026 kHz ont pu être portées dans le Plan et la fréquence 729 kHz ne sera plus utilisée par l'Autriche. Malheureusement, il n'a pas été possible de parvenir à la coordination de la fréquence 585 kHz.

2. La fréquence 585 kHz (antérieurement 584 kHz), allotie en exclusivité à l'Autriche par la Convention de Copenhague (1948), est exploitée par l'Autriche depuis 1950. Par la suite, la station espagnole de Madrid a fonctionné dans le même canal, réduisant ainsi de beaucoup la zone de service de l'Autriche. Enfin, parmi les demandes présentées par la Tunisie à la presente Conférence, figure la station de Gafsa, avec une puissance de 350 kW. Les brouillages subis par la principale station autrichienne, Vienne, qui fait partie d'un réseau synchronisé de quatre stations, vont beaucoup augmenter en raison des emissions de la station tunisienne qui deviendra la principale source de brouillage.

Au cours des négociations longues et compliquées entamées en vue d'atténuer les brouillages en réduisant les puissances des stations en cause, la délégation autrichienne a présenté plusieurs propositions qui ont abouti à une solution technique provisoire; celle-ci n'a pu toutefois être confirmée à titre définitif. Pendant la dernière phase de ces négociations, la délégation de l'Autriche a proposé officiellement de ramener la puissance à 200 kW pour l'Espagne, à 100 kW pour la Tunisie et a 430 kW au total pour l'Autriche (allant ainsi beaucoup plus loin que l'offre officielle formulée dans la lettre). De plus, l'Autriche a proposé que des négociations aient lieu entre les trois administrations intéressées pendant le premier semestre de 1976 afin d'améliorer la situation, en tenant pleinement compte des demandes de la Tunisie, de la situation particulière de l'Espagne et de la protection maximale à accorder également aux services existants. Un accord aurait dû être annoncé dans une déclaration commune des trois administrations.

Malheureusement, aucune suite positive n'a été donnée à la proposition intégrale. La Tunisie a finalement décidé de prendre des mesures unilatérales.

- 3. Ainsi, la délégation de l'Autriche est dans l'obligation de faire la réserve suivante:
- «L'Autriche se réserve le droit, en ce qui concerne l'exploitation, avant l'entrée en vigueur de l'Accord, de la station de Gafsa, avec une puissance supérieure à 100 kW et/ou de la station de Madrid avec une puissance supérieure à 200 kW, sur la fréquence 585 kHz, de prendre toutes les mesures nécessaires afin de maintenir la zone de service de l'Autriche telle qu'elle était au 1er mai 1975.
- «De plus, l'Autriche se réserve le droit, à la date de l'entrée en vigueur de l'Accord, d'exploiter sur la fréquence porteuse 585 kHz, un réseau synchronisé ayant une puissance totale de 1 430 kW, afin de protéger ses stations contre l'augmentation des brouillages dans ce canal, à moins que les négociations entre les Administrations de l'Espagne, de la Tunisie et de l'Autriche, conformément à la proposition de la délégation autrichienne, ne permettent de parvenir à un accord sur des reductions raisonnables de puissance.»

Nº 69

Pour la République Populaire de Bulgarie:

La délégation de la République Populaire de Bulgarie déclare ne pouvoir accepter le haut niveau de brouillage entraîné par les stations de grande puissance des pays suivants:

République fédérale d'Allemagne

Israël

Chypre

Libye

Syrie

France

- sur les fréquences 576 et 594 kHz,

sur les fréquence 576 kHz,

sur les fréquences 963 et 981 kHz,

sur les fréquences 828 et 1 125 kHz,

sur les fréquences 828 et 1 125 kHz,

sur les fréquences 747 et 828 kHz,

sur la fréquence 864 kHz.

L'Administration de la République Populaire de Bulgarie demande aux pays précités de prendre les mesures necessaires a la réduction des brouillages nuisibles. Considérant les difficultés que causeraient ces brouillages au service de radiodiffusion bulgare, l'Administration de la République Populaire de Bulgarie se réserve le droit de prendre toutes les mesures necessaires pour garantir le fonctionnement normal de ses émetteurs qui utilisent les fréquences en question.

Pour la République Socialiste Soviétique de Biélorussie, la République Populaire de Bulgarie, la République Populaire Hongroise, la République Populaire de Mongolie, la République Populaire de Pologne, la République Démocratique Allemande, la République Socialiste Soviétique d'Ukraine, la République Socialiste Tchécoslovaque et l'Union des Républiques Socialistes Soviétiques:

En signant l'Accord et le Plan, les délégations des pays ci-dessus mentionnés réservent à leurs gouvernements le droit de prendre toutes les mesures d'ordre technique nécessaires pour faire en sorte que leurs services de radiodiffusion puissent continuer a fonctionner normalement au cas où les services de radiodiffusion d'autres pays ne respecteraient pas les conditions d'utilisation des fréquences stipulées dans l'Accôrd et dans le Plan.

Nº 71

Pour la République de Nauru:

La République de Nauru se réserve le droit de prendre les mesures qu'elle pourra juger nécessaires pour sauvegarder ses intérêts, au cas où un Membre ne respecterait pas les dispositions de l'Accord régional relatif à l'utilisation par le service de radiodiffusion de fréquences dans les bandes des ondes hectométriques dans les Régions 1 et 3, les dispositions des Annexes à cet Accord ou les Protocoles y annexés, ou au cas où les réserves formulées par d'autres pays seraient préjudiciables aux services de radiodiffusion de Nauru.

Nº 72

Pour la République fédérale d'Allemagne:

La délégation de la République fédérale d'Allemagne, prenant note de la déclaration N° 44 soumise par la République Populaire de Pologne concernant la station de Holzkirchen qui bénéficie d'une assignation sur la fréquence 720 kHz, déclare ce qui suit: comme le nouveau Plan de fréquences ne prévoit aucune assignation pour la Pologne sur les mêmes canaux ou sur des canaux adjacents, la station en question ne saurait causer des brouillages à des stations fonctionnant en Pologne. La reserve est donc considérée comme non fondée.

Nº 73

Pour les Emirats Arabes Unis:

La délégation des Emirats Arabes Unis note que la Grèce a formulé une réserve (N° 30) au sujet de l'utilisation de la fréquence 729 kHz par les Emirats Arabes Unis, se réservant le droit d'augmenter la puissance de l'émetteur d'Athènes. La délégation des E.A.U. déclare qu'elle a fait de son mieux pour qu'une solution acceptable soit dégagée, notamment en faisant savoir qu'elle était prête à examiner le remplacement de cette fréquence — qui est effectivement en service — par une autre fréquence appropriée, s'il pouvait s'en trouver une qui n'occasionne pas de brouillages mutuels avec une autre administration. Il n'a malheureusement pas été possible de dégager une telle solution, en raison du fort encombrement de la bande.

D'ailleurs, comme l'émetteur d'Athènes cause, de son côté, un brouillage nuisible dans la zone desservie par l'émetteur des E.A.U., la délégation des Etats Arabes Unis réserve le droit de son gouvernement — pour le cas où de nouvelles negociations avec l'Administration de la Grèce n'aboutiraient pas à un accord mutuel de réduction des brouillages et si l'Administration de la Grèce prenaît des mesures entraînant une augmentation du brouillage causé au service de radiodiffusion des E.A.U. sur 729 kHz — de prendre toute mesure qu'il estimera nécessaire pour protéger la couverture nationale de son service de radiodiffusion, notamment en augmentant la puissance de son émetteur.

Nº 74

Pour le Royaume de Lesotho:

Concernant la réserve N° 28 formulée par la République de l'Ouganda la délégation du Royaume de Lesotho fait remarquer que la fréquence de 639 kHz a été assignée à son administration par la Conférence administrative régionale de radiodiffusion à ondes hectométriques et kilométriques (Régions 1 et 3), Genève, 1975. Cette fréquence a aussi été assignée a l'Ouganda et également au Royaume-Uni pour un émetteur fonctionnant à Chypre.

Au cas où des brouillages nuisibles seraient causés à des stations du Lesotho, du fait d'une augmentation de puissance ou d'une modification apportée au Plan par l'une de ces Administrations ou par toute autre administration, le Royaume de Lesotho se réserve le droit de prendre toutes mesures qu'il pourra juger nécessaires pour protéger ses intérêts en matière de radiodiffusion.

Nº 75

Pour la République de l'Inde:

La délégation de la République de l'Inde tient à exprimer son étonnement devant la déclaration N° 53 (paragraphe 1) faite par la délégation de la République Populaire de Chine au sujet des assignations de fréquence inscrites dans le Plan au nom de l'Inde et pour les stations suivantes: Along, Anini, Bondila, Hapoli, Koloriang, Pasig Hat, Tawang et Ziro. Ces stations se trouvent dans des localités qui ont toujours fait et font toujours partie du territoire indien, sur lequel la République de l'Inde a le droit d'installer des stations de radiodiffusion. Plusieurs desdites stations fonctionnent déjà dans certaines des localités précédemment indiquées. L'Inde s'élève contre une ingérence inadmissible dans ses affaires intérieures, visant a mettre en question l'intégrité du territoire de l'Inde et les droits de souveraineté de ce pays sur ledit territoire.

Nº 76

Pour l'Islande:

Sè référant à la déclaration N° 12 faite par la délégation de la France au sujet de la fréquence 182 kHz assignée en particulier à la station française de Sarrelouis et à la station d'Oranienburg, située en République Démocratique Allemande, et a la proposition de rechercher, en dehors de la Conférence, une solution à l'incompatibilité de ces deux stations, la délégation de l'Islande se réserve le droit, au nom de son Administration, de prendre toute mesure qu'elle jugera nécessaire pour proteger ses intérêts, compte tenu des termes de l'accord qui sera éventuellement conclu entre l'Administration de la République Démocratique Allemande.

Nº 77

Pour la France:

Ayant pris connaissance de la déclaration N° 48 de la délégation du Royaume du Maroc relative notamment aux fréquences 1 206 kHz et 1 377 kHz, la délégation française fait toute réserve quant aux mesures que pourrait être amenée à prendre son Administration si les zones de service de ses émetteurs de Bordeaux et de Lille devaient être réduites à la suite de décisions unilatérales du Royaume du Maroc.

Nº 78

Pour la France:

Ayant pris connaissance de la déclaration N° 69 de la République Populaire de Bulgarie relative à plusieurs fréquences, dont celle de la station de PARIS sur 864 kHz, la délégation française observe que la station bulgare inscrite au présent Plan apporte la contribution la plus importante au brouillage de la station de Paris, à laquelle avait été assignée en exclusivité par le Plan de Copenhague la fréquence de 863 kHz.

En conséquence, la délégation française réserve pour son Administration le droit de prendre toutes mesures propres à remedier aux conséquences d'éventuelles décisions unilatérales de la République Populaire de Bulgarie.

Nº 79

Pour le Japon:

La délégation du Japon déclare que son Administration ne peut accepter la réserve N° 53 (paragraphe 3) formulée par l'Administration de la République Populaire de Chine au sujet du service de radiodiffusion à ondes kilométriques.

Aux termes de l'Article 5 du Règlement des radiocommunications, la bande des ondes kilométriques n'est pas attribuée au service de radiodiffusion dans la Région 3. De plus, l'exploitation de stations de radiodiffusion dans la Région 3 provoque un brouillage nuisible pour les stations d'autres services de radiocommunication de la Région 3, en particulier pour les stations des radiophares aéronautiques, alors que ce brouillage peut être assez intense pour compromettre la sécurité de la vie humaine.

En conséquence, la délégation du Japon déclare que son Administration se réserve le droit de prendre toutes les mesures necessaires a la sauvegarde de ses intérêts, auxquels pourraient porter préjudice les réserves faites par la délégation de la République Populaire de Chine au sujet du service de radiodiffusion à ondes kilométriques.

Nº 80

Pour le Pakistan:

Dans son Protocole final N° 58 (paragraphe 3) la délégation de la République de l'Inde a jugé bon de faire une déclaration surprenante qui est non seulement sans rapport avec la réalité mais qui crée en outre le fâcheux précédent d'un Etat tentant d'utiliser une Conférence de caractère purement technique à des fins de propagande politique.

La délégation du Pakistan tient à rétablir les faits concernant le statut de l'Etat de Jammu et Cachemire, tel qu'il a été reconnu par les Nations Unies. L'Etat de Jammu et Cachemire est un territoire en litige, dont le statut permanent doit encore être décidé par le peuple de cet Etat, conformément aux résolutions pertinentes adoptées par les Nations Unies. Toutes les décisions relatives aux stations de radiodiffusion se trouvant sur le territoire de l'Etat de Jammu et Cachemire, y compris la partie qui se trouve actuellement occupée par l'Inde, sont conformes au statut provisoire de cet Etat, tel qu'il a été reconnu dans les résolutions des Nations Unies. Les stations du Plan qui se trouvent dans la zone de l'Etat de Jammu et Cachemire sous occupation indienne ne sont pas reconnues par le Pakistan comme étant situées en territoire indien.

En faisant cette mise au point, la délégation du Pakistan ne peut qu'exprimer ses regrets de constater que la délégation indienne s'efforce d'utiliser la présente Conférence à des sins de propagande politique.

Nº 81

Pour la République Socialiste Fédérative de Yougoslavie:

Se référant à la déclaration N° 51, la délégation yougoslave ne peut pas accepter le brouillage de l'émetteur d'Israël Bet Hilel sur la fréquence 882 kHz, qui réduit la zone de service de la station yougoslave Titograd, que la Yougoslavie utilise en conformité avec le Plan de Copenhague.

L'Administration yougoslave invite l'Administration d'Israël à éliminer ce brouillage. Dans le cas contraire elle se reserve le droit de prendre toutes les mesures nécessaires pour éliminer ce brouillage et pour améliorer la situation existante.

Nº 82

Pour la République Socialiste Soviétique de Biélorussie:

La délégation de la République Socialiste Soviétique de Biélorussie s'élève vivement contre l'intention exprimée par la Belgique (déclaration N° 24) d'utiliser la fréquence 281 kHz qui est assignée à une station de radiodiffusion de Biélorussie.

La question de l'utilisation de cette fréquence par la Belgique n'a pas été discutée lors de la Conférence.

Nº 83

Pour l'Iran:

La délégation de l'Iran se réfère à la déclaration N° 51 d'Israël et déclare ne pouvoir accepter l'assignation de la fréquence 1 026 kHz à Israël, cette assignation causant pour l'Iran un niveau de brouillage de 92 dB. Le brouillage dont Israël a fait état en ce qui concerne la fréquence 1 368 kHz est en fait inexistant et résulte d'une indication erronée qui a été corrigee.

Pour la Tunisie:

Dans sa déclaration N° 24, l'Administration de la Belgique fait part de son intention d'utiliser la fréquence 281 kHz, allouée à la Tunisie dans le Plan en partage avec d'autres pays.

L'Administration tunisienne, conformément à la déclaration N° 55, tient à affirmer:

- a) qu'elle considère l'utilisation de cette fréquence par la Belgique ou d'autres pays comme une violation de
- b) qu'elle prendra, sí, en dépit de la présente déclaration, cette violation se produit, les mesures nécessaires pour sauvegarder ses intérêts.

Nº 85

Pour la République de Chypre:

Notant que certaines réserves ont été formulées au sujet des stations de Chypre, l'Administration de Chypre tient à déclarer qu'elle s'est conformée en général aux principes énoncés dans le Rapport de la première session de la Conférence et en particulier au principe de l'égalité des droits.

Compte tenu de ce qui précède, l'Administration de Chypre se réserve le droit de prendre toutes les mesures necessaires pour proteger ses interêts touchant ses services de radiodiffusion.

Toutefois, l'Administration de Chypre, se référant à la déclaration N° 39 (paragraphe 3), poursuivra les pourparlers avec l'Administration de Tunisie afin d'étudier la possibilité d'une réduction mutuelle du niveau de brouillage sur la fréquence 903 kHz, cela dans l'esprit d'amitié et de coopération qui caractérise les relations entre les deux pays.

Nº 86

Pour la République Socialiste de Roumanie:

En se référant à la déclaration N° 38, la délégation de la République Socialiste de Roumanie tient à déclarer qu'elle ne peut prendre en considération l'objection de la Turquie, compte tenu du fait que l'assignation en cause n'a pas été coordonnée en temps opportun avec l'Administration roumaine et du fait que la station roumaine fonctionne conformément aux dispositions du Règlement des radiocommunications.

Nº 87

Pour la République de Corée:

La délégation de la République de Corée déclare que la réserve N° 53 (paragraphe 2) formulée par la délégation de la République Populaire de Chine concernant la validité de la représentation de la délégation de la Corée est dénuée de fondement et de valeur juridique; la réserve porte atteinte au droit souverain de la République de Corée d'exploiter et de réglementer ses services de télécommunication.

En outre, la délégation de la République de Corée déclare qu'elle ne reconnaît pas les fréquences assignées dans le Plan à la République Populaire de Chine qui compromettent ou compromettent à l'avenir le fonctionnement normal des services de radiodiffusion de la République de Corée.

Nº 88

Pour la République fédérale d'Allemagne:

La délégation de la République fédérale d'Allemagne, prenant note de la déclaration N° 69 de la délégation de la République Populaire de Bulgarie relative aux stations auxquelles sont assignées les fréquences 576 et 594 kHz, tient à faire la déclaration ci-après:

En ce qui concerne les fréquences en question, la République fédérale d'Allemagne assure une protection de 4 dB sur 576 kHz et de 15 dB sur 594 kHz (Frankfurt). La puissance de la station de Hoher Meissner émettant également sur 594 kHz n'a subi aucune modification depuis de nombreuses années et aucune augmentation de puissance n'a été demandée a la présente Conférence.

La réserve formulée par la Bulgarie est en conséquence jugée sans fondement.

Nº 89

Pour la République de Sri Lanka (Ceylan):

Se référant à la déclaration N° 58 (paragraphe 5) présentée par l'Inde, la délégation de Sri Lanka désire relever ce qui suit:

- a) la délégation cinghalaise réserve le droit de son gouvernement d'agir de la même façon en ce qui concerne des brouillages similaires au détriment des assignations de fréquence existantes au Sri Lanka;
- b) il a été décidé récemment à la présente Conférence que les négociations devraient, le cas échéant, se poursuivre apres la Conférence en vue de parvenir à résoudre les problèmes.

Nº 90

Pour la Turquie:

La délégation de la Turquie réserve le droit de son gouvernement de prendre toutes les mesures qu'il jugerait nécessaires pour proteger ses interêts au cas où les réserves faites par les délégations des autres pays aux noms de leurs administrations porteraient prejudice au bon fonctionnement des services de la radiodiffusion de la Turquie.

Nº 91

Pour l'Etat d'Israël:

Les déclarations N° 54 faites par les délégations des pays suivants: l'Algérie (République Algérienne Démocratique et Populaire), le Royaume de l'Arabie Saoudite, la République Arabe d'Egypte, les Emirats Arabes Unis, le Royaume Hachémite de Jordanie, l'Etat de Koweït, le Liban, la République Arabe Libyenne, le Royaume du Maroc, la République Islamique de Mauritanie, l'Etat du Qatar, la République Démocratique du Soudan, la Tunisie, la République Arabe du Yémen et la République Démocratique Populaire du Yémen, étant en contradiction flagrante avec les principes et les objectifs de la Convention, et partant, dépourvues de toute valeur juridique, la délégation d'Israël tient a déclarer au nom du gouvernement d'Israël qu'elle rejette catégoriquement ces déclarations et qu'elle entend agir en considérant que lesdites déclarations sont dénuées de toute valeur quant aux droits et obligations de tout Membre contractant.

En tout étant de cause, Israël fera valoir ses droits pour protéger ses intérêts au cas où les Administrations de l'Algérie (République Algérienne Démocratique et Populaire), du Royaume de l'Arabie Saoudite, de la République Arabe d'Egypte, des Emirats Arabes Unis, du Royaume Hachémite de Jordanie, de l'Etat de Koweït, du Liban, de la République Arabe Libyenne, du Royaume du Maroc, de la République Islamique de Mauritanie, de l'Etat du Qatar, de la République Démocratique du Soudan, de la Tunisie, de la République Arabe du Yémen et de la République Démocratique Populaire du Yémen violeraient d'une manière quelconque l'une des dispositions de l'Accord ou des Annexes et Protocoles y annexès.

Nº 92

Pour l'Etat d'Israël:

Se référant à la déclaration N° 69 de la République Populaire de Bulgarie relative à l'assignation de la fréquence 576 kHz (actuellement 575 kHz) à Israël, la délégation de l'Etat d'Israël fait la déclaration ci-après:

Une station très puissante, et non inscrite, de la République Populaire de Bulgarie, a été récemment mise en service, en contravention aux dispositions du Règlement des radiocommunications; cette station cause des brouillages nuisibles à l'une des principales stations d'Israël, exploitée depuis de nombreuses années.

Un échange de correspondance a eu lieu à ce sujet et l'Administration d'Israël a demandé l'aide de l'I.F.R.B. afin d'éliminer le brouillage.

Les pourparlers échangés avec la délégation de la Bulgarie au cours de la Conférence n'ont malheureusement pas permis de résoudre le problème. En conséquence, l'Administration d'Israël demande à l'Administration de Bulgarie de prendre les mesures nécessaires pour éliminer le brouillage en question.

En l'absence d'une solution appropriée, l'Administration d'Israël se réserve le droit d'augmenter la puissance de sa station à laquelle est assignée la fréquence 576 kHz, de manière à assurer une couverture satisfaisante.

Nº 93

Pour la République du Mali:

La délégation de la République du Mali, ayant pris connaissance des nombreuses réserves présentées par certaines délégations au nom de leurs administrations ou gouvernements, s'inquiète beaucoup quant à l'application correcte des dispositions adoptées par la présente Conférence.

En effet, il apparaît que certaines de ces réserves renferment implicitement l'intention de se dérober aux obligations imposees par la Conférence.

Par conséquent, la délégation de la République du Mali réserve à son Administration le droit de prendre toutes mesures utiles aux fins de sauvegarder ses intérêts, au cas où la non-observation, par une administration, des dispositions adoptées par la Conférence compromettrait la bonne marche de son service de radiodiffusion.

Nº 94

Pour la France:

La délégation de la France, après consultation avec les gouvernement du Royaume-Uni et des Etats-Unis d'Amérique, prenant note de la déclaration N° 19 de l'U.R.S.S., déclare que rien, dans les travaux ou les Actes finals de cette Conférence de radiodiffusion, n'est incompatible avec aucune disposition de l'Accord Quadripartite du 3 septembre 1971.

Cette déclaration s'applique aussi aux déclarations des Etats qui ne sont pas parties à l'Accord Quadripartite du 3 septembre 1971.

Nº 95

Pour le Royaume-Uni de Grande-Bretagne et d'Irlande du Nord:

Après avoir consulté les gouvernements de la France et des Etats-Unis d'Amérique, la délégation du Royaume-Uni, prenant note de la déclaration N° 19 de l'U.R.S.S., déclare que rien, dans les travaux ou les résultats de la Conférence de radiodiffusion, n'est en contradiction avec l'une quelconque des dispositions de l'Accord Quadripartite du 3 septembre 1971.

La présente déclaration s'applique également aux déclarations similaires émanant d'Etats qui ne sont pas parties à l'Accord Quadripartite du 3 septembre 1971.

Nº 96

Pour l'Espagne:

Se référant aux déclarations N° 39 et 68 émanant respectivement de la Tunisie et l'Autriche, la délégation de l'Espagne tient à faire la déclaration suivante à propos de la fréquence 585 kHz:

- a) L'Administration espagnole est disposée à poursuivre l'étude visant à résoudre ce difficile problème de coordination.
- b) Au sujet de ce qui précède, il convient de tenir compte que la distance entre Madrid et Gafsa étant relativement courte (1 300 km), le brouillage causé par la station de Tunis réduit de façon inacceptable l'étendue de la zone de service de l'émetteur de Madrid. Il y a deux solutions possibles: ramener la puissance d'émission de la station de Gafsa à une valeur inférieure à 20 kW, ou bien changer de canal.

- c) Pour ce qui est de la coordination technique entre les assignations de l'Autriche et de Madrid, puisque les stations intéressées sont distantes de quelque 1 800 km, la délégation espagnole estime possible de parvenir à des conditions de coordination acceptables en équilibrant la puissance des stations de l'Autriche et de l'Espagne, et cela en réduisant de préférence la puissance indiquée pour les assignations de l'Autriche.
- d) Outre les considérations ci-dessus exposées, la délégation de l'Espagne se sent tenue d'ajouter que la situation défavorable de l'assignation de la fréquence 585 kHz à l'Espagne s'étend à la quasi-totalité des assignations espagnoles, et que cela est dû à la manière défectueuse et inéquitable dont le Plan a été élaboré, ainsi que cela a déjà été mentionné dans la réserve de la délégation espagnole qui figure dans la déclaration N° 46.

Pour l'Espagne:

En ce qui concerne la déclaration N° 34 de la République Socialiste Fédérative de Yougoslavie, qui fait mention des fréquences 684 kHz, 918 kHz et 1 134 kHz, la délégation espagnole tient à déclarer ce qui suit:

1. Fréquence 684 kHz

La demande présentée par la Yougoslavie pour la station de Belgrade spécifiant une puissance de 2 000 kW, la puissance de la station espagnole de Séville étant de 500 kW et ces deux stations étant distantes de 2 300 km, la délégation espagnole a proposé, au cours de toutes les négociations qui ont eu lieu, d'effectuer, dans des conditions techniques acceptables, une coordination entre les deux Administrations en vue d'équilibrer les puissances respectives des stations de Belgrade et de Séville, en réduisant de préférence la puissance de la station de Belgrade. Du fait de la différence entre les puissances inscrites dans le Plan, la zone de service de la station de Séville se trouve en effet réduite d'une manière inacceptable.

2. Fréquence 918 kHz

Sur cette fréquence, la puissance de la station yougoslave est de 600 kW alors que celle de la station espagnole d'Oviedo n'est que de 20 kW.

La coordination technique demanderait une sensible réduction de la puissance de la station yougoslave.

3. Fréquence 1 134 kHz

Le rapport entre les puissances inscrites pour les assignations de la Yougoslavie (1 650 kW) et pour celles de l'Espagne (75 kW) permet d'affirmer, comme au paragraphe 2, que le seul moyen d'aboutir à une bonne coordination technique serait que l'Administration yougoslave consente à une réduction de puissance.

4. Conclusion

Outre ce que contiennent les paragraphes précédents, la délégation espagnole tient à ajouter que la situation défavorable des assignations envisagées pour l'Espagne sur 684 kHz, 918 kHz et 1 134 kHz s'étend à la quasi-totalité des assignations prévues pour ce pays; cela résulte du manque d'équité et de l'imperfection de la méthode suivie lors de l'élaboration du Plan, ainsi que la délégation de l'Espagne l'a déjà fait observer dans les réserves qu'elle a formulées dans la déclaration N° 46.

Les délégations qui ont signé l'Accord, à l'exception de celle de la République d'Indonésie, ont également signé le Protocole final

PROTOCOLE ADDITIONNEL I

relatif à l'abrogation de la Convention européenne de radiodiffusion (Copenhague, 1948) et du Plan de Copenhague y annexé

Les délégués des Membres suivants de l'Union internationale des télécommunications:

Belgique, République Socialiste Soviétique de Biélorussie, République Populaire de Bulgarie, République du Burundi, Etat de la Cité du Vatican, Danemark, Finlande, France, Grèce, République Populaire Hongroise, Irlande, Italie, Royaume du Maroc, Monaco, Norvège, Royaume des Pays-Bas, République Populaire de Pologne, République Socialiste Soviétique d'Ukraine, République Socialiste de Roumanie, Royaume-Uni de Grande-Bretagne et d'Irlande du Nord, Confédération Suisse, République Socialiste Tchécoslovaque, Tunisie, Union des Républiques Socialistes Soviétiques, République Socialiste Fédérative de Yougoslavie

parties a la Convention européenne de radiodiffusion (Copenhague, 1948), réunis à Genève pour la Conférence administrative regionale de radiodiffusion à ondes kilométriques et hectométriques (Régions 1 et 3) convoquée conformément aux dispositions de la Convention internationale des télécommunications (Malaga-Torremolinos, 1973),

conviennent de ce aui suit

- 1. l'Accord régional relatif à l'utilisation par le service de radiodiffusion de fréquences dans les bandes des ondes hectometriques dans les Régions 1 et 3 et dans les bandes des ondes kilométriques dans la Région 1 et le Plan y annexé remplaceront la Convention européenne de radiodiffusion et le Plan de Copenhague y annexé, lesquels sont abrogés à l'exception des droits et obligations relatifs aux stations côtières énumérées dans le chapitre II du Plan de Copenhague; ces droits et obligations sont maintenus tant qu'ils n'auront pas été modifiés par voie d'accord entre les parties intéressées ou par une conférence compétente;
- 2. l'abrogation de la Convention européenne de radiodiffusion et du Plan de Copenhague, conformément au point 1. cidessus, prendra effet dès l'entrée en vigueur de l'Accord régional relatif à l'utilisation par le service de radiodiffusion de
 fréquences dans les bandes des ondes hectométriques dans les Régions 1 et 3 et dans les bandes des ondes kilométriques
 dans la Région 1 et du Plan y annexé, sous réserve que chacun des gouvernements parties à la Convention européenne de
 radiodiffusion ait déposé auprès du Gouvernement du Royaume du Danemark (dépositaire de ladite Convention) une
 déclaration par laquelle il accepte l'abrogation de la Convention européenne de radiodiffusion et du Plan y annexé;
- 3. lesdits Membres prendront les mesures nécessaires pour notifier au Gouvernement du Royaume du Danemark qu'ils conviennent officiellement d'abroger la Convention européenne de radiodiffusion et le Plan de Copenhague y annexé:
- 4. la procédure de notification relative à l'abrogation devra être mise en œuvre aussitôt que possible avant l'entrée en vigueur de l'Accord régional relatif à l'utilisation par le service de radiodiffusion de fréquences dans les bandes des ondes hectométriques dans les Régions 1 et 3 et dans les bandes des ondes kilométriques dans la Région 1 et du Plan y annexé;
- 5. le Gouvernement du Royaume du Danemark devrait être invité à informer les gouvernements parties à la Convention europeenne de radiodiffusion et le secrétaire général de l'Union internationale des télécommunications des notifications qui lui seront parvenues en vertu de l'alinéa 3. ci-dessus.

(Les délégations des pays mentionnés ci-dessus ont signé le Protocole additionnel 1)

On trouvera des explications relatives à l'abrogation de la Convention européenne de radiodiffusion et du Plan de Copenhague y annexé dans le Document N° 125 de la présente Conférence.

PROTOCOLE ADDITIONNEL II

portant abrogation de l'Accord régional relatif à l'utilisation par le service de radiodiffusion de fréquences de la bande des ondes hectométriques dans la Zone africaine de radiodiffusion (Genève, 1966) et du Plan y annexé

Les délégués des Membres suivants de l'Union internationale des télécommunications:

Algérie (République Algérienne Démocratique et Populaire), République Unie du Cameroun, République Centrafricaine, République Populaire du Congo, République de Côte d'Ivoire, République du Dahomey, République Arabe d'Egypte, Espagne, Ethiopie, France, République Gabonaise, Ghana, République de Guinée, République de Haute-Volta, République du Kenya, République du Libéria, Malawi, République Malgache, République du Mali, Royaume du Maroc, Maurice, République Islamique de Mauritanie, République du Niger, République Fédérale de Nigeria, République de l'Ouganda, Royaume-Uni de Grande-Bretagne et d'Irlande du Nord, République du Sénégal, République Unie de Tanzanie, République du Tchad, République Togolaise, République du Zaïre, République de Zambie

parties a l'Accord régional relatif à l'utilisation par le service de radiodiffusion de fréquences de la bande des ondes hectométriques dans la Zone africaine de radiodiffusion (Genève, 1966), réunis à Genève pour la Conférence administrative régionale de radiodiffusion à ondes kilométriques et hectométriques (Régions 1 et 3) convoquée conformément aux dispositions de la Convention internationale des télécommunications (Malaga-Torremolinos, 1973),

conviennent de ce qui suit

l'Accord régional relatif à l'utilisation par le service de radiodiffusion de fréquences de la bande des ondes hectométriques dans la Zone africaine de radiodiffusion (Genève, 1966) et le Plan y annexé sont abrogés et remplacés par l'Accord regional relatif à l'utilisation par le service de radiodiffusion de fréquences dans les bandes des ondes hectométriques dans les Régions 1 et 3 et dans les bandes des ondes kilométriques dans la Région 1 à la date d'entrée en vigueur de cet Accord.

(Les délégations des pays mentionnés ci-dessus ont signé le Protocole additionnel II)

PROTOCOLE ADDITIONNEL III

relatif à l'utilisation de la fréquence 522 kHz par le service de radiodiffusion en Autriche

Les délégués des Membres suivants de l'Union internationale des télécommunications:

République d'Afghanistan, Algérie (République Algérienne Démocratique et Populaire), République fédérale d'Allemagne, Autriche, République Populaire du Bangladesh, Belgique, République Socialiste Soviétique de Biélorussie, République Populaire de Bulgarie, République du Burundi, République de Chypre, Etat de la Cité du Vatican, Danemark, Finlande, France, République de Haute-Volta, République Populaire Hongroise, Iran, Irlande, Islande, Italie, Royaume Hachémite de Jordanie, Etat de Koweit, Royaume de Lesotho, Liban, République du Libéria, Principauté de Liechtenstein, Luxembourg, Malawi. Monaco, République Fédérale de Nigeria, Norvège, Royaume des Pays-Bas, République Populaire de Pologne, Portugal, République Démocratique Allemande, République Socialiste Soviétique d'Ukraine, République Socialiste de Roumanie, Royaume-Uni de Grande-Bretagne et d'Irlande du Nord, Suède, Confédération Suisse, République Socialiste Tchécoslovaque, République Togolaise, Tunisie, Turquie, Union des Républiques Socialistes Soviétiques, République Démocratique Populaire du Yémen

réunis a Genève pour la Conférence administrative régionale de radiodiffusion à ondes kilométriques et hectométriques (Régions 1 et 3), Genève, 1975, conformément aux dispositions de la Convention internationale des télécommunications (Malaga-Torremolinos, 1973).

prennent note de ce qui suit:

- 1. en vertu des dispositions du numéro 185 du Règlement des radiocommunications, l'Autriche est autorisée à maintenir en exploitation la station de radiodiffusion d'Innsbruck dans la bande 515-525 kHz, sous réserve que cette station ne cause pas de brouillage nuisible au service mobile maritime;
- 2. depuis de nombreuses années, un réseau synchronisé, comprenant trois émetteurs d'une puissance nominale de 10 kW chacun et quatre émetteurs de très faible puissance, est inscrit au nom de l'Autriche dans le Fichier de référence international des fréquences, sous la réserve expresse que, selon les dispositions du numéro 115 du Règlement, aucun brouillage nuisible ne soit causé au service assuré par des stations fonctionnant conformément aux dispositions de la Convention et du Règlement; l'exploitation de ces émetteurs sur la fréquence 520 kHz, avec une largeur de bande supérieure à 9 kHz, n'a donné lieu a aucune plainte en brouillage;
- 3. l'Autriche envisage de modifier la fréquence porteuse des assignations faites dans cette bande en la portant au multiple de 9 kHz le plus proche (522 kHz) afin d'assurer la compatibilité avec le plan de répartition des canaux adopté par la présente Conférence, de réduire la largeur de bande de rayonnement à 9 kHz et de porter de 10 à 30 kW la puissance de la station d'Innsbruck. Il est prévu que ces modifications prendront effet le 23 novembre 1978 à 0001 heure (TMG);
- 4. pour les stations susmentionnées, dont le fonctionnement est prévu sur la fréquence 522 kHz, la coordination seulement avec d'autres stations du service de radiodiffusion a été effectuée en appliquant tous les critères techniques (à l'exception de la valeur de la fréquence porteuse) adoptés par la présente Conférence. Les caractéristiques ainsi déterminées pour les stations prévues sur la fréquence 522 kHz sont indiquées en annexe;
- 5. les dispositions du présent Protocole additionnel n'ont aucune influence sur le statut des stations concernées vis-à-vis des stations des autres services de radiocommunication auxquels la bande 515-525 kHz est attribuée. Les dispositions des numeros 185 et 115 du Règlement demeurent donc applicables;
- 6. les dispositions du présent Protocole additionnel ne préjugent nullement des décisions que pourrait prendre la Conférence administrative mondiale des radiocommunications de 1979 à l'égard des dispositions du numéro 185 du Règlement des radiocommunications.

Annexe: 1

(Les délégations des pays mentionnés ci-dessus ont signé le Protocole additionnel III)

RESOLUTIONS ET RECOMMANDATIONS

RÉSOLUTION Nº 1

relative à la mise à jour du Fichier de référence international des fréquences à la date d'entrée en vigueur de l'Accord

La Conférence administrative régionale de radiodiffusion à ondes kilométriques et hectométriques (Régions 1 et 3), Genève, 1975,

notant

- a) que, aux termes de l'Article 5 de l'Accord, les administrations notifieront à l'I.F.R.B., conformément aux dispositions de l'Article 9 du Règlement des radiocommunications, les assignations de fréquence en service à la date de mise en vigueur de l'Accord;
- b) que, selon les dispositions de l'Article 9 du Règlement des radiocommunications, les Membres contractants peuvent détenir pour leurs assignations de fréquence certains droits attachés aux dates inscrites dans la colonne 2a ou 2b du Fichier de référence international des fréquences en regard des assignations de fréquence interessees vis-a-vis d'autres assignations de fréquence:
 - a des stations de radiodiffusion de Membres non contractants ou
 - a des stations d'autres services de radiocommunications;

considérant

- a) que, aux termes de l'Accord, les Membres contractants ont adopté pour leurs stations de radiodiffusion dans les Régions 1 et 3 les caractéristiques définies dans le Plan et que, par conséquent, ces stations fonctionneront à partir de la date de mise en vigueur de l'Accord conformément aux caractéristiques définies dans le Plan sauf dans les cas prévus dans la Résolution N° 7;
- b) que la Conférence a adopté un espacement uniforme des canaux qui conduit à modifier les fréquences porteuses de la plupart des stations en service et que cette modification peut, en particulier, défavorablement influencer les stations d'autres services de radiocommunications;

décide

- 1. que, le 23 novembre 1978 à 0001 heure (TMG), les administrations modifieront les fréquences porteuses ainsi que les autres caractéristiques de leurs stations de radiodiffusion en service pour les rendre conformes au Plan sauf dans les cas prévus dans la Résolution N° 7;
- 2. que les administrations notifieront à l'I.F.R.B. les assignations de fréquence qui seront ainsi modifiées. Cette notification doit se faire le plus tôt possible dans les délais spécifiés à l'Article 9 du Règlement des radiocommunications, c'est-à-dire 90 jours avant la date d'entrée en vigueur de l'Accord;
- 3. que, en plus des renseignements énumérés à l'Appendice 1 au Règlement des radiocommunications, les administrations indiqueront les assignations de fréquence dont l'inscription doit, en conséquence, être annulée dans le Fichier de référence;

- 4. qu'en application des dispositions de l'Article 9 du Règlement des radiocommunications, l'I.F.R.B. examinera ces notifications vis-à-vis des inscriptions existantes dans le Fichier de référence et qui sont relatives à des stations du service de radiodiffusion des Membres non contractants et des stations d'autres services de radiocommunications:
- 5. que selon sa conclusion l'I.F.R.B. inscrira ces assignations dans le Fichier de référence avec la date appropriée dans la colonne 2a ou 2b. Cependant lorsque la date à inscrire dans la colonne 2a ou la colonne 2b sera différente de celle déjà enregistrée, cette dernière sera transférée dans la colonne 13c avec un symbole approprie; en même temps, l'I.F.R.B. inscrira un autre symbole dans la colonne Observations pour indiquer que l'assignation est conforme au Plan et qu'elle est de ce fait considérée comme ayant le même statut que toute autre assignation conforme au Plan, quelle que soit la date inscrite dans la colonne 2a ou 2b pour cette autre assignation;
- 6. que, trois mois apres la date d'entrée en vigueur de l'Accord, l'I.F.R.B. enverra à chaque administration un relevé de ses assignations de fréquence inscrites dans le Fichier de référence pour lesquelles il n'aura reçu aucune notification et lui demandera instamment de lui communiquer les renseignements nécessaires pour la mise à jour du Fichier de référence;
- 7. que si, en dépit de ce rappel, l'I.F.R.B. ne reçoit pas de réponse, il inscrit un symbole dans la colonne Observations pour indiquer que l'assignation en question n'est pas conforme à l'Accord;

invite l'I.F.R.B.

a assister les administrations dans la misc en œuvre des dispositions de la présente Résolution.

RÉSOLUTION Nº 2

relative aux assignations de fréquence dans les canaux pour emetteurs de faible puissance (CFP)

La Conférence administrative régionale de radiodiffusion à ondes kilométriques et hectométriques (Régions 1 et 3), Genève, 1975,

notant

- a) que la planification pour les assignations de fréquence dans les CFP est fondée sur les critères définis dans l'Annexe 2 à l'Accord;
- b) que les dispositions de l'Article 4 (paragraphe 3.3) de l'Accord s'appliquent aux modifications ou aux adjonctions qui seront apportées aux assignations de fréquence dans les CFP après le 23 novembre 1978;

considérant

- a) qu'il n'a pas été possible, pendant la Conférence, d'examiner toutes les demandes concernant les CFP;
- b) que les assignations de fréquence dans les CFP pourraient être coordonnées entre les administrations avant la date d'entrée en vigueur de l'Accord;

décide

- 1. que les assignations de fréquence dans les CFP constituent l'Appendice 1 au Plan;
- 2. qu'un appendice provisoire établi par la Conférence comporte:
 - les assignations de fréquence pour lesquelles l'accord de toute autre administration n'est pas requis et celles pour lesquelles l'accord de toutes les administrations concernées a été obtenu;
 - les assignations de fréquence pour lesquelles l'accord de toutes les administrations concernées n'a pas pu être ou recherché ou obtenu pendant la Conférence; ces assignations comportent un symbole indiquant cette situation et, le cas échéant, la mention des pays avec lesquels un accord a déjà été conclu;

3. que les dispositions de l'Annexe 2 (paragraphe 4.8.1) à l'Accord seront appliquées par les administrations jusqu'au ler janvier 1978 pour coordonner les assignations de fréquences dans les CFP;

charge l'I.F.R.B.

- 1. de préparer l'Appendice 1 au Plan en vue de sa publication par le secrétaire général dans les délais prévus à cet effet; pour ce faire, l'I.F.R.B. modifie l'appendice provisoire en y incluant les assignations de fréquence qui ont pu ainsi être coordonnées et en supprimant celles qui n'ont pu l'être;
- 2. de fournir toute assistance aux administrations qui le lui demandent en vue de faciliter la coordination;

charge le secrétaire général

de publier avant le 1er mai 1978 l'Appendice ainsi préparé par l'I.F.R.B.

RÉSOLUTION Nº 3

relative à la poursuite de la coordination des demandes de fréquence des pays non représentés à la Conférence

La Conférence administrative régionale de radiodiffusion à ondes kilométriques et hectométriques (Régions 1 et 3), Genève, 1975,

rappelant

- a) qu'elle a invité les pays non représentés à la Conférence à présenter leurs demandes et à participer en temps opportun aux travaux de la Conférence de façon à ce qu'ils puissent prendre part aux négociations bilaterales et multilatérales nécessaires;
- b) qu'elle a demandé à l'I.F.R.B., en application des dispositions du numéro 479 du Règlement des radiocommunications, d'aider les pays non représentés à la Conférence en s'occupant des demandes qu'ils ont soumises et qui figurent dans la liste annexée à la présente Résolution;

notant

- a) que certains Membres de l'Union non représentés à la Conférence n'ont soumis leurs demandes que vers la fin de la Conférence;
- b) que certaines de ces demandes ont été présentées sans être accompagnées des données suffisantes pour permettre leur coordination;
- c) que ces demandes ont une influence non négligeable sur les demandes d'autres pays;
- d) qu'il n'a pas été possible de mener à bien la coordination des demandes entre les pays visés aux paragraphes a) et c) ci-dessus, par suite des difficultés de communication rencontrées par l'I.F.R.B.;

notant en outre

que les assignations relatives aux stations de radiodiffusion existantes des pays non représentés à la Conférence et inscrites au Fichier de référence ou dans le Plan africain (Genève, 1966) pourraient figurer dans le Plan:

considérant

- a) que les demandes des pays non représentés à la Conférence, qui n'ont pas pu être coordonnées durant celle-ci, pourront faire l'objet d'une coordination après la Conférence;
- b) que cette coordination pourrait éventuellement entraîner un changement de fréquence ou d'autres caracteristiques des assignations inscrites dans le Plan;

c) que ces modifications pourraient éventuellement avoir des répercussions sur les assignations d'administrations autres que celles dont les demandes sont directement concernées par les demandes de pays non représentes à la Conference;

décide

- 1. que les assignations à des stations de radiodiffusion des pays non représentés à la Conférence et inscrites au Fichier de référence ou dans le Plan africain (Genève, 1966) seront incluses dans le Plan sur les nouvelles fréquences porteuses du Plan les plus proches, sauf si elles présentent un tel degré d'incompatibilité avec les autres assignations figurant dans le Plan qu'une coordination est nécessaire. Dans ce cas, elles seront inscrites dans le Plan sous réserve qu'elles soient coordonnées conformément à la procédure décrite aux points 3 à 5 ci-dessous;
- 2. que si l'application de ladite procédure donne des résultats satisfaisants, les demandes de fréquences (dont la liste est annexée à la présente Résolution) soumises par des pays non représentés à la Conférence et pour lesquelles la coordination n'a pas été effectuée pendant la Conférence seront transférées dans le Plan;
- 3. que la coordination de ces demandes se poursuivra après la Conférence, entre les administrations concernees, par l'intermédiaire de l'I.F.R.B. On s'efforcera d'achever la coordination avant la date d'entrée en vigueur de l'Accord;
- 4. que si la coordination ci-dessus mentionnée requiert la modification d'assignations à des stations d'autres Membres contractants, la procédure applicable est celle de l'Article 4 de l'Accord. Dans tous les cas, les résultats de la coordination seront publiés dans la section spéciale de la circulaire hebdomadaire de l'I.F.R.B. dont il est fait mention dans l'Article 4, paragraphe 3.2.14, de l'Accord;
- 5. que les administrations intéressées devront s'efforcer de satisfaire les demandes figurant dans la liste ci-annexee, en acceptant notamment une augmentation du champ utilisable plus grande que l'augmentation indiquée dans l'Article 4, paragraphe 3.2.5, de l'Accord;

charge le secrétaire général

- 1. d'inviter les Membres de l'Union non représentés à la Conférence à adhérer dès que possible à l'Accord;
- 2. de porter les dispositions de la Convention internationale des télécommunications à la connaissance des pays qui ne sont pas Membres de l'Union pour inviter ceux-ci à adhérer à cet instrument, puis à l'Accord;
- 3. de porter la présente Résolution à la connaissance des pays qui ne sont pas Membres de l'Union afin de les inciter a adhérer à l'Accord;

charge l'I.F.R.B.

- 1. d'aider les administrations intéressées dans la recherche d'une solution satisfaisante;
- 2. d'inclure dans l'exemplaire original du Plan les assignations de fréquence résultant d'une application satisfaisante de la procédure décrite dans la présente Résolution.

Annexe: 1 (avec un appendice)

RÉSOLUTION Nº 4

relative à la détermination de la zone de service des stations figurant dans le Plan

La Conférence administrative régionale de radiodiffusion à ondes kilométriques et hectométriques (Régions 1 et 3), Genève, 1975,

notant

que les travaux de la Conférence ont été basés sur la détermination du champ utilisable de chaque assignation de fréquence dans la direction de la station brouilleuse principale;

considérant

- a) qu'il peut être utile de connaître le contour de la zone de service tel qu'il résulte du Plan;
- b) que, faute de temps, la détermination de ce contour n'a pu être effectuée durant la Conférence;

charge l'I.F.R.B.

de préparer, en vue de sa publication par le secrétaire général, un document indiquant, dans 18 azimuts autour de chaque station figurant dans le Plan lorsque la puissance nominale de l'émetteur est égale ou supérieure a 10 kW ou lorsqu'une antenne directive est utilisée, les valeurs suivantes:

- champ utilisable de l'onde de sol le jour et distance correspondante,
- champ utilisable de l'onde de sol la nuit et distance correspondante,
- champ utilisable de l'onde ionosphérique et distance correspondante.

RÉSOLUTION Nº 5

relative à l'adhésion à l'Accord de pays non représentés à la Conférence et qui n'ont pas soumis de demandes de fréquences

La Conférence administrative régionale de radiodiffusion à ondes kilométriques et hectométriques (Régions 1 et 3), Genève, 1975,

considérant

- a) que le Plan annexé à l'Accord ne peut être vraiment complet que s'il est tenu compte des besoins de tous les pays des Régions 1 et 3;
- du des pays Membres de l'Union invités à la Conférence n'ont pas pu, pour une raison ou pour une autre, participer aux travaux de la Conférence ni envoyer ieurs demandes de fréquences;
- c) qu'il convient d'encourager les pays qui ne sont actuellement pas Membres de l'Union à adhérer à l'Accord apres leur adhésion à la Convention internationale des télécommunications;
- d) que ces pays pourraient, au moment d'adhérer à l'Accord, éprouver quelques difficultés à faire inclure d'une manière satisfaisante leurs demandes de fréquences dans le Plan;
- e) que ces pays doivent être pleinement informés des droits et obligations qui découlent pour eux des dispositions de l'Accord;

décide

1. que lorsque l'un des pays mentionnés sous les considérants b) ou c) manifeste son intention d'adhérer à l'Accord, le secrétaire général l'informe immédiatement de la présente Résolution en l'invitant à communiquer à l'I.F.R.B. ses besoins en fréquences en vue de leur inclusion dans le Plan;

- 2. que si l'assistance de l'1.F.R.B. est requise, celui-ci procède à toute étude ou examen nécessaire et communique le résultat de ses travaux à l'administration concernée;
- 3. que l'administration concernée applique la procédure décrite à l'Article 4 de l'Accord, soit directement, soit par l'intermédiaire de l'I.F.R.B.;
- 4. que les administrations s'efforcent de trouver une solution satisfaisante aux besoins ainsi exprimés en acceptant notamment une augmentation du champ utilisable au-delà de la valeur spécifiée à l'Article 4 (paragraphe 3.2.5) de l'Accord.

RÉSOLUTION Nº 6

relative aux ondes kilométriques dans la Zone africaine de radiodiffusion

La Conférence administrative régionale de radiodiffusion à ondes kilométriques et hectométriques (Régions 1 et 3), Genève, 1975,

notant

- a) que la Conférence administrative mondiale des radiocommunications de 1979 pourrait modifier les conditions d'utilisation de la bande 150-285 kHz dans la Région 1;
- b) que, dans certaines parties de la Région 1, cette bande de fréquences n'est pas attribuée au service de radiodiffusion;
- c) que, faute de données expérimentales, les possibilités d'utilisation de la radiodiffusion à ondes kilométriques dans la Zone africaine de radiodiffusion sont encore inconnues;
- d) que, a l'exception de quelques demandes, les pays de la Zone africaine de radiodiffusion n'ont pas exprimé de besoins dans cette bande;

considérant

que ce fait ne doit pas être interprété comme signifiant que ces pays renoncent à l'utilisation de cette bande pour la radiodiffusion;

décide

- 1. qu'un Membre contractant appartenant à la Zone africaine de radiodiffusion appliquera la procédure de l'Article 4 lorsqu'il se proposera de mettre en service une station de radiodiffusion dans la bande 150-285 kHz conformément au Règlement des radiocommunications;
- 2. que les administrations devront s'efforcer de trouver une solution satisfaisante aux besoins ainsi exprimés, en acceptant notamment une augmentation du champ utilisable supérieure à la valeur prévue à l'Article 4 (paragraphe 3.2.5) de l'Accord.

RÉSOLUTION Nº 7

relative à l'utilisation des bandes de fréquences des ondes kilométriques partagées entre le service de radiodiffusion et d'autres services de radiocommunication

La Conférence administrative régionale de radiodiffusion à ondes kilométriques et hectométriques (Régions 1 et 3), Genève, 1975,

notant

que l'utilisation des bandes des fréquences des ondes kilométriques par des stations de radiodiffusion pourrait avoir des effets nuisibles pour les stations d'autres services de radiocommunication auxquels ces bandes sont attribuées dans les Régions 1 et 3 et particulièrement les stations du service de radionavigation aéronautique et du service mobile maritime, intéressant la sécurité de la vie humaine;

considérant

- a) le libellé du chapitre 8 du Rapport de la Première session;
- b) le fait que le Plan comporte un certain nombre de nouveaux émetteurs de radiodiffusion à ondes kilométriques et d'augmentations de puissance pour des émetteurs déjà en service, et que la probabilité de brouillage nuisible pour les services de sécurité s'en trouve considérablement accrue;

tenant compte

des dispositions des numéros 116 et 117 du Règlement des radiocommunications;

décide

- 1. qu'à partir de la date de la signature des Actes finals de la présente Conférence, de nouveaux émetteurs de radiodiffusion à ondes kilométriques ne seront pas mis en exploitation et que les caractéristiques des assignations actuelles en ondes kilométriques ne seront pas modifiées avant que la Conférence administrative mondiale des radiocommunications de 1979 n'ait décidé des attributions des bandes d'ondes kilométriques entre les services de radiocommunication intéressés;
- 2. que, neanmoins, au cas ou de telles modifications ou adjonctions n'augmenteraient pas les probabilités de brouillage nuisible aux assignations des autres services de radiocommunication, elles pourraient être mises en service;
- 3. qu'au cas ou de telles modifications ou adjonctions augmenteraient les probabilités de brouillage nuisible aux assignations d'autres services de radiocommunication, elles ne pourraient être mises en service qu'avec l'accord des administrations au nom desquelles des assignations de fréquence à ces stations, conformes au Tableau d'attribution des fréquences, sont inscrites dans le Fichier de référence;
- 4. qu'il convient de demander aux administrations des Membres contractants de porter la présente Résolution a la connaissance des organes compétents des autres services de radiocommunication de leurs pays respectifs et de leur recommander de s'abstenir, dans la mesure du possible, de mettre en œuvre de nouvelles stations susceptibles de causer un brouillage nuisible aux stations de radiodiffusion fonctionnant conformément au Tableau d'attribution des bandes de fréquences, en attendant les décisions que pourraient prendre la Conférence administrative mondiale des radiocommunications de 1979 au sujet de l'utilisation des bandes de fréquences partagées;

charge le secrétaire général

de porter la présente Résolution et la Recommandation Nº 2 à la connaissance de toutes les Administrations.

RÉSOLUTION Nº 8

relative à l'utilisation de systèmes de modulation permettant une économie de largeur de bande

La Conférence administrative régionale de radiodiffusion à ondes kilométriques et hectométriques (Régions 1 et 3), Genève, 1975,

considérant

- a) que l'application de systèmes de modulation permettant une économie de largeur de bande conduirait à une utilisation plus efficace des bandes d'ondes kilométriques et hectométriques;
- b) que l'adoption de tels systèmes poserait des problèmes en ce qui concerne les émetteurs, les récepteurs et la planification des fréquences;

invite le C.C.I.R.

a hâter ses études des méthodes de modulation permettant une économie de largeur de bande, en se reférant en particulier aux aspects techniques et d'exploitation de la modulation à bande latérale unique ou à bandes latérales indépendantes, tout en tenant compte des problèmes de compatibilité avec les récepteurs existants;

décide

- 1. que les stations de radiodiffusion peuvent provisoirement utiliser des procédés de modulation permettant une economie de largeur de bande, à condition que le brouillage causé, dans les mêmes canaux ou des canaux adjacents, ne dépasse pas le brouillage causé par l'application de la modulation à double bande latérale avec porteuse complète (A3);
- 2. que toute administration qui envisage d'utiliser ces classes d'émission recherche l'accord de toute administration interessee en appliquant la procédure de l'Article 4 de l'Accord.

RÉSOLUTION Nº 9

relative aux pays Membres non représentés à la Conférence et aux pays non Membres

La Conférence administrative régionale de radiodiffusion a ondes kilométriques et hectométriques (Régions 1 et 3), Genève, 1975,

considérant

- a) les dispositions de la Résolution N° 31 de la Conférence de plénipotentiaires (Malaga-Torremolinos, 1973) excluant le Gouvernement de la République Sudafricaine de la Conférence de plénipotentiaires et de toutes les autres conférences et réunions de l'Union internationale des télécommunications:
- b) la situation des pays Membres ou non Membres absents de la Conférence;
- c) les résolutions et dispositions adoptées par la Conférence pour apporter une solution adéquate aux différents problèmes de ces pays face à l'Accord et au Plan y annexé;

décide

que les dispositions et résolutions adoptées par la Conférence au profit des pays Membres ou non Membres absents de la Conférence ne seront pas appliquées au Gouvernement de la République Sudafricaine.

RECOMMANDATION Nº 1

relative à l'amélioration du Plan

La Conférence administrative régionale de radiodiffusion à ondes kilométriques et hectométriques (Régions 1 et 3), Genève, 1975,

notant

que la Conférence n'a pas abouti à des résultats satisfaisants pour tous les pays par suite du nombre excessif des demandes de fréquences;

considérant

que de ce fait, il n'a pas été possible de satisfaire, conformément aux critères adoptés tant à la Première qu'à la Deuxième session de la Conférence, les besoins justifiés de certains pays notamment des pays en voie de développement et des pays où se présentent des conditions particulières;

recommande

- 1. que les administrations poursuivent après la Conférence des négociations bilatérales et multilatérales en vue d'améliorer la situation des services de radiodiffusion dans les bandes des ondes hectométriques et kilométriques, notamment par des concessions mutuelles et par la réduction, d'un commun accord, des assignations inscrites dans le Plan dans les régions où le champ utilisable reste très élevé;
- 2. que, dans ce but, l'U.I.T. accorde aux administrations qui le demandent l'assistance nécessaire conformément aux dispositions de la Convention.

RECOMMANDATION Nº 2

relative au partage de la bande de fréquences des ondes kilométriques entre le service de radiodiffusion et d'autres services de radiocommunication (Région 1)

La Conférence administrative régionale de radiodiffusion à ondes kilométriques et hectométriques (Régions 1 et 3), Genève, 1975,

notant

- a) que dans une partie de la Région 1, le partage, sur la base de l'égalité des droits, de la bande 255-285 kHz entre le service de radiodiffusion et le service de radionavigation aéronautique se traduit en fait par des brouillages nuisibles aux radiophares aéronautiques;
- b) que le service de radionavigation aéronautique est un service de sécurité (numéro 69 du Règlement des radiocommunications), dont la protection efficace contre les brouillages nuisibles est indispensable à la sauvegarde de la vie humaine;

considérant

qu'il conviendrait d'éviter l'attribution de bandes partagees entre le service de radiodiffusion et d'autres services, tels que le service mobile maritime et le service de radionavigation aéronautique;

recommande

à la Conférence administrative mondiale des radiocommunications de 1979 d'examiner cette question en tenant compte des intérêts respectifs des services concernés.

RECOMMANDATION Nº 3

relative aux méthodes de prévision de la propagation de l'onde ionosphérique

La Conférence administrative régionale de radiodiffusion à ondes kilométriques et hectomètriques (Régions 1 et 3), Genève, 1975,

considérant

que les méthodes de prévision de la propagation de l'onde ionosphérique utilisées lors de l'établissement du Plan peuvent être améliorées dans l'avenir;

recommande aux administrations

d'utiliser, lors de leurs négociations bilatérales relatives aux modifications au Plan, les méthodes les plus recentes adoptées par le C.C.I.R. pour la prévision de la propagation de l'onde ionosphérique ou toute autre methode choisie d'un commun accord.

RECOMMANDATION Nº 4

relative à la convocation d'une conférence compétente chargée de la révision de l'Accord régional relatif à l'utilisation par le service de radiodiffusion de fréquences dans les bandes des ondes hectométriques dans les Régions 1 et 3 et dans les bandes des ondes kilométriques dans la Région 1

La Conférence administrative régionale de radiodiffusion a ondes kilométriques et hectométriques (Régions 1 et 3), Genève, 1975,

considérant

- a) l'évolution rapide des techniques de la radiodiffusion;
- b) les besoins futurs des pays en voie de développement, qui peuvent être importants tant dans les bandes des ondes kilométriques que dans celles des ondes hectométriques, afin que ces pays puissent satisfaire aux exigences de leurs services nationaux de radiodiffusion;
- c) qu'il n'a pas été possible d'inclure d'une façon satisfaisante à long terme les demandes de fréquences qui ont ete présentées dans les bandes d'ondes kilométriques et hectométriques au service de radiodiffusion a ondes kilométriques et hectométriques;
- d) que, de ce fait, l'Accord a été établi sur la base des besoins formulés pour les 14 prochaines années et qu'il est en conséquence absolument nécessaire de le réviser le plus tôt possible une fois écoulée cette période;

recommande au Conseil d'administration

de prévoir la réunion, en 1989, d'une conférence compétente chargée de réviser l'Accord, sauf s'il s'avère . necessaire de convoquer, conformément aux dispositions de la Convention, une telle conférence à une date plus rapprochée.

RECOMMANDATION Nº 5

relative à la publication d'un manuel de diagrammes de rayonnement des antennes directives utilisables par le service de radiodiffusion

La Conférence administrative régionale de radiodiffusion à ondes kilométriques et hectométriques (Régions 1 et 3), Genève, 1975,

considérant

- a) que les critères de calcul adoptés par la Conférence, contenus pour l'essentiel dans l'Annexe 2 à l'Accord, necessitent la connaissance du gain de l'antenne dans la direction de propagation;
- b) qu'il est utile de disposer de données à jour sur les caractéristiques des antennes de radiodiffusion à ondes kilométriques et hectométriques;
- c) que le secrétariat spécialisé du C.C.I.R., en accord avec l'Avis 414 et la Résolution 59 du C.C.I.R., est en train de préparer un manuel de diagrammes de rayonnement des antennes directives utilisables par le service de radiodiffusion à ondes kilométriques et hectométriques;
- d) qu'il est utile de pouvoir disposer des valeurs mesurées des diagrammes de rayonnement d'antenne, pour les comparer avec les diagrammes de rayonnement calculés;

recommande

que les administrations communiquent au directeur du C.C.I.R. tous les résultats de mesures dont elles disposent.

Visto, il Ministro per gli affari esteri FORLANI

TRADUZIONE NON UFFICIALE

N.B. - I testi facenti sede sono unicamente quelli indicati nell'accordo.

ACCORDO REGIONALE RELATIVO ALL'UTILIZZAZIONE DA PARTE DEL SERVIZIO DI RADIO-DIFFUSIONE DI FREQUENZE NELLE BANDE DELLE ONDE HECTOMETRICHE NELLE REGIONI 1 E 3 E NELLE BANDE DELLE ONDE KILOMETRICHE NELLA REGIONE 1.

PREAMBOLO

Allo scopo di facilitare le relazioni, la reciproca comprensione e la cooperazione nel campo della radiodiffusione ad onde kilometriche ed hectometriche;

In vista di migliorare l'utilizzazione delle bande di frequenze attribuite al servizio di radiodiffusione e di assicurare così una recezione soddisfacente delle emissioni di questo servizio per tutti i Paesi;

Riconoscendo che tutti i Paesi, grandi e piccoli, sono uguali nei diritti e che la messa in opera del presente accordo dovrà soddisfare nel miglior modo possibile i bisogni di tutti i Paesi ed in particolare i bisogni dei Paesi in via di sviluppo;

I delegati dei membri dell'Unione internazionale delle telecomunicazioni menzionati qui appresso, riuniti a Ginevra per una conferenza amministrativa regionale convocata conformemente alle disposizioni della convenzione internazionale delle telecomunicazioni (Malaga-Torremolinos, 1973), hanno adottato sotto riserva dell'approvazione delle loro rispettive autorità competenti, le seguenti disposizioni relative al servizio di radiodiffusione nelle regioni 1 e 3 per le bande delle onde hectometriche e nella regione 1 per le bande delle onde kilometriche.

(Omissis).

(Si omettono i nomi dei Paesi membri dell'UIT partecipanti alla Conferenza).

Articolo 1

Definizioni nel seguito delle presenti disposizioni

- Il termine Unione designa l'Unione internazionale delle telecomunicazioni.
- Il termine Segretario generale designa il Segretario generale dell'Unione.
- La sigla I.F.R.B. designa il Comitato internazionale di registrazione delle frequenze.
- La sigla C.C.I.R. designa il Comitato consultivo internazionale delle radiocomunicazioni.
- Il termine convenzione designa la convenzione internazionale delle telecomunicazioni.
- Il termine regolamento designa il regolamento delle radiocomunicazioni allegato alla convenzione.
- I termini regioni 1 e 3 designano le zone geografiche definite al n. 126 ed ai numeri 128 e 132 del regolamento di radiocomunicazioni, Ginevra, 1959.
 - Il termine accordo designa l'insieme costituito dal presente accordo ed i suoi allegati.
- Il termine piano designa il piano e le appendici che costituiscono l'allegato 1 al presente accordo.
- Il termine membro contraente designa ogni membro dell'Unione che abbia approvato l'accordo o che vi abbia aderito.
- Il termine amministrazione designa ogni servizio o ufficio governativo responsabile delle misure da prendere per eseguire gli obblighi della convenzione e del regolamento.

Articolo 2 Bande di frequenze

Le disposizioni del presente accordo si applicano alle bande di frequenze comprese tra 150 e 285 KHZ e tra i 525 e 1605 KHZ attribuite al servizio di radiodiffusione secondo l'articolo 5 del regolamento delle radiocomunicazioni, Ginevra, 1959.

Articolo 3 Esecuzione dell'accordo

1. I membri contraenti adottano per le loro stazioni di radiodiffusione funzionanti nelle regioni 1 e 3 nelle bande di frequenze facenti oggetto del presente accordo, le caratteristiche definite nel piano.

- 2. I membri contraenti non potranno procedere alla messa in servizio d'assegnazioni conformi al piano, modificare le caratteristiche tecniche delle stazioni specificate nel piano o mettere in servizio nuove stazioni, solo alle condizioni indicate agli articoli 4 e 5 del presente accordo (vedi risoluzione n. 7).
- 3. I membri contraenti s'impegnano a studiare di concerto le misure necessarie in vista di ridurre i disturbi nocivi che potranno risultare dall'applicazione dell'accordo.

Articolo 4

Procedura relativa alle modifiche al piano

1. Allorchè un membro contraente si propone di apportare una modificazione al piano, vale a dire:

modificare le caratteristiche d'una assegnazione di frequenza ad una stazione di radiodiffusione figurante nel piano, che questa stazione sia in servizio o no;

mettere in servizio un'assegnazione di frequenza ad una stazione di radiodiffusione non figurante nel piano;

modificare le caratteristiche di una assegnazione di frequenza ad una stazione di radiodiffusione per la quale la procedura del presente articolo è stata applicata con successo, che questa stazione sia in funzione o no;

annullare un'assegnazione di frequenza ad una stazione di radiodiffusione,

- la seguente procedura è applicata prima di ogni notificazione ai termini dell'articolo 9 del regolamento o dell'articolo corrispondente al regolamento radiocomunicazioni in vigore (vedi l'articolo 5 del presente accordo).
- 2. Nel seguito del presente articolo, l'espressione « assegnazione conforme all'accordo » designa ogni assegnazione di frequenza figurante nel piano o per la quale la procedura del suddetto articolo è stata applicata con successo.
- 3. Progetti di modificazione delle caratteristiche di una assegnazione o progetti di messa in servizio di una nuova assegnazione.
- 3.1. Ogni amministrazione che prevede la modifica delle caratteristiche di una assegnazione o l'attivazione di una nuova assegnazione ricerca l'accordo di ogni altra amministrazione della quale una assegnazione conforme all'accordo, nello stesso canale o in un canale adiacente, è considerata d'influenza sfavorevole (vedi i paragrafi 3.2.5. e 3.3.1.).
 - 3.2. Canali diversi da quelli per emittenti a bassa potenza.
- 3.2.1. Ogni amministrazione che prevede la modifica delle caratteristiche di una assegnazione o l'attivazione di una nuova assegnazione ne informa l'I.F.R.B. comunicandogli le caratteristiche relative alla modificazione o all'aggiunta, nella forma adottata nel piano e sue appendici.
- 3.2.1.1. Quando la modifica proposta è compresa nei limiti definiti al paragrafo 3.2.9., conviene far riferimento al paragrafo suddetto.
- 3.2.1.2. In ogni altro caso, allo scopo di pervenire all'accordo previsto al paragrafo 3.1., l'amministrazione comunica all'I.F.R.B. il nome delle amministrazioni con le quali essa ritiene che l'accordo debba essere ricercato, come pure i nomi delle amministrazioni con le quali è già stato concluso un accordo.
- 3.2.2. L'I.F.R.B. stabilisce, con l'ausilio dell'annesso 2 all'accordo, le amministrazioni le cui assegnazioni di frequenza conformi all'accordo sono considerate come sfavorevolmente influenzate ai sensi del paragrafo 3.2.5. L'I.F.R.B. comunica immediatamente i risultati dei suoi calcoli all'amministrazione che si propone di apportare la modifica al piano. L'I.F.R.B. include il nome di queste amministrazioni nelle informazioni ricevute e pubblica il tutto in una sezione speciale della sua circolare settimanale.
- 3.2.3. L'I.F.R.B. indirizza un telegramma alle amministrazioni menzionate nella sezione speciale della circolare settimanale attirando la loro attenzione sulla pubblicazione di queste informazioni e comunica loro il risultato dei suoi calcoli.
- 3.2.4. Ogni amministrazione che considera che dovrà figurare nella lista delle amministrazioni per le quali un'assegnazione di frequenza è considerata influenzata sfavorevolmente può domandare, dandone le motivazioni all'I.F.R.B. di includerla in questa lista. Una copia della domanda deve essere inviata all'amministrazione che esamina la modificazione al piano.
- 3.2.5. Ogni assegnazione può essere considerata influenzata sfavorevolmente allorchè il suo campo utilizzabile si trova aumentato di un valore uguale o superiore a 0,5 dB a causa di un progetto di modifica al piano. Il campo utilizzabile è calcolato in ciascun punto del contorno della zona di servizio che risulta dall'assegnazione inizialmente iscritta nel piano; allorchè essa è fatta oggetto d'una modifica conforme all'accordo, il calcolo tiene conto di questa modifica. L'aumento del campo utilizzabile è calcolato conformemente all'allegato 2 dell'accordo.
- 3.2.6. Ogni amministrazione che ricerca un accordo secondo i termini del paragrafo 3.1. per un orario di funzionamento di una stazione limitato alle ore del giorno può utilizzare, secondo

un mutuo accordo con le amministrazioni aventi assegnazioni sfavorevolmente influenzate, il metodo di calcolo scientifico definito ai paragrafi 3.3.4.3. o 3.4.3.3., secondo i casi previsti nell'allegato 2 all'accordo.

- 3.2.7. Ogni amministrazione può domandare all'amministrazione che prevede la modifica al piano le informazioni supplementari che essa ritiene necessarie per calcolare l'aumento del campo utilizzabile parimenti l'amministrazione che prevede la modifica al piano può domandare ad ogni amministrazione della quale ricerca l'accordo, le informazioni supplementari che essa ritiene necessarie. Le amministrazioni ne informano l'I.F.R.B.
- 3.2.8. Le osservazioni delle amministrazioni in merito alle informazioni pubblicate al termine delle disposizioni del paragrafo 3.2.2. sono indirizzate sia direttamente all'amministrazione che esamina la modifica, sia per l'intermediario dell'I.F.R.B. In ogni caso, l'I.F.R.B. dovrà essere informato che delle osservazioni sono state formulate.
 - 3.2.9. L'accordo previsto al paragrafo 3.1. non è richiesto se la modifica esaminata:

non aumenta in alcuna direzione l'apparente potenza irradiata equivalente a su antenna verticale corta, o ha per oggetto uno spostamento della stazione compreso nelle tolleranze specificate nel paragrafo 4.9. dell'allegato 2 all'accordo.

In questi due casi, l'amministrazione che prevede la modifica al piano, può mettere in esecuzione il suo progetto, con riserva dell'applicazione delle disposizioni dell'articolo 9 del regolamento (o dell'articolo corrispondente del regolamento di radiocomunicazioni in vigore).

- 3.2.10. Tutte le amministrazioni che non abbiano indirizzato le proprie osservazioni all'amministrazione interessata, sia direttamente, che tramite l'I.F.R.B., nel termine di 16 settimane dalla data della circolare settimanale menzionata al paragrafo 3.2.2., è considerata come aver aderito alla modificazione esaminata. Questa dilazione può essere prorogata di 8 settimane per l'amministrazione che domanda informazioni supplementari conformemente alle disposizioni del paragrafo 3.2.7.
- 3.2.11. Allorchè per pervenire ad un accordo, un'amministrazione è portata a modificare il suo progetto iniziale, essa applica di nuovo le disposizioni del paragrafo 3.2.1. e le procedure che ne derivano.
- 3.2.12. Se nessuna osservazione le perverrà entro i termini specificati al paragrafo 3.2.10., o se un accordo è intervenuto con le amministrazioni che abbiano formulato osservazioni, l'amministrazione che prevede la modifica può mettere in esecuzione il suo progetto; essa ne informa l'I.F.R.B. indicandogli le caratteristiche definitive dell'assegnazione come pure il nome delle amministrazioni con le quali un accordo è stato concluso.
- 3.2.13. Allorchè un progetto di modifica al piano interessa i Paesi in via di sviluppo, le amministrazioni ricercano tutte le soluzioni che permettano di assicurare lo sviluppo economico del sistema di radiodiffusione dei Paesi in via di sviluppo, tenendo conto dei principi enunciati a questo proposito nel preambolo dell'accordo.
- 3.2.14. L'I.F.R.B. pubblica in una sezione speciale della sua circolare settimanale le informazioni che riceve o, secondo quanto previsto dal paragrafo 3.2.12., accompagnandoli all'occorrenza con il nome delle amministrazioni con le quali le disposizioni del presente articolo sono state applicate con successo. Con l'accordo dei membri contraenti l'assegnazione beneficerà dello stesso statuto delle assegnazioni figuranti nel piano.
 - 3.3. Canali per emittenti a bassa potenza.
- 3.3.1. Ogni amministrazione che prevede la modifica delle caratteristiche di un'assegnazione di frequenza in un canale per emittenti a bassa potenza o l'attivazione di una nuova stazione in tale canale ricerca l'accordo di un'altra amministrazione allorchè la distanza tra la stazione in progetto e il punto più vicino al territorio di quest'altra amministrazione è inferiore al valore limite corrispondente indicato nel paragrafo 4.8.3. dell'allegato 2 all'accordo.
- 3.3.2. Dopo aver ottenuto l'accordo delle amministrazioni interessate, l'amministrazione che prevede la modifica ne informa l'I.F.R.B. e gli indica le caratteristiche della stazione come pure il nome delle amministrazioni con le quali un accordo è stato concluso.
- 3.3.3. L'I.F.R.B. pubblica queste informazioni in una sezione speciale della sua circolare settimanale. Con l'accordo dei membri contraenti quest'assegnazione beneficerà dello stesso statuto delle assegnazioni figuranti nel piano.
 - 3.3.4. L'amministrazione può allora mettere in esecuzione il suo progetto.
 - 3.4. Disposizioni aggiuntive per i canali delle bande ripartite con altri servizi.

Le disposizioni del presente articolo si applicano ugualmente alle assegnazioni di frequenza alle stazioni di radiodiffusioni nelle bande di frequenze divise con altri servizi di radiocomunicazione. Però, le sezioni speciali della circolare settimanale dell'I.F.R.B., menzionate ai paragrafi 3.2.2. e 3.2.3. non dovranno essere considerate, per questi altri servizi, se non a titolo d'informazione sul progetto in questione (vedere ugualmente la risoluzione n. 7).

- 3.5. Disposizioni comuni a tutti i canali.
- 3.5.1. Se nessun accordo interviene tra le amministrazioni interessate, l'I.F.R.B. procede ad ogni studio che gli possono chiedere queste amministrazioni, le informa del risultato di questo studio e presenta loro le raccomandazioni che potrà formulare allo scopo di risolvere il problema.
- 3.5.2. Ciascuna amministrazione può domandare, in qualsiasi momento della procedura descritta o prima di applicare questa procedura, l'aiuto dell'I.F.R.B., segnatamente nella ricerca dell'accordo di un'altra amministrazione.
- 3.5.3. Se, dopo la messa in opera della procedura definita nel presente articolo, non interviene alcun accordo tra le amministrazioni interessate, esse possono ricorrere alla procedura detinita all'articolo 5 della convenzione. Nel caso che esse lo decidano di comune accordo, le amministrazioni possono anche fare ricorso al protocollo aggiuntivo facoltativo alla convenzione.
- 3.5.4. In ogni momento le disposizioni pertinenti dell'articolo 9 del regolamento o dell'articolo corrispondente del regolamento delle radiocomunicazioni in vigore, saranno applicati all'atto della notificazione delle assegnazioni. Nel caso in cui un accordo non si è potuto ottenere, l'I.F.R.B. in seguito alla notificazione, procede all'iscrizione nello schedario di riferimento internazionale delle frequenze accompagnando questa iscrizione con un simbolo significante che essa è effettuata con la riserva di non causare alcun disturbo nocivo alle assegnazioni di frequenza conformi all'accordo.
- 3.5.5. L'I.F.R.B. terrà aggiornato un esemplare di riferimento al piano ed alla sua appendice 1 relativa ai canali per emittenti a bassa potenza; questo esemplare terrà conto dell'applicazione della procedura descritta nel presente articolo; a questo effetto, l'I.F.R.B. elaborerà un documento indicante gli emendamenti da apportare al piano ed alla sua appendice 1 a seguito delle modifiche effettuate conformemente alla procedura del presente articolo e con l'aggiunta delle nuove assegnazioni conformi all'accordo.
- 3.5.6. Il segretario generale sarà informato per mezzo dell'I.F.R.B. di ogni modificazione appertata al piano, egli pubblicherà in una forma appropriata una versione aggiornata del piano quando le circostanze lo giustificheranno ed in ogni caso tutti tre gli anni.
 - 4. Annullamento di un'assegnazione.

Allorchè un'assegnazione conforme all'accordo è definitivamente abbandonata che si tratti o no delle conseguenze d'una modifica (per esempio un cambiamento di frequenza), l'amministrazione interessata ne informa immediatamente l'I.F.R.B. Essa pubblica quest'informazione in una sezione speciale della sua circolare settimanale.

Articolo 5

Notificazione delle assegnazioni di frequenza

- 1. Ogni volta che un'amministrazione si propone di mettere in servizio un'assegnazione conforme all'accordo, essa notifica quest'assegnazione all'I.F.R.B. conformemente alle disposizioni dell'articolo 9 del regolamento (o dell'articolo corrispondente del regolamento di radiocomunicazioni in vigore). Ogni assegnazione di tale natura inscritta nello schedario di registrazione internazionale delle frequenze in conseguenza dell'applicazione delle disposizioni, porta, in aggiunta alla data scritta nella colonna 2a o nella colonna 2b, un simbolo speciale nella colonna « Osservazioni ».
- 2. Per quanto riguarda le relazioni tra i membri contraenti, tutte le assegnazioni di frequenza attivate in conformità all'accordo ed iscritte nello schedario di riferimento saranno considerate beneficianti dello stesso statuto qualunque sia la data inscritta nella colonna 2a o nella colonna 2b per ciascuna di esse.

Articolo 6 Accordi particolari

A completamento delle procedure previste all'articolo 4 dell'accordo e per facilitare la loro applicazione per migliorare l'utilizzazione del piano, i membri contraenti possono concludere particolari accordi conformemente alle disposizioni della convenzione e del regolamento.

Articolo 7

Campo d'applicazione dell'accordo

- 1. Il presente accordo impegna i membri contraenti nei loro mutui rapporti, ma non li impegna nei riguardi dei Paesi non contraenti.
- 2. Se un membro formula riserve sull'applicazione di una disposizione del presente accordo, gli altri membri non sono tenuti ad osservare questa disposizione nei loro rapporti con il membro che ha formulato le riserve.

Articolo 8

Approvazione dell'accordo

I membri notificheranno al più presto possibile la loro approvazione al presente accordo al segretario generale, il quale ne informerà subito gli altri membri dell'Unione.

Articolo 9

Adesione all'accordo

1. Ogni membro dell'Unione appartenente alle regioni 1 e 3 che non è firmatario dell'accordo, può aderirvi in ogni momento. Questa adesione si estende al piano ed alle sue eventuali modifiche al momento dell'adesione e non deve comportare alcuna riserva.

L'adesione è notificata al segretario generale, che ne informa gli altri membri dell'Unione.

- 2. L'adesione all'accordo inizia alla data in cui il segretario generale ne riceve notifica.
- 3. Ogni membro dell'Unione aderente all'accordo regionale per la zona africana di radiodiffusione (Ginevra 1966) che aderisce al presente accordo conformemente ai paragrafi 1 e 2 del presente articolo cessa, all'atto di adesione, d'aderire all'accordo regionale per la zona africana di radiodiffusione ed al piano allegato.

Articolo 10

Denuncia dell'accordo

- 1. Ogni membro contraente può denunciare il presente accordo in ogni momento con notifica indirizzata al segretario generale, che ne informa gli altri membri dell'Unione.
 - 2. La denuncia inizia dopo un anno che il segretario generale ha ricevuto la notifica.

Articolo 11

Abrogazione della convenzione europea di radiodiffusione (Copenaghen 1948) e del piano di Copenaghen allegato

Il protocollo addizionale I agli atti finali della Conferenza abroga la convenzione europea di radiodiffusione (Copenaghen 1948) e il piano di Copenaghen allegato.

Articolo 12

Abrogazione dell'accordo regionale per la zona africana di radiodiffusione (Ginevra 1966) e del piano allegato

Il protocollo addizionale II agli atti finali della Conferenza abroga l'accordo regionale per la zona africana di radiodiffusione (Ginevra 1966) e il piano di Copenaghen allegato.

Articolo 13

Entrata in vigore dell'accordo

Il presente accordo entrerà in vigore il 23 novembre 1978 all'ora 0001 TMG.

Articolo 14

Durata dell'accordo

- 1. L'accordo ed il piano allegato sono stati raggiunti allo scopo di soddisfare i bisogni dei servizi di radiodiffusione nelle bande interessate per un periodo di 11 anni a partire dalla data di entrata in vigore dell'accordo.
- 2. L'accordo resterà in vigore fino alla sua revisione da parte di una conferenza competente di membri dell'Unione appartenenti alle regioni 1 e 3.

In fede di che i delegati dei membri dell'Unione sopra menzionati, a nome delle loro rispettive autorità competenti, firmano il presente accordo in un solo esemplare redatto nelle lingue: inglese, cinese, spagnolo, francese, russo, il testo francese facendo fede in caso di contestazione. Questo esemplare rimarrà depositato negli archivi dell'Unione. Il segretario generale ne rimetterà una copia certificata conforme a ciascuno dei membri appartenenti alle regioni 1 e 3.

FATTO a Ginevra il 22 novembre 1975.

(Seguono le firme).

(Omissis).

(Si omettono i due allegati e il protocollo finale).

PROTOCOLLO ADDIZIONALE 1

relativo all'abrogazione della convenzione europea di radiodiffusione (Copenaghen 1948) e dell'annesso PLAN

Le delegazioni dei membri sotto indicati dell'Unione internazionale delle telecomunicazioni: (Omissis).

(Si omettono i nomi dei Paesi membri dell'UIT).

Parti della convenzione europea di radiodiffusione (Copenaghen 1948) riuniti a Ginevra per la Conferenza amministrativa regionale di radiodiffusione a onde chilometriche ed ettometriche (regioni 1 e 3) convocata conformemente alle disposizioni della convenzione internazionale delle telecomunicazioni (Malaga-Torremolinos, 1973), convenzono quanto segue:

- 1. l'accordo regionale relativo all'utilizzazione per il servizio di radio-diffusione delle frequenze nelle bande delle onde hectometriche nelle regioni 1 e 3 nelle bande delle onde chilometriche nella regione 1 e il PLAN annesso sostituiranno la convenzione europea di radiodiffusione e il PLAN di Copenaghen annesso i quali sono abrogati, ad eccezione dei diritti e obbligazioni relativi alle stazioni costiere annotate nel cap. 2 del PLAN di Copenaghen; questi diritti ed obbligazioni sono mantenuti finchè essi non saranno stati modificati con un accordo fra le parti interessate o con una speciale Conferenza;
- 2. l'abrogazione della convenzione europea di radiodiffusione e del PLAN di Copenaghen, conformemente al punto 1 sopra citato, sarà operante con l'entrata in vigore dell'accordo regionale relativo all'utilizzazione per il servizio di radiodiffusione delle frequenze nelle bande delle onde hectometriche nelle regioni 1 e 3 e nelle bande delle onde chilometriche nella regione 1 e del PLAN annesso, con riserva che ciascuno dei Governi che partecipano alla convenzione europea di radiodiffusione abbia depositato presso il Governo dancse (depositario di detta convenzione) una dichiarazione con la quale accetta l'abrogazione della convenzione europea di radiodiffusione e del PLAN;
- 3. i citati membri prenderanno le misure necessarie per notificare al Governo di Danimarca che essi sono d'accordo ufficialmente per abrogare la convenzione europea di radiodiffusione e PLAN annesso;
- 4. la procedura di notificazione relativa all'abrogazione dovrà essere messa in opera al più presto possibile prima dell'entrata in vigore dell'accordo regionale relativo all'utilizzazione per il servizio di radiodiffusione delle frequenze nelle bande delle onde hectometriche nelle regioni 1 e 3 e nelle bande delle onde chilometriche nella regione 1 e del PLAN annesso;
- 5. il Governo di Danimarca dovrà essere invitato a informare i Governi che fanno parte della convenzione curopea di radiodiffusione e il segretario generale dell'Unione internazionale delle telecomunicazioni delle adesioni che gli saranno pervenute in virtù di quanto indicato al comma 3.
 - (Le delegazioni dei Paesi sopra indicati hanno firmato il protocollo addizionale I).

PROTOCOLLO ADDIZIONALE II

riguardante l'abrogazione dell'accordo regionale relativo all'utilizzazione da parte del servizio di radiodiffusione di frequenze della banda delle onde hectometriche nella zona africana di radiodiffusione (Ginevra 1966) e del PLAN annesso.

Le delegazioni dei membri sottoindicati dell'Unione internazionale delle telecomunicazioni: (Omissis)

(Si omettono i nomi dei Paesi membri dell'UIT).

Parti all'accordo regionale relativo all'utilizzazione per il servizio di radiodiffusione delle frequenze della banda delle onde hectometriche nella zona africana di radiodiffusione (Ginevra 1966), riuniti a Ginevra per la Conferenza amministrativa regionale di radiodiffusione a onde chilometriche ed hectometriche (regioni 1 e 3) convocate uniformemente alle disposizioni della convenzione internazionale delle telecomunicazioni (Malaga-Torremolinos 1973), convengono quanto segue:

L'accordo regionale relativo all'utilizzazione da parte del servizio di radiodiffusione di frequenze della banda delle onde hectometriche nella zona africana di radiodiffusione (Ginevra 1966) e il PLAN allegato sono abrogati e sostituiti con l'accordo regionale relativo all'utilizzazione da parte del servizio di radiodiffusione di frequenze nelle bande delle onde hectometriche nelle regioni 1 e 3 e nelle bande delle onde chilometriche nella regione 1 alla data dell'entrata in vigore dell'accordo.

(Le delegazioni dei Paesi sopra indicati hanno firmato il protocollo addizionale II).

PROTOCOLLO ADDIZIONALE III

relativo all'utilizzazione della frequenza 522 kHz da parte del servizio di radiodiffusione in Austria

Le delegazioni dei membri sotto indicati dell'Unione internazionale delle telecomunicazioni: (Omissis).

(Si omettono i nomi dei Paesi membri dell'UIT).

Riuniti a Ginevra per la Conferenza amministrativa regionale di radiodiffusione con onde chilometriche ed hectometriche (regioni 1 e 3) Ginevra 1975, conformemente alle disposizioni della convenzione internazionale delle telecomunicazioni (Malaga-Torremolinos 1973), prendono nota di quanto segue:

- 1. in virtù delle disposizioni del n. 185 del regolamento delle radiocomunicazioni, l'Austria è autorizzata a tenere in esercizio la stazione di radiodiffusione di Innsbruck nella banda 515-525 kHz, tenuto conto che questa stazione non causa disturbo al servizio mobile marittimo;
- 2. dopo numerosi anni, una rete sincronizzata, comprendente tre emittenti con una potenza nominale di 10 kW ciascuno e 4 emittenti di leggerissima potenza, è assegnata all'Austria nello schedario delle assegnazioni internazionali delle frequenze, esprimendo la riserva, secondo le disposizioni del n. 115 del regolamento, che non siano causa di disturbi al servizio delle stazioni funzionanti conformemente alle disposizioni della convenzione del regolamento; l'esercizio di queste emittenti sulla frequenza 520 kHz, con una larghezza di banda superiore a 9 kHz, non ha dato luogo a disturbi;

- 3. l'Austria considera di modificare la frequenza portante delle assegnazioni fatte in questa banda portandola al multiplo portante di 9 kHz (522 kHz) al fine di assicurare la compatibilità con il piano di ripartizione dei canali adottato da questa Conferenza, di ridurre la larghezza di banda di irradiazione a 9 kHz e di portare da 10 a 30 kW la potenza della stazione di Innsbruck. E' previsto che questi cambiamenti avranno effetto dal 23 novembre 1978 alle ore 0001 (TMG);
- 4. Per le stazioni sopra dette il cui funzionamento è previsto sulla frequenza 522 kHz, la coordinazione con le altre stazioni del servizio di radiodiffusione è stata effettuata applicando tutti i criteri tecnici (con eccezione del valore della frequenza portante) adottati con la presente Conferenza. Le caratteristiche così adottate per le stazioni previste sulla frequenza 522 kHz sono indicate in allegato;
- 5. Le disposizioni del presente protocollo non hanno alcuna influenza sullo statuto concernente le stazioni di altri servizi di radiocomunicazione ai quali è stata assegnata la banda 515-525 kHz. Le disposizioni dei numeri 185 e \$15 del regolamento sono subito applicabili;
- 6. Le disposizioni del presente protocollo non pregiudicano affatto le decisioni che potranno essere prese dalla Conferenza amministrativa mondiale di radiocomunicazioni del 1979 tenendo presente le disposizioni del n. 185 del regolamento delle radiocomunicazioni.

Allegati:

(Le delegazioni dei Paesi suddetti hanno firmato il protocollo 3).

(Le delegazioni dei Paesi sopra indicati hanno firmato il protocollo addizionale III).

(Omissis)

(Si omette l'allegato).

RISOLUZIONI E RACCOMANDAZIONI

Risoluzione n. 1 - relativa all'aggiornamento dello schedario di registrazione internazionale delle frequenze alla data dell'entrata in vigore dell'accordo.

La Conferenza amministrativa regionale di radiodiffusione a onde kilometriche ed hectometriche (regionì 1 e 3), Ginevra 1975.

Notando:

- a) che ai sensi dell'art. 5 dell'accordo le amministrazioni notificheranno all'I.F.R.B., conformemente alle disposizioni dell'art. 9 del regolamento delle radiocomunicazioni, le assegnazioni di frequenza in servizio alla data di entrata in vigore dell'accordo;
- b) che secondo le disposizioni dell'art. 9 del regolamento di radiocomunicazioni, i membri contraenti possono acquisire per le loro assegnazioni di frequenza certi diritti connessi alle date riportate nella colonna 2/a o 2/b dello schedario di registrazione internazionale delle frequenze in relazione alle assegnazioni di frequenza interessate nei confronti di altre assegnazioni di frequenza:
 - a stazioni di radiodiffusione di membri non contraenti o
 - a stazioni di altri servizi di radiocomunicazione.

Considerando:

- a) che, in base all'accordo, i membri contraenti hanno adottato per le loro stazioni di radiodiffusione nelle regioni 1 e 3 le caratteristiche definite nel piano e che di conseguenza, queste stazioni funzioneranno a partire dalla data di entrata in vigore dell'accordo, conformemente alle caratteristiche definite nel piano salvo i casi previsti nella risoluzione n. 7;
- b) che la conferenza ha adottato un distanziamento uniforme dei canali che porta a modificare le frequenze portanti della maggior parte delle stazioni in servizio e che questa modifica può in particolare influenzare sfavorevolmente le stazioni di altri servizi di radiocomunicazione.

Decide:

- 1. che il 23 novembre 1978 all'ora 0001 (TMG), le amministrazioni modificheranno le frequenze portanti così come le altre caratteristiche delle loro stazioni di radiodiffusione in servizio per renderle conformi al piano salvo nei casi previsti nella risoluzione n. 7;
- 2. che le amministrazioni notificheranno all'I.F.R.B. le assegnazioni di frequenza che saranno così modificate. Questa notificazione deve essere fatta al più presto possibile nei termini specificati all'art. 9 del regolamento delle radiocomunicazioni e cioè 90 giorni prima dell'entrata in vigore dell'accordo;
- 3. che, in aggiunta alle informazioni contenute nell'appendice 1 del regolamento delle radiocomunicazioni, le amministrazioni indicheranno le assegnazioni di frequenza la cui iscrizione deve essere di conseguenza annullata nello schedario di registrazione;
- 4. che, in applicazione delle disposizioni dell'art. 9 del regolamento delle radiocomunicazioni, l'I.F.R.B. esaminerà queste notificazioni in relazione alle iscrizioni esistenti nello schedario di registrazione e che sono relative a stazioni del servizio di radiodiffusione dei membri non contraenti e delle stazioni di altri servizi di radiocomunicazione:
- 5. che, secondo la sua conclusione l'I.F.R.B. iscriverà queste assegnazioni nello schedario di registrazione con la data relativa nella colonna 2/a o 2/b. Tuttavia quando la data da iscrivere nella colonna 2/a o la colonna 2/b sarà differente da quella già registrata, quest'ultima sarà trasferita nella colonna 13/c con un simbolo appropriato; nello stesso tempo l'I.F.R.B. iscriverà un altro simbolo nella colonna «Osservazioni» per indicare che l'assegnazione è conforme al piano e che pertanto essa viene considerata iscritta allo stesso statuto di ogni altra assegnazione conforme al piano;
- 6. che, tre mesi dopo la data di entrata in vigore dell'accordo l'I.F.R.B. invierà ad ogni amministrazione un estratto delle sue assegnazioni di frequenze iscritte nello schedario di registrazione e per le quali non avrà ricevuto alcuna notifica e chiedendole di comunicarle immediatamente le informazioni necessarie per l'aggiornamento dello schedario di registrazione;
- 7. che, se nonostante questo richiamo l'I.F.R.B. non riceve risposta, iscrive un simbolo nella colonna « Osservazioni » per indicare che l'assegnazione in questione non è conforme all'accordo.

Invita:

ad assistere le amministrazioni nella messa a punto delle disposizioni della presente risoluzione.

Risoluzione n. 2 - relativa alle assegnazioni di frequenza nei canali per emittenti di bassa potenza (CFP).

La Conferenza amministrativa regionale di radiodifiusione a onde kilometriche (regioni 1 e 3), Ginevra 1975,

- a) che la pianificazione per le assegnazioni di frequenza nella CFP è fondata sui criteri definiti nell'allegato 2 all'accordo;
- b) che la disposizione dell'art. 4 (paragr. 33) dell'accordo si applica alle modifiche e alle aggiunte che saranno apportate alle assegnazioni di frequenze nelle CFP dopo il 23 novembre 1978.

Considerando:

- a) che non è stato possibile, durante la Conferenza esaminare tutte le domande concernenti le CFP;
- b) che, le assegnazioni di frequenza nelle CFP potranno essere coordinate tra le amministrazioni prima della data di entrata in vigore dell'accordo.

Decide:

- 1. che le assegnazioni di frequenza nelle CFP costituiscono l'appendice 1 al piano;
- 2. che un'appendice provvisoria stabilita dalla Conferenza comporta:
- le assegnazioni di frequenza per le quali l'accordo di ogni altra amministrazione non è richiesto e quelle per le quali l'accordo di tutte le amministrazioni interessate è stato ottenuto;
- le assegnazioni di frequenza per le quali l'accordo di tutte le amministrazioni interessate non può più essere o richiesto od ottenuto durante la Conferenza; queste assegnazioni comportano un simbolo indicante questa situazione e all'occorrenza la menzione dei paesi con i quali un accordo è già stato concluso;
- 3. che le disposizioni dell'allegato 2 (paragr. 481) all'accordo saranno applicate dalle amministrazioni fino al gennato 1978 per coordinare le assegnazioni di frequenza nelle CFP.

Incarica l'I.F.R.B.:

- 1. di preparare l'appendice 1 al piano in vista della sua pubblicazione da parte del segretario generale nei termini previsti a questo scopo; per far ciò l'I.F.R.B. modifica l'appendice provvisoria includendovi le assegnazioni di frequenza che possono così essere coordinate e sopprimendo quelle che non possono esserlo;
- 2, di fornire tutta l'assistenza alle amministrazioni che ne fanno richiesta allo scopo di facilitare la coordinazione.

Incarica il segretario generale:

di pubblicare prima del 1º gennaio 1978 l'allegato così preparato dall'I.F.R.B.

Risoluzione n. 3 - ricerca relativa alla coordinazione delle domande di frequenza dei paesi non rappresentati alla Conferenza.

La Conferenza amministrativa regionale di radiodiffusione a onde kilometriche ed hectometriche (regioni 1 e 3), Ginevra 1975.

Ricordando

- a) che essa ha invitato i Paesi non rappresentati alla Conferenza a presentare le loro domande ed a partecipare a tempo opportuno ai lavori della Conferenza in modo che possano prendere parte ai negoziati bilaterali e unilaterali;
- b) che ha chiesto all'I.F.R.B., in applicazione delle disposizioni del n. 479 del regolamento di radiocomunicazioni, d'aiutare i Paesi non rappresentati alla Conferenza occupandosi delle domande che gli hanno presentato e che figurano nella lista allegata alla presente risoluzione.

Notando:

- a) che alcuni membri dell'Unione non rappresentati alla Conferenza hanno presentato le loro domande solo alla fine della Conferenza;
- b) che, alcune domande sono state presentate senza essere accompagnate da dati sufficienti per permettere la loro coordinazione;
 - c) che queste domande hanno un'influenza non trascurabile sulle domande di altri Paesi;
- d) che non è stato possibile condurre a buon fine la coordinazione delle domande tra i Paesi considerati ai paragrafi a) e c) qui sopra, in seguito alle difficoltà di comunicazione riscontrate dall'I.F.R.B.

Notando inoltre

che le assegnazioni relative alle stazioni di radiodiffusione esistenti dei Paesi non rappresentati alla Con ferenza ed iscritti allo schedario di registrazione o nel piano africano (Ginevra 1966) potranno figurare nel piano.

Considerando:

- a) che le domande dei Paesi rappresentati alla Conferenza che non hanno potuto essere coordinate in quella sede, potranno essere oggetto di una coordinazione dopo la Conferenza;
- b) che questa coordinazione potrà eventualmente portare ad un cambiamento di frequenza o di altre caratteristiche delle assegnazioni iscritte nel piano;
- c) che queste modifiche potranno eventualmente avere delle ripercussioni sulle assegnazioni di amministrazioni diverse da quelle le cui domande sono direttamente interessate dalle domande di Paesi non rappresentati alla Conferenza.

Decide:

1. che le assegnazioni a stazioni di radiodiffusione di Paesi non rappresentati alla Conterenza e iscritti allo schedario di registrazione nel piano africano (Ginevra 1956) saranno incluse nel piano sulle nuove trequenze portanti del piano, più vicine, salvo che esse presentino un tale grado di incompatibilità con le altre assegnazioni figuranti nel piano che renda necessaria una coordinazione. In questo caso, esse saranno iscritte nel piano con riscriva di essere coordinate conformemente alla procedura descritta ai punti 3 e 5 qui sopra;

- 2. che, se l'applicazione di detta procedura da risultati soddisfacenti, le domande di frequenza (la cui lista è annessa alla presente risoluzione) sottoposte da Paesi non rappresentati alla Conferenza e per i quali la coordinazione non è stata effettuata durante la Conferenza saranno trasferite nel piano;
- 3. che la coordinazione di queste domande continuerà dopo la Conferenza, tra le amministrazioni interessate, tramite l'I.F.R.B. Ci si sforzerà di raggiungere la coordinazione prima della data di entrata in vigore dell'accordo:
- 4. che se la coordinazione qui sopra menzionata richiede la modifica delle assegnazioni a stazioni di altri membri contraenti, la procedura applicabile è quella dell'art. 4 dell'accordo. In tutti i casi, i risultati della coordinazione saranno pubblicati nella sezione speciale della circolare settimanale dell'I.F.R.B. di cui è fatta menzione nell'art. 4, paragrafo 3.2.14., dell'accordo;
- 5. che le amministrazioni dovranno sforzarsi di soddisfare le domande figuranti nella lista qui annessa accettando in particolare un aumento del campo utilizzabile più grande dell'aumento indicato nell'art. 4, paragrafo 3.2.5., dell'accordo.

Incarica il segretario generale:

- 1. d'invitare i membri dell'Unione non rappresentati alla Conferenza ad aderire prima possibile all'accordo;
- 2 di portare le disposizioni della convenzione internazionale di telecomunicazione a conoscenza dei Paesi che non sono membri dell'Unione, per invitarli ad aderire a questa, poi all'accordo;
- 3 di far conoscere la presente risoluzione ai Paesi che non sono membri dell'Unione allo scopo di invitarli ad aderire all'accordo.

Incarica l'I.F.R.B.:

- 1 d'aiutare le amministrazioni interessate nella ricerca di una soluzione soddisfacente;
- 2. di includere nell'esemplare originale del piano le assegnazioni di frequenze risultanti da una applicazione soddisfacente della procedura descritta nella presente risoluzione.

(Omissis).

(Si omette l'allegato).

Risoluzione n. 4 - relativa alla determinazione della zona di servizio delle stazioni figuranti nel piano.

La Conferenza amministrativa regionale di radiodiffusione ad onde kilometriche ed hectometriche (regioni 1 e 3), Ginevra 1975.

Notando:

che i lavori della Conferenza sono stati basati sulla determinazione del campo utilizzabile di ciascuna assegnazione di frequenza nella direzione della principale stazione che disturba.

Considerando:

- a) che può essere utile conoscere il contorno della zona di servizo come risulta dal piano;
- b) che, in mancanza di tempo la determinazione di questo contorno non può essere effettuata durante la Conferenza.

Incarica l'I.F.R.B.:

di preparare, in vista della sua pubblicazione per il segretario generale, un documento indicante, nei 18 azimuts intorno a ciascuna stazione figurante nel piano quando la potenza nominale dell'emittente è uguale o superiore a 10 km o quando un'antenna direttiva è utilizzata, i seguenti valori:

campo utilizzabile dell'onda di suolo il giorno e la distanza corrispondente;

campo utilizzabile dell'onda di suolo, la notte e distanza corrispondente;

campo utilizzabile dell'onda ionosferica e distanza corrispondente.

Risoluzione n. 5 - relativa all'adesione all'accordo di Paesi non rappresentati alla Conferenza e che non hanno presentato richieste di frequenze.

La Conferenza amministrativa regionale di radiodiffusione ad onde kilometriche ed hectometriche (regioni 1 e 3) Ginevra 1975.

Considerando:

- a) che il piano allegato all'accordo non può essere veramente completo se non si tiene conto dei bisogni di tutti i Paesi delle regioni 1 e 3;
- b) che dei Paesi membri dell'Unione invitati alla Conferenza non hanno potuto, per una ragione o per un'altra, partecipare ai lavori della Conferenza né inviare le loro richieste di frequenze;
- c) che conviene incoraggiare i Paesi che non sono attualmente membri dell'Unione ad aderire all'accordo dopo la loro adesione alla convenzione internazionale di telecomunicazioni;
- d) che questi paesi potranno al momento d'aderire all'accordo trovare qualche difficoltà a far includere in maniera soddisfacente le loro domande di frequenza nel piano;
- e) che questi paesi debbono essere pienamente informati dei diritti ed obbligazioni che gli derivano dalle disposizioni dell'accordo.

Decide

- 1. che quando uno dei Paesi menzionati ai punti b) o c) manifesta la sua intenzione d'aderire all'accordo il segretario generale la informa immediatamente della presente risoluzione invitandolo a comunicare all'I.F.R.B. i suoi bisogni in frequenze in vista della loro inclusione nel piano;
- 2. che se ne richiede l'assistenza l'I.F.R.B. procede a tutti gli studi ed esami necessari e comunica il risultato dei suoi lavori all'amministrazione interessata;
- 3. che l'amministrazione interessata applica la procedura descritta all'art. 4 dell'accordo sia direttamente, sia tramite l'I.F.R.B.;
- 4. che le amministrazioni si sforzano di trovare una soluzione soddisfacente ai bisogni così espressi accettandone in particolare un aumento del campo utilizzabile al di là del valore specificato all'art. 4 (paragr. 3.25.) dell'accordo.

Risoluzione n. 6 - relativa alle onde kilometriche nella zona africana di radiodiffusione.

La Conferenza amministrativa regionale di radiodiffusione ad onde kilometriche ed hectometriche (regioni 1 e 3) Ginevra 1975.

Notando:

- a) che la Conferenza amministrativa mondiale di radiocomunicazioni del 1979 potrà modificare le condizioni d'utilizzazione della banda 150-285 kHz nella regione;
- b) che, in alcune parti della regione 1, questa banda di frequenze non e attribuita al servizio di radio diffusione:
- c) che, in mancanza di dati sperimentali, le possibilità d'utilizzazione della radiodiffusione ad onde kilometriche nella zona africana di radiodiffusione sono ancora sconosciute;
- d) che, fatta eccezione di alcune domande, i Paesi della zona africana di radiodiffusione non hanno espresso il bisogno di questa banda.

Considerando:

che questo fatto non può essere interpretato come segno che questi Paesi rinuncino all'utilizzazione di questa banda per la radiodiffusione.

Decide

- 1. che un membro contraente appartenente alla zona africana di radiodiffusione applicherà la procedura dell'art. 4 quando si proporrà di attivare una stazione di radiodiffusione nella banda 150-285 kHz conformemente al regolamento di radiocomunicazioni;
- 2. che le amministrazioni dovranno sforzarsi di trovare una soluzione soddisfacente ai bisogni così espressi, accettando in particolare un aumento di campo utilizzabile superiore al valore previsto all'art. 4 (paragr. 325.) dell'accordo.
- Risoluzione n. 7 relativa all'utilizzazione di bande di frequenza delle onde kilometriche divise tra il servizio di radiodiffusione ed altri servizi di radiocomunicazioni.
- La Conferenza amministrativa regionale di radiodiffusione ad onde kilometriche ed hectometriche (regioni 1 e 3) Ginevra 1975.

Notando:

che l'utilizzazione di bande di frequenze di onde kilometriche da parte di stazioni di radiodiffusione potrebbe avere effetti nocivi per le stazioni d'altri servizi di radiocomunicazione ai quali queste bande sono attribuite nelle regioni 1 e 3 e particolarmente le stazioni di servizio di radionavigazione aeronautica e del servizio mobile marittimo interessante la sicurezza della vita umana.

Considerando:

- a) la redazione del capitolo 8 del rapporto della prima sessione;
- b) il fatto che il piano comporta un certo numero di nuove emittenti di radiodiffusione ad onde kilometriche e d'aumenti di potenza per emittenti già in servizio, e che la probabilità di disturbo nocivo per i servizi di sicurezza è notevolmente accresciuta.

Tenendo conto:

delle disposizioni dei numeri 116 e 117 del regolamento di radiocomunicazioni.

Decide:

- 1. a partire dalla data della firma degli atti finali della presente Conferenza, nuove emittenti di radiodiffusione ad onde kilometriche non saranno attivate e che le caratteristiche delle attuali assegnazioni in onde kilometriche non saranno modificate prima che la Conferenza amministrativa mondiale di radiocomunicazioni del 1979 non abbia deciso sulle attribuzioni di bande d'onde kilometriche tra 1 servizi di radiocomunicazione interessati;
- 2. che, nondimeno, nel caso che tali modifiche o aggiunte non aumenteranno le possibilità di disturbo nocivo alle assegnazioni di altri servizi di radiocomunicazione, esse potranno essere attivate;
- 3. che nel caso in cui tali modifiche o aggiunte aumentassero le probabilità di disturbo nocivo alle assegnazioni di altri servizi di radiocomunicazione, esse non potranno essere attivate se non con l'accordo delle amministrazioni a nome delle quali le assegnazioni di frequenza a queste stazioni, conformi alla tavola d'attribuzione di frequenze, sono iscritte nello schedario di registrazione;
- 4. che, conviene demandare alle amministrazioni dei membri contraenti di portare la presente risoluzione a conoscenza degli organi competenti degli altri servizi di radiocomunicazione dei loro rispettivi Paesi e di raccomandare loro di astenersi nella misura del possibile dal mettere in opera nuove stazioni suscettibili di causare disturbi nocivi a stazioni di radiodiffusione funzionanti in conformità al quadro d'attribuzione delle bande di frequenza attendendo le decisioni che potrà prendere la Conferenza amministrativa mondiale di radiocomunicazioni del 1979 in merito all'utilizzazione di bande di frequenze divise.

Incarica il segretario generale:

di portare la presente risoluzione e la raccomandazione n. 2 alla conoscenza di tutte le amministrazioni.

Risoluzione n. 8 · relativa all'utilizzazione di sistemi di modulazione che permettano un'economia di larghezza di banda.

La Conferenza amministrativa regionale di radiodiffusione ad onde kilometriche ed hectometriche (regioni 1 e 3) Ginevra 1975.

Considerando:

- a) che l'applicazione di sistemi di modulazione che permettono un'economia di larghezza di banda, porterebbe ad un'utilizzazione più efficace delle bande d'onde kilometriche ed hectometriche;
- b) che, l'adozione di tali sistemi porrà problemi riguardanti le emittenti, le riceventi e le pianificazioni delle frequenze.

Invita il C.C.I.R.:

ad accelerare i suoi studi di metodi di modulazione che permettano un'economia di larghezza di banda, riferendosi in particolare ad aspetti tecnici e di esercizio della modulazione a banda laterale unica o a bande laterali indipendenti, tenendo conto dei problemi di compatibilità con le riceventi esistenti.

Decide:

- 1. che le stazioni di radiodiffusione possono utilizzare provvisoriamente procedure di modulazione che permettono un'economia di larghezza di banda, a condizione che il disturbo causato negli stessi canali o in canali adiacenti, non superi il disturbo causato dall'applicazione della modulazione a doppia banda laterale portante completa (A 3):
- 2. che ogni amministrazione che pensa di utilizzare queste classi di emissione ricerchi l'accordo di ogni amministrazione interessata applicando la procedura dell'art. 4 dell'accordo.

Risoluzione n. 9 - relativa ai Paesi membri non rappresentati alla Conferenza ed ai Paesi non membri.

La Conferenza amministrativa regionale di radiodiffusione ad onde kilometrice ed hectometrice (regioni 1 e 3) Ginevra 1975.

Considerando:

- a) le disposizioni della risoluzione n. 31 della Conferenza di plenipotenziari (Malaga-Torremolinos, 1973) che esclude il Governo della Repubblica sudafricana dalla Conferenza dei plenipotenziari e da tutte le altre Conferenze e riunioni dell'Unione internazionale delle telecomunicazioni;
 - b) la situazione dei Paesi membri o non membri assenti dalla Conferenza;
- c) le risoluzioni e disposizioni adottate dalla Conferenza per apportare una soluzione adeguata ai differenti problemi di questi Paesi nei riguardi dell'accordo del piano ivi allegato.

Decide

che le disposizioni e risoluzioni adottate dalla Conferenza in favore dei Paesi membri o non membri assenti dalla Conferenza non saranno applicate al Governo della Repubblica sudafricana.

Raccomandazione n. 1 - relativa al miglioramento del piano.

La Conferenza amministrativa regionale di radiodiffusione ad onde kilometriche ed hectometriche (regioni 1 e 3), Ginevra 1975.

Notando:

che la Conferenza non ha raggiunto risultati soddisfacenti per tutti i Paesi a causa del numero eccessivo di domande di frequenza.

Considerando:

che di conseguenza non può essere possibile soddisfare conformemente ai criteri adottati tanto alla prima che alla seconda sessione della Conferenza, i bisogni giustificati di certi Paesi segnatamente di Paesi in via di sviluppo e di Paesi dove si presentano condizioni particolari.

Raccomanda:

- 1. che, le amministrazioni proseguono dopo la Conferenza negoziati bilaterali e multilaterali allo scopo di migliorare la situazione dei servizi di radiodiffusione nelle bande di onde hectometriche e kilometriche, segnatamente con mutue concessioni e dalla riduzione di comune accordo delle assegnazioni iscritte nel piano nelle regioni in cui il campo utilizzabile resti molto elevato;
- 2. che, a tal fine, l'UIT accordi alle amministrazioni che lo domandino l'assistenza necessaria conformemente alle disposizioni della convenzione.

Raccomandazione n. 2 - relativa alla divisione della banda di frequenze delle onde kilometriche tra il servizio di radiodiffusione ed altri servizi di radiocomunicazione (regione 1).

La Conferenza amministrativa regionale di radiodiffusione ad onde kilometriche ed hectometriche (regioni 1 e 3), Ginevra 1975.

Notando:

- a) che, in una parte della regione 1, la divisione, sulla base dell'eguaglianza dei diritti, della banda 255-285 kHz tra il servizio di radiodiffusione ed il servizio di radionavigazione aereonuatica si traduce di fatto con interferenze nocive alle radiofasi aeronautiche;
- b) che, il servizio di radionavigazione aeronautica è un servizio di sicurezza (n. 69 del regolamento di radiocomunicazioni) la cui protezione efficace contro queste interferenze dannose è indispensabile alla salvaguardia della vita umana.

Considerando:

che converrà evitare l'attribuzione di bande suddivise tra il servizio di radiodiffusione e di altri servizi quali il servizio mobile marittimo ed il servizio di radionavigazione aeronautica.

Raccomanda:

alla Conferenza amministrativa mondiale delle radiocomunicazioni del 1979 d'esaminare tale questione tenendo conto dei rispettivi interessi dei servizi interessati.

Raccomandazione n. 3 - relativa ai metodi di previsione della propagazione dell'onda ionosferica.

La Conferenza amministrativa regionale di radiodiffusione ad onde kilometriche ed hectometriche (regioni 1 e 3) Ginevra 1975.

Considerando:

che i metodi di previsione della propagazione dell'onda ionosferica utilizzati al momento della definizione del piano possono essere migliorati in avvenire.

Raccomanda alle amministrazioni:

d'utilizzare al momento dei loro negoziati bilaterali relativi alle modifiche al piano, i metodi più recenti adottati dal C.C.I.R. per la previsione della propagazione dell'onda ionosferica ad ogni altro metodo scelto di comune accordo.

Raccomundazione n. 4 - relativa alla convocazione di una conferenza competente incaricata della revisione dell'accordo regionale relativo all'utilizzazione da parte del servizio di radiodiffusione di frequenze nelle bande delle onde hectometriche nelle regioni 1 e 3 e nelle bande delle onde kilometriche della regione 1.

La Conferenza amministrativa regionale di radiodiffusione ad onde kilometriche ed hectometriche (regioni 1 e 3) Ginevra 1975.

Considerando.

- a) l'evoluzione rapida delle tecnologie della radiodiffusione;
- b) i bisogni futuri dei Paesi in via di sviluppo, che possono essere importanti tanto nelle bande di onde kilometriche che in quelle hectometriche, al fine che questi Paesi possono soddisfare alle esigenze dei loro servizi nazionali di radiodiffusione;
- c) che non è stato possibile includere in modo soddisfacente a lungo termine le domande di frequenze che sono state presentate nelle bande d'onde kilometriche ed hectometriche attribuite al servizio di radiodiffusione ad onde kilometriche ed hectometriche;
- d) che, in conseguenza, l'accordo è stato stabilito sulla base dei bisogni formulati per i prossimi 14 anni e che è di conseguenza assolutamente necessario rivederlo il più presto possibile una volta trascorso questo periodo.

Raccomanda al consiglio d'amministrazione:

di prevedere la riunione, nel 1989, di una conferenza competente incaricata di revisionare l'accordo, salvo che non si renda necessario convocare, conformemente alle disposizioni della convenzione, una tale conferenza ad una data più ravvicinata.

Raccomandazione n. 5 - relativa alla pubblicazione di un manuale di diagrammi di trasmissione d'antenne direttive utilizzabili per il servizio di radiodiffusione.

La Conferenza amministrativa regionale di radiodiffusione ad onde kilometriche ed hectometriche (regioni 1 e 3) Ginevra 1975.

Considerando

- on che i criteri di calcolo adottati dalla Conferenza contenuti nell'essenziale nell'allegato e all'accordo, presuppongono la conoscenza del guadagno dell'antenna nella direzione di propagazione;
- b) che è utile disporre di dati aggiornati sulle caratteristiche delle antenne di radiodiffusione ad onde kilometriche ed hectometriche;
- c) che il segretariato specializzato del C.C.I.R., in accordo con l'Avis 414 e la risoluzione 59 del C.C.I.R., sta preparando un manuale di diagrammi di trasmissione di antenne direttive utilizzabili per il servizio di radiodiffusione ad onde kilometriche ed hectometriche;
- d) che è utile poter disporre di valori misurati di diagrammi di trasmissioni d'antenna per confrontarlo con i diagrammi di trasmissione calcolata.

Raccomanda:

che le amministrazioni comunichino al direttore del C.C.I.R. tutti i risultati delle misure di cui esse dispongono.

ANTONIO SESSA, direttore

DINO EGIDIO MARTINA, redattore

(8651026/1) Roma - Istituto Poligrafico dello Stato - S.
